CONTENTS

Contributors *ix*
Preface *xi*

Introduction to the Papers 1
David F. Findley

The Step from One to Higher Dimensional Signal Processing —Case Histories 21
James H. Justice

High Resolution 2-Dimensional Power Spectral Estimation 71
Tad J. Ulrych and Colin J. Walker

Time Series Analysis of Geophysical Inverse Scattering Problems 101
Enders A. Robinson

On the Use of the Fourier Transforms to Image Seismic Reflection Data 169
Gerald H. F. Gardner

Estimating the Earth's Impedence Function When There Is Noise in the Electric and Magnetic Signals 189
Clarence S. Clay and Melvin J. Hinich

Nearest Neighbor Rule Classification of Stationary and Nonstationary Time Series 221
Will Gersch

Time Domain Considerations in Optimal Estimation for Bandlimited Signals 271
Thomas W. Parks and Dean P. Kolba

Lattice Methods in Spectral Estimation 301
John Makhoul

Geometrical and Lattice Versions of Levinson's General Algorithm 327
David F. Findley

Order Selection for Lowpass IIR Filters 355
J. Bee Bednar and William A. Coberly

Application of S-Arrays to Seasonal Data 379
Henry L. Gray and Wayne A. Woodward

Time Series Model Identification and Prediction Variance Horizon 415
Emanuel Parzen

Recursive Estimation and Adaptive Forecasting in ARIMA Models with Time Varying Coefficients 449
Johannes Ledolter

A Time Series Case Study from Biology: Some Interplay between Theory and Practice 473
O. D. Anderson

On TIMSAC-78 499
Genshiro Kitagawa and Hirotugu Akaike

Phase-Sensitive Deconvolution to Model Random Processes, with Special Reference to Astronomical Data 549
Jeffrey D. Scargle

On Minimum Entropy Deconvolution 565
David L. Donoho

Estimation for Stationary Time Series When Data Are Irregularly Spaced or Missing 609
William Dunsmuir

Fitting a Continous Time Autoregression to Discrete Data 651
Richard H. Jones

Robust Methods for Time Series 683
R. Douglas Martin

Robust Forecasting 761
David B. Preston

Index 795
