CHAPTER 1 INTRODUCTION	1
CHAPTER 2 PROBABILITY	5
1. Some basic definitions	5
2. Independence and conditional probability	8
3. The discrete uniform probability model	9
CHAPTER 3 RANDOM VARIABLES AND SAMPLING DISTRIBUTIONS	11
1. Density function	12
2. Distribution function	16
3. Expectation	18
4. Sampling distribution	26
CHAPTER 4 SOME IMPORTANT PROBABILITY DISTRIBUTIONS	30
1. The binomial distribution	30
2. The Poisson distribution	35
3. The Poisson process	40
4. The exponential distribution	43
5. The gamma distribution	45
6. The normal distribution	49
7. The chi-squared distribution	57
8. Student's t distribution	59
9. The F distribution	60
10. Distribution of \bar{X} and s^2 etc. in the normal case	62
CHAPTER 5 ESTIMATION	64
1. The histogram	64
2. The cumulative frequency function	66
3. Estimators	67
4. Some methods of estimation	71
5. Estimation of the mean and variance of a function	86
6. Deterministic and statistical errors due to rounding-off errors	90

	page
CHAPTER 6 CONFIDENCE INTERVALS	93
1. Interval for mean	94
2. Interval for difference of two means	99
3. Intervals from large samples of binomially distributed data	107
4. Interval for a variance when the observations are normally distributed	110
5. Approximate interval for a function	111
CHAPTER 7 HYPOTHESIS TESTING	112
1. Null and alternative hypotheses	112
2. Tests	113
3. Type I and type II errors	117
4. Correspondence with confidence interval	121
5. Post-test estimation	122
CHAPTER 8 TESTS ON MEANS	126
1. Tests on the mean of a single sample	126
2. Tests between means drawn from two samples	132
3. Tests on proportions	140
4. Nonparametric tests	142
5. Tests between several means	149
CHAPTER 9 TESTS ON VARIANCES	163
1. Test on a single variance	163
2. Test on variances from two distributions	164
3. Comparison of several variances	167
4. Variance stabilization	172
CHAPTER 10 GOODNESS OF FIT TESTS	174
1. The chi-squared test	174
2. Contingency tables	181
3. The problem of outliers	185
CHAPTER 11 CORRELATION	189
1. Sample and distribution correlation coefficients	191
2. The joint normal density of X and Y	192

	page
CHAPTER 12 THE STRAIGHT LINE THROUGH THE ORIGIN OR THROUGH SOME OTHER FIXED POINT	198
1. Change of origin	199
2. Some remarks on notation	200
3. Formal statement of the first model	201
4. Estimation using the method of least squares	202
5. Formal statement of the second model	210
6. Estimation using the method of least squares	211
7. Sampling distributions assuming the normality of the data	215
8. Confidence intervals for β_1 and μ	216
9. Tests of a number of hypotheses	217
 CHAPTER 13 THE POLYNOMIAL THROUGH THE ORIGIN OR THROUGH SOME OTHER FIXED POINT	 236
1. Formal statement of the model	236
2. Estimation using the method of least squares	237
3. Orthogonal polynomials in x	239
4. Reformulation of the model	240
5. Estimation using the method of least squares	242
6. Return to the original polynomial $\hat{\mu} = \sum \beta_p x^p$	250
7. A modification of the model	253
8. Sampling distributions assuming the normality of the data	255
9. Calculation of confidence intervals for $\{\alpha_p\}$, $\{\beta_p\}$ and μ	256
10. Tests of a number of hypotheses	257
11. Consistency of future experiments	268
 CHAPTER 14 THE GENERAL STRAIGHT LINE	 281
1. Formal statement of the model	281
2. Estimation using the method of least squares	282
3. Estimation using the method of least squares and polynomials $T_0(x)$ and $T_1(x)$	284
4. Sampling distributions assuming the normality of the data	294

	page
5. Calculation of confidence intervals for $\{\alpha_p\}$, $\{\beta_p\}$, and μ	294
6. Tests of a number of hypotheses	295
7. Consistency of future experiments	305
 CHAPTER 15 THE GENERAL POLYNOMIAL	 320
1. Formal statement of the model	320
2. Estimation using the method of least squares	321
3. A look back over the last three chapters	322
4. Estimation using the method of least squares and polynomials $\{T_p(x)\}$, $p = 0, 1, \dots, m$	323
5. Sampling distributions assuming the normality of the data	328
6. Calculation of confidence intervals	329
7. Tests of a number of hypotheses	329
 CHAPTER 16 A BRIEF LOOK AT MULTIPLE REGRESSION	 342
1. The general linear model - hypotheses and least squares estimation	342
2. Some related distribution theory	345
3. The test	347
4. Ordinary weighting	348
 APPENDIX 1 DRAWING A RANDOM SAMPLE USING A TABLE OF RANDOM NUMBERS	 350
 APPENDIX 2 ORTHOGONAL POLYNOMIALS IN x	 352
1. Computation of $\{T_p(x)\}$, $p = 1, 2, \dots, m$	352
2. Computation of $\{T_p(x)\}$, $p = 0, 1, \dots, m$	358
3. Scaling the x values	362
