
CONTENTS

CHAPTER 1

INTRODUCTION AND REVIEW 1

1.1	Some important terminology	2
1.2	Hypothesis testing	5
1.3	Estimation	14
1.4	Measurement scales	16
1.5	Nonparametric statistics	18
1.6	Availability and use of computer programs in nonparametric statistical analysis	21
1.7	Scope of this book	22
1.8	Format and organization	23
	References	24

CHAPTER 2

PROCEDURES THAT UTILIZE DATA FROM A SINGLE SAMPLE 31

2.1	Making inferences about a location parameter	32
2.2	Making inferences about a population proportion	56
2.3	One-sample runs test for randomness	63
2.4	Cox–Stuart test for trend	68
2.5	Computer programs	73
	Review exercises	73
	References	76

CHAPTER 3**PROCEDURES THAT UTILIZE DATA FROM TWO INDEPENDENT SAMPLES 82**

3.1	Making inferences about the difference between two location parameters	83
3.2	Making inferences about the equality of two dispersion parameters	102
3.3	Some miscellaneous two-sample tests	113
3.4	Computer programs	125
	Review exercises	127
	References	134

CHAPTER 4**PROCEDURES THAT UTILIZE DATA FROM TWO RELATED SAMPLES 144**

4.1	Procedures for testing hypotheses about location parameters	145
4.2	Confidence interval procedures for the median difference	155
4.3	Test for two related samples when data consist of frequencies	162
4.4	Computer programs	168
	Review exercises	168
	References	174

CHAPTER 5**CHI-SQUARE TESTS OF INDEPENDENCE AND HOMOGENEITY 178**

5.1	Mathematical properties of the chi-square distribution	179
5.2	Chi-square test of independence	181
5.3	Chi-square test of homogeneity	192
5.4	Miscellany	203
5.5	Computer programs	208
	Review exercises	209
	References	212

CHAPTER 6**PROCEDURES THAT UTILIZE DATA FROM THREE OR MORE
INDEPENDENT SAMPLES 220**

6.1	Extension of the median test	221
6.2	Kruskal–Wallis one-way analysis of variance by ranks	226
6.3	Jonckheere–Terpstra test for ordered alternatives	234
6.4	Multiple comparisons	240
6.5	Computer programs	249
	Review exercises	250
	References	255

CHAPTER 7**PROCEDURES THAT UTILIZE DATA FROM THREE OR MORE
RELATED SAMPLES 261**

7.1	Friedman two-way analysis of variance by ranks	262
7.2	Multiple-comparison procedure for use with Friedman test	274
7.3	Page's test for ordered alternatives	279
7.4	Durbin test for incomplete block designs	284
7.5	Cochran's test for related observations	290
7.6	Computer programs	293
	Review exercises	295
	References	299

CHAPTER 8**GOODNESS-OF-FIT TESTS 305**

8.1	Chi-square goodness-of-fit test	306
8.2	Kolmogorov–Smirnov one-sample test	319
8.3	Kolmogorov–Smirnov two-sample test	330
8.4	Confidence band for the population distribution function	341
8.5	Chi-square and Kolmogorov–Smirnov goodness-of-fit tests: a comparison	343
8.6	Other goodness-of-fit tests	344
8.7	Computer programs	346
	Review exercises	346
	References	349

CHAPTER 9**RANK CORRELATION AND OTHER MEASURES OF ASSOCIATION 356**

9.1	Spearman rank correlation coefficient	358
9.2	Kendall's tau	365
9.3	Confidence interval for τ	377
9.4	Olmstead–Tukey corner test of association	381
9.5	Kendall's coefficient of concordance W	386
9.6	Partial rank correlation	395
9.7	Measures of association for contingency tables	400
9.8	Other measures of association	409
9.9	Computer programs	414
	Review exercises	414
	References	418

CHAPTER 10**SIMPLE LINEAR REGRESSION ANALYSIS 426**

10.1	Fitting the regression line	427
10.2	Testing hypotheses about α and β	431
10.3	Confidence interval for slope coefficient	442
10.4	Test for parallelism of two regression lines	444
10.5	Estimator and confidence interval for difference between slope parameters	455
10.6	Computer programs	458
	Review exercises	458
	References	460

APPENDIX: TABLES 465

SOLUTIONS TO ODD-NUMBERED EXERCISES 583

INDEX 631
