Contents

PART I COMPARATIVE STUDIES AND DESIGNED EXPERIMENTS 1

1. Introduction 3

1.1 Comparative Studies and Designed Experiments, 3
1.2 Programming Systems, 4
1.3 Least Squares and Analysis of Variance, 5
1.4 Interpretation of Design Specifications, 6
1.5 Analysis of Designed Experiments, 7

2. Simple Designed Experiments 9

2.1 Principles of Designed Experiments, 10
2.2 The One-Way Design, 12
2.3 The Blocked Design, 18
2.4 The Crossed Design, 26
2.5 The Nested Design, 30
2.6 Comparison, 38
2.7 Exercises, 40

PART II PROGRAMMING SYSTEMS 41

3. User-level Considerations 43

3.1 Program Behavior, 44
3.2 User Documentation, 50
3.3 Aids to Interaction, 51
3.4 Input and Output Files, 53
3.5 Text Editors, 54
3.6 Testing of Programs, 55
3.7 Exercises, 61

4. Design of Individual Programs 62

4.1 Programming Style, 63
4.2 Documentation, 71
4.3 Host Language, 72
4.4 Exercises, 74

5. Construction of Program Systems 75

5.1 Programming Conventions, 76
5.2 Modularity, 77
5.3 Subroutine Communication, 78
5.4 Programs Larger Than Available Computer Memory, 85
5.5 Portability, 91
5.6 Extensibility, 94
5.7 Error Handling, 96
5.8 Maintenance, 100
5.9 Exercises, 101

PART III LEAST SQUARES AND ANALYSIS OF VARIANCE 103

6. Projection and the Least Squares Method 105

6.1 Individual Space, 106
6.2 Variable Space—Sample Mean, 107
6.3 Projections and Projection Matrices, 110
6.4 Sample Mean—Continued, 114
6.5 Algebra and Geometry of Projection, 115
6.6 Programs for Projection, 123
6.7 Construction of an Orthogonal Set of Basis Vectors, 126
6.8 Exercises, 134
Programs, 134

7. Geometry of Hypothesis Testing 150

7.1 Dual Space Geometry of z-, t-, and F-Tests, 150
7.2 Comparisons of Cell Means, 161
7.3 n-Dimensional Geometry of Power, 164
7.4 Exercises, 166

8. Algorithm Description—Wilkinson's SWEEP 169

8.1 The Row and Column Algorithm for Two-Factor Data, 172
8.2 The Row and Column Algorithm for Column Vectors, 178

8.3 Wilkinson's SWEEP and Least Squares, 182
8.4 Balanced Designs with More Than Two Factors, 185
8.5 Programs for Wilkinson's SWEEP, 198
8.6 Exercises, 203
Programs, 204

9. Algorithm Description—Beaton's SWP 212

9.1 Algebraic Definition and Properties, 214
9.2 Application of SWP to Regression, 223
9.3 Numerical Analysis of SWP for Grand Mean, 230
9.4 Variable Space—Geometry of Regression of Y on X, 236
9.5 Regression, Projection, and SWP, 238
9.6 SWP and ANOVA, 244
9.7 Programs for SWP, 249
9.8 Exercises, 251
Programs, 252

10. Yates' Algorithm for Factorial Designs 258

10.1 Two-Sample t-Test (2^1 Design), 259
10.2 Notation for Factors and Effects in 2^n Design, 262
10.3 2^2 Design, 263
10.4 Yates' Algorithm for 2^n Designs, 266
10.5 Extension to Other Designs, 278
10.6 Programs for Yates' Algorithm, 282
10.7 Design Specification for Factorial Designs, 288
10.8 Exercises, 290
Programs, 291

11. Matrix Decompositions 294

11.1 Triangular Coordinates, 296
11.2 The Householder Reflection, 301
11.3 Least Squares Problems by QR, 312
11.4 The Cholesky Factorization, 317
11.5 Gaussian Elimination and the LU Factorization, 319
11.6 Diagonalization, 329
11.7 Programs, 337
11.8 Exercises, 342
Programs, 343

PART IV INTERPRETATION OF DESIGN SPECIFICATIONS 355

12. Algebra of Design Specification Statements 357

12.1 Algebra of Design Statements, 358
12.2 Expansion of the Design Statement, 379
12.3 Generation of Dummy Variables, 388
12.4 Alternate Design Specification Schemes, 390
12.5 Exercises, 395
Programs, 395

13. Grammar for Design Specification Statements 401

13.1 Design Specification Grammar, 402
13.2 Grammars for Algebra, 409
13.3 Compilation of ANOVA Design Specification Statements, 414
13.4 Evaluation of Compiled Design Specification Statements, 424
13.5 Exercises, 428

14. Programs for Compilation of Design Specification Statements 429

14.1 Programming Detail, 430
14.2 Language Dependent Programming Detail, 438
14.3 Examples of Program Execution, 447
14.4 Exercises, 451
Programs, 453

PART V ANALYSIS OF DESIGNED EXPERIMENTS 483

15. Specification of Hypothesis Tests for Designed Experiments 485

15.1 Expected Values of Cell Means, 487
15.2 Classes of Design Statements, 487
15.3 Geometry, 489
15.4 Analysis Sequence, 491
15.5 Example: Randomized Blocks Design, 492
15.6 Example: Split-Plot Design, 495
15.7 Other Classification Schemes for Effects, 501
15.8 Specification of Tests by Statistical Packages, 513
15.9 Exercises, 515
Programs, 515

16. Blocking and Confounding 520

16.1 The 2^3 Design and Complete Blocks, 522
16.2 Incomplete Blocks, 526
16.3 Information and Relative Efficiency, 538
16.4 Specification and Detection of Confounding, 544
16.5 Detection of Confounding by Wilkinson SWEEP, 546
16.6 Detection of Confounding by SWP, 558
16.7 Comparison of Algorithms, 564
16.8 Exercises, 564

17. Analysis of Covariance 565

17.1 Standard Geometry of ANCOVA, 566
17.2 *n*-Dimensional Geometry of Covariance Analysis, 577
17.3 Efficiency of Covariance Adjustment, 586
17.4 Multiple Strata, Multiple Effects, and Multiple Covariates, 589
17.5 Exercises, 592

18. Generally Balanced Designs 594

18.1 Latin Squares, 596
18.2 Residual Effects Designs, 601
18.3 Confounded Factorial Designs, 611
18.4 Incomplete Block Designs, 614
18.5 Randomized Blocks with Additional Replication of Control, 632
18.6 Exercises, 649

Appendix: Description of Floppy Disk 652

READ.ME, 652
Annotated Directory, 656
