TABLE OF CONTENTS

CHAPTER I, OVERVIEW

1. What is (are) Statistics? 1
2. Two Populations 22

CHAPTER II, LOOKING AT A SAMPLE

3. The Order Statistics 24
4. Using a Statistic, or Statistics, to Summarize Data 27

CHAPTER III, GENERALIZING FROM A SAMPLE: ESTIMATION

5. Sampling From a Population or Universe 43
6. What Can You Learn by Looking at One Value 47
7. What Can You Learn From Two Values? Confidence Limits 49
8. The Confidence Level 50
9. More Data, More Confidence 53
10. Closer Limits 60
11. Sample Median Viewed as Point Estimate of a Population Median 69
12. Ready Table of Confidence Limits 71
13. Some Refinements 73
14 Summary 76

CHAPTER IV, GENERALIZING CONTINUED

15. Samples and Populations: Practical Considerations 78
16. Sample Size. Sequential Sampling 87
17. Progress 89
18. One-sided Confidence Interval (At Least That Much) 92
19. Summary 93

CHAPTER V, DEALING WITH A BIG SAMPLE

20. Sample Size. Terminology 94
21. Sorting a Big Sample by Computer 96
22. Normal Approximation Formula for "c" 98
23 Sorting by Stem and Leaf Chart 109
24. Traditional Version: Frequencies, Block Diagram. Interpolation 113

25. Summary 115

CHAPTER VI, BASIC CONCEPTS OF PROBABILITY

26. Sets, Subsets 116
27. What Fraction of the Pie? 123
28. Probability 127
29. What Fraction of the Girls? Conditional Probability 136
30. Independence 141
31. Algebra of Combinations 150
32. Binomial Probabilities 164
33. Life Insurance and the Probability of Dying 175
34. How the Confidence Levels in Table 3a Were Calculated 181
35. Sampling Without Replacement (Finite Population) 184
36. Summary 190

CHAPTER VII, GENERALIZING, CONT'D: HYPOTHESIS TESTING

37. Testing a Hypothetical Value of $\tilde{\mu}$ Against the Sample 194
38. Testing Without First Finding Confidence Limits 203
39. Does Treatment Make Any Difference? 206
40. Two Different Treatments Tried on the Same Individual 214
41. Differences in Matched Pairs 216
42. Comparing Two Measuring Instruments 222
43. One-Tail Tests 225
44. Summary 229

CHAPTER VIII, GENERALIZING FROM TWO SAMPLES

45. Introduction. Easy Method to Estimate $\tilde{\mu}_2 - \tilde{\mu}_1$ (Mathisen) 230
46. Mann-Whitney Test 243
47. Confidence Interval. Graphical Method 251
48. Summary 254

CHAPTER IX, TESTING FOR A DIFFERENCE IN SPREAD

49. Introduction. What is Spread? 255
50. Testing Inequality of Spreads by Comparing Deviations 266
51. Counting How Many Values in One Sample are Outside the Other 272
52. Summary, Other Methods 279

CHAPTER X, MEANS

53. Average, Mean 285
54. A Little Monte Carlo 296
55. Normally Distributed Variables 299
56. Confidence Intervals for μ (Short-Cut t) 302
57. Short-Cut t Test 307
58. Summary 309

CHAPTER XI, THE STANDARD DEVIATION

59. Round-About Means 311
60. Old Fashioned Variance and S.D. 314
61. Population Variance σ^2 and Sample Estimate 322
62. Standardized x 324
63. Summary 333

CHAPTER XII, ABOUT THE NORMAL CURVE

64. Representing Probabilities by Fractions of an Area 335
65. The Standard Normal Curve, N(0,1) 341
66. Normal Curves in Real Life, $N(\mu,\sigma^2)$ 350
67. Looking at a Sample on Normal Probability Paper 354
68. How Sample Means Vary. Central Limit Theorem 359
69. Quality Control Charts 368
70. Another Confidence Interval for μ: z Test 370
71. Student's One-Sample t. 377
72. Test and Interval for Binomial p 382
73. Why the Formula $\frac{1}{2}n - \sqrt{n}$ of Sec. 22 Works 398
74. Summary 399

CHAPTER XIII, DIFFERENCE OF TWO MEANS (Introduction)*

75. Two-Sample z, Variances Known 401
76. Two-Sample z Based on Large Samples. Welch z etc. 407
77. Difference of Two Peas by Normal Approximation 417
78. Fisher Exact Test (Computer Program) 430
79. Summary 433

---

*Continued in Part II

CHAPTER XIV, RELATIONSHIP BETWEEN TWO VARIABLES. INTRODUCTION

80. Association Between Two Attributes 435
81. Relation Between Two Quantities: Comparing Low-x With High-x Group 442
82. Kendall's Correlation Coefficient (Tau) 449
83. Summary 452
84. Chapter Appendix: Some Algebra Related to Sec. 80. 453

CHAPTER XV, RELATIONSHIP, CONT'D: STRAIGHT LINE REGRESSION AND CORRELATION

85. Straight Lines Through the Origin (Y = bX) 455
86. How to Find the Best Fitting Line Through 0 460
87. Generalizing to a Larger Population 466
88. Analytic Geometry of Straight Lines Generally 471
89. Fitting a Straight Line to a Set of Points 477
90. Error Variance 481
91. Generalizing: Testing Null Hypothesis of No Relationship. Confidence Interval for Slope 483
92. Correlation 488
93. Regression When a Variable is "Yes or No" 498
94. Validity and Reliability in Psychological Testing 500
95. Comparing the Lines for Two Populations. 502
96. Summary 509
97. Chapter Appendix: The Algebra Behind the Formulas Used 513

CHAPTER XVI, MORE THAN TWO SAMPLES (Introduction)

98. Two-at-a-Time Comparisons 517
99. Introduction to Analysis of Variance 530
100. Contrasts 542

SUMMARY

101. Summary of the Course 552
