

TABLE OF CONTENTS

1. INTRODUCTION	1
1.1. History and main contributions	1
1.2. Why robust estimations ?	4
1.3. Summary	6
2. ON SAMPLING DISTRIBUTIONS	8
2.1. Scope of section	8
2.2. Metrics for probability distributions	8
2.3. Definition of robustness, breakdownpoint	11
2.4. Estimators seen as functional of distributions	12
2.5. The influence function of Hampel	15
3. THE JACKKNIFE	17
3.1. Introduction	17
3.2. Jackknife theory	20
3.3. Case study	24
3.4. Comments	28
4. M-ESTIMATORS	30
4.1. Warning	30
4.2. MM-estimators	32
4.3. M-estimators in location and regression	38
4.3.1. Location and regression	38
4.3.2. Least powers	43
4.3.3. Can we expand in Taylor series ?	46
4.3.4. "Best" robust location estimator	49
4.4. MM-estimators in regression estimation	60
4.4.1. Relaxation methods	62
4.4.2. Simultaneous solutions	64
4.4.3. Some proposals	65
4.4.4. Illustration	68
4.5. Solution of fixed point and non-linear equations	72
5. OPEN AVENUES	77
5.1. Estimators seen as functional of distributions	77
5.2. Sample distribution of estimators	78
5.3. Adaptative estimators	80
5.4. Recursive estimators	82

5.5. Other views on robustness	84
6. REFERENCES	88
APPENDIX	100
Consistent estimator	101
Contaminated normal distributions	102
Distribution space	106
Influence function	108
Jackknife technique	109
Prokhorov metric	114
Robustness	118
von Mises derivative	120
AUTHOR INDEX	124
SUBJECT INDEX	129
