|-----|--|----|
| 1. | <u>INTRODUCTION</u> | 1 |
| 2. | <u>RECURSIVE ESTIMATION : A TUTORIAL INTRODUCTION</u> | 9 |
| 2.1 | Recursive Estimation of the Mean Value of a Random Variable | 10 |
| 2.2 | Recursive Least Squares Estimation for a Single Unknown Parameter in a Regression Relationship | 17 |
| 2.3 | Summary | 23 |
| 3. | <u>RECURSIVE ESTIMATION AND STOCHASTIC APPROXIMATION</u> | 24 |
| 3.1 | The Recursive Least Squares Algorithm | 24 |
| 3.2 | Connection with Stochastic Approximation | 30 |
| 3.3 | Some Extensions to Stochastic Approximation | 37 |
| | . Matrix gain SA and optimum algorithms | 37 |
| | . Continuous-time algorithms | 39 |
| | . Search algorithms | 40 |
| | . Acceleration of convergence | 40 |
| 3.4 | Summary | 41 |
| 4. | <u>RECURSIVE LEAST SQUARES REGRESSION ANALYSIS</u> | 42 |
| 4.1 | The RLS Algorithm for the General Linear Regression Model | 42 |
| 4.2 | Some Cautionary Comments : Multiple Collinearity and Errors-in-Variables | 49 |
| | . Multiple collinearity | 50 |
| | . Errors-in-variables and the structural model | 51 |
| 4.3 | Summary | 54 |
| 5. | <u>RECURSIVE ESTIMATION OF TIME-VARIABLE PARAMETERS IN REGRESSION MODELS</u> | 55 |
| 5.1 | Shaping the Memory of the Estimator | 57 |
| | . The moving rectangular window | 58 |
| | . The moving exponential window (exponential forgetting factor) | 60 |
| 5.2 | Modelling the Parameter Variations | 66 |

| | | |
|-----|---|-----|
| 5.3 | Vector Measurements and the Kalman Filter- Estimation Algorithm | 75 |
| | . Estimation of the varying mean value for Walgett rainfall data | 82 |
| 5.4 | The Estimation of Rapidly Varying Parameters | 84 |
| | . Simple parameter decomposition | 84 |
| | . A practical example : Missile parameter estimation | 86 |
| | . More complex methods | 92 |
| 5.5 | Simplified 'Constant Gain' Algorithms for Time Variable Parameter Estimation | 94 |
| 5.6 | Recursive Smoothing Algorithms | 96 |
| 5.7 | Statistical Methods for Detecting the Presence of Parameter Variation | 98 |
| 5.8 | Summary | 102 |
| 6. | <u>THE TIME-SERIES ESTIMATION PROBLEM</u> | 104 |
| 6.1 | The Time-Series Model in the Observation Space | 105 |
| 6.2 | Various Observation Space Model Forms | 109 |
| 6.3 | Least Squares Estimation : Its Advantages and Limitations | 118 |
| 6.4 | Least Squares Estimation : A Special Case | 123 |
| 6.5 | The General Case : The Structural Model | 125 |
| 6.6 | Summary | 128 |
| 7. | <u>THE INSTRUMENTAL VARIABLE (IV) METHOD OF TIME-SERIES ANALYSIS</u> | 129 |
| 7.1 | The Recursive IV Algorithm for Time-Series Models | 130 |
| 7.2 | The Recursive-Iterative IV Algorithm | 134 |
| 7.3 | Estimation of the Noise Model Parameters : the AML Method | 137 |
| 7.4 | Statistical Properties of the IV and AML Estimates | 141 |
| | . IV estimates | 141 |
| | . AML estimates | 142 |
| 7.5 | Convergence of the IV and AML Estimators | 143 |

| | | |
|------|---|-----|
| 7.6 | Identifiability and the Choice of Input Signals | 143 |
| | . A special case | 144 |
| | . Choice of input signals | 146 |
| | . Restrictions on the system to be identified | 147 |
| | . The general case | 148 |
| | . Noise process identifiability | 149 |
| | . Some concluding comments on identifiability | 149 |
| 7.7 | Parametric Variations | 150 |
| 7.8 | A Time-Series Analysis Procedure Based on IV-AML Estimation | 151 |
| 7.9 | Representative Practical Results | 152 |
| | . The gas furnace data of Box-Jenkins | 152 |
| | . Rainfall-runoff modeling for the Bedford- Ouse River Basin | 157 |
| 7.10 | Summary | 166 |
| 8. | <u>OPTIMUM INSTRUMENTAL VARIABLE METHODS OF TIME-SERIES MODEL ESTIMATION</u> | 168 |
| 8.1 | The Maximum-Likelihood Method | 168 |
| 8.2 | IV Within the Context of Maximum Likelihood | 170 |
| 8.3 | The AML Method Within the Context of Maximum Likelihood | 173 |
| 8.4 | A Refined Recursive IV-AML Approach to Time- Series Analysis | 175 |
| 8.5 | The Statistical Properties of the Refined IVAML Estimates | 184 |
| 8.6 | Performance of the Refined IVAML Algorithms | 185 |
| 8.7 | A Practical Example : Analysis of Time-Series Tracer Data in Translocation Studies | 195 |
| 8.8 | The Optimum Generalized Equation Error (OGEE) Approach to Time-Series Analysis | 198 |
| | . For various common time-series model forms | 198 |
| | . For a multiple input, single output (MISO) system model | 198 |
| 8.9 | Summary | 203 |
| 9. | <u>ALTERNATIVE RECURSIVE APPROACHES TO TIME-SERIES ANALYSIS</u> | 205 |
| 9.1 | Prediction Error (PE) Methods | 205 |
| | . Statistical Properties of PE Estimates for the Transfer Function (TF) Model | 213 |

| | | |
|------------|--|-----|
| 9.2 | The Extended Kalman Filter | 215 |
| | . A practical example : stochastic-dynamic model for water quality in the Bedford-Ouse River | 222 |
| 9.3 | Maximum Likelihood Estimation in the State Space | 226 |
| 9.4 | Summary | 228 |
| 10. | <u>RECURSIVE ESTIMATION : A GENERAL TOOL IN DATA ANALYSIS AND STOCHASTIC MODEL BUILDING</u> | 231 |
| 10.1 | Pre-processing of Time-Series Data | 231 |
| 10.2 | Model Structure Identification | 233 |
| 10.3 | Model Parameter Estimation | 234 |
| 10.4 | State Estimation | 235 |
| 10.5 | Self-Adaptive (or Self-Tuning) Estimation, Forecasting and Control | 238 |
| 10.6 | Summary | 239 |
| 11. | <u>EPILOGUE</u> | 241 |
| APPENDIX 1 | <u>RELEVANT MATHEMATICAL AND STATISTICAL BACKGROUND MATERIAL</u> | 245 |
| A.1.1 | <u>Matrix Algebra</u> | 245 |
| | 1. Matrices | 245 |
| | 2. Vectors | 246 |
| | 3. Matrix Addition (or Subtraction) | 246 |
| | 4. Matrix or Vector Transpose | 246 |
| | 5. Matrix Multiplication | 247 |
| | 6. Determinant of a Matrix | 248 |
| | 7. Partitioned Matrices | 249 |
| | 8. Inverse of a Matrix | 250 |
| | 9. Quadratic Forms | 251 |
| | 10. Positive Definite or Semi-Definite Matrices | 252 |
| | 11. The Rank of a Matrix | 252 |
| | 12. Differentiation of Vectors and Matrices | 253 |
| A.1.2 | <u>Statistics and Probability</u> | 254 |
| | 1. Discrete Random Variables | 254 |
| | . Mean value | |
| | . Variance | |

| | | |
|-------|--|-----|
| 2. | Discrete Random Vectors | 255 |
| | . Joint probability mass function | |
| | . Marginal probability mass function | |
| | . Mean | |
| | . Covariance Matrix | |
| 3. | Conditional Probabilities | 256 |
| | . Conditional probability mass function | |
| 4. | Continuous Random Variables and Vectors | 256 |
| | . Probability Density Function | |
| 5. | The Normal or Gaussian Density Function | 257 |
| | . Normally distributed random variable (scalar) | |
| | . Normally distributed random vector | |
| 6. | Properties of Estimators | 258 |
| | . Unbiased | |
| | . Asymptotically unbiased | |
| | . Minimum variance, unbiased estimators | |
| | . Probability-in-the-limit (p.lim) | |
| 7. | The Likelihood Function and Maximum Likelihood Estimation | 259 |
| | . Hessian matrix | |
| 8. | The Cramer-Rao Lower Bound | 261 |
| | . Information matrix | |
| 9. | Time-Series | 261 |
| | . Mean and variance | |
| | . Covariance and correlation | |
| | . Covariance matrix | |
| | . White noise | |
| 10. | Gauss-Markov Random Sequences | 263 |
| | . Conditional probability density function | |
| | . Joint probability density function | |
| A.1.3 | <u>Simple Deterministic Dynamic Systems</u> | 264 |
| 1. | First Order, Continuous-Time Linear Dynamic System | 264 |
| | . Time-constant | |
| | . Steady-state gain | |
| 2. | First Order Discrete-Time Linear Dynamic System | 264 |

| | |
|---|-----|
| 3. The Discrete-Time State Space Representation of a Deterministic Dynamic System | 265 |
| 4. Transfer Function Representation of a Single Input, Single Output (SISO) Discrete Dynamic System | 266 |
| 5. The Infinite Dimensional, Impulse Response Representation of a Linear SISO Discrete Dynamic System | 267 |
| 6. Differentiation of a TF with respect to a Given Parameter | 268 |

| | |
|---|-----|
| <u>APPENDIX 2 GAUSS'S DERIVATION OF RECURSIVE LEAST SQUARES</u> | 270 |
|---|-----|

| | |
|---|-----|
| <u>APPENDIX 3 THE INSTANTANEOUS COST FUNCTION ASSOCIATED WITH THE RECURSIVE LEAST SQUARES ALGORITHM</u> | 278 |
|---|-----|
