

CONTENTS

Preface ix

Part I Basic Probability and Statistics

Chapter 1	Introduction	3	
1-1	Example	3	
1-2	Deduction and Induction	6	
1-3	Sampling—Why and How	7	
Chapter 2	Descriptive Statistics for Samples		11
2-1	Frequency Tables and Graphs	12	
2-2	Center of a Distribution	14	
2-3	Spread of a Distribution	22	
2-4	Linear Transformations	25	
Chapter 3	Probability	35	
3-1	Introduction	35	
3-2	Outcomes and Their Probabilities		39
3-3	Events and Their Probabilities		42
3-4	Conditional Probability	53	
3-5	Independence	61	
3-6	Other Views of Probability		65
Chapter 4	Probability Distributions		73
4-1	Discrete Random Variables		73
4-2	Mean and Variance	77	
4-3	The Binomial Distribution		82
4-4	Continuous Distributions		88
4-5	The Normal Distribution		91
4-6	A Function of a Random Variable		99
4-7	Notation	101	
Chapter 5	Two Random Variables		109
5-1	Distributions	109	
5-2	A Function of Two Random Variables		118
5-3	Covariance and Correlation	122	
5-4	Linear Combination of Two Random Variables		127
	Review Problems (Chapters 1-5)	136	

Part II Basic Inference: Estimating Means 141

Chapter 6	Sampling	143	
6-1	Random Sampling	143	
6-2	Moments of the Sample Mean	146	
6-3	The Central Limit Theorem	151	
6-4	Sampling Simulation (Monte Carlo)	157	
6-5	0-1 Variables	166	
*6-6	Small-Population Sampling	172	
Chapter 7	Point Estimation	179	
7-1	Populations and Samples	179	
7-2	Desirable Properties of Estimators	180	
*7-3	Consistency	188	
7-4	An Introduction to Nonparametric Estimation	191	
Chapter 8	Interval Estimation	199	
8-1	A Single Mean	199	
8-2	t -Distribution When σ^2 Unknown	207	
8-3	Difference in Two Means, $(\mu_1 - \mu_2)$	212	
8-4	Proportions	223	
8-5	One-Sided Confidence Intervals	231	
*8-6	Variance of a Normal Population	233	
Chapter 9	Hypothesis Testing	241	
9-1	Hypothesis Testing Using Confidence Intervals	241	
9-2	Prob-Value	246	
9-3	Classical Hypothesis Testing	252	
9-4	Classical Tests Reconsidered	258	
*9-5	The β Function and Power Function	263	
9-6	Two-Sided Tests	269	
Chapter 10	Analysis of Variance	277	
10-1	One-Factor Analysis of Variance	277	
*10-2	Confidence Intervals	290	
10-3	Two-Factor Analysis of Variance	299	
	Review Problems (Chapters 6-10)	306	

Part III Regression: Relating Two or More Variables 313

Chapter 11	Fitting a Line	315	
11-1	Introduction	315	
11-2	Possible Criteria for Fitting a Line	318	
11-3	The Least Squares Solution	320	
11-A	Appendix Least Squares Without Calculus	328	

Chapter 12	Regression Theory	331	
12-1	The Mathematical Model	331	
12-2	The Mean and Variance of $\hat{\alpha}$ and $\hat{\beta}$	336	
12-4	The Distribution of $\hat{\beta}$	340	
12-5	Confidence Intervals and Hypothesis Tests for β		342
12-6	Interpolation (Interval Estimates)	347	
12-7	Dangers of Extrapolation	353	
12-8	Concluding Observations	354	
Chapter 13	Multiple Regression	359	
13-1	Introduction	359	
13-2	The Mathematical Model	362	
13-3	Least Squares Estimation	363	
13-4	Multicollinearity	366	
13-5	Confidence Intervals and Statistical Tests		370
13-6	How Many Regressors Should Be Retained?		374
13-7	Interpretation of Regression: "Other Things Being Equal"	378	
13-8	Simple and Multiple Regression Compared		380
13-9	Dummy (0-1) Variables	385	
13-10	Regression and Analysis of Variance		392
13-A	Appendix Lines and Planes, Elementary Geometry		402
Chapter 14	Correlation	407	
14-1	Simple Correlation	407	
14-2	Correlation and Regression	418	
14-3	Partial and Multiple Correlation	431	
Chapter 15	Nonlinear Regression	441	
15-1	Nonlinearity in the Variables, but not the Parameters		442
15-2	Nonlinearity in the Parameters, Requiring a Transformation	446	
15-3	Elasticity	452	
	Review Problems (Chapters 11–15)	459	
	Review Problems (Chapters 1–15)	463	
Part IV Further Topics		469	
Chapter 16	Nonparametric Statistics	471	
16-1	The Sign Test	472	
16-2	Confidence Intervals from Order Statistics		475
16-3	The W Test for Two Samples	481	
16-4	Tests for Randomness	486	
16-5	The Advantages of Nonparametric Tests		491

Chapter 17	Chi-Square Tests	501	
17-1	χ^2 Tests for Goodness of Fit	501	
17-2	Contingency Tables	511	
*17-3	χ^2 Tests of Distribution Shape	516	
Chapter 18	Maximum Likelihood Estimation (MLE)	523	
18-1	MLE for a Proportion π	523	
18-2	MLE of a Normal Mean	529	
18-3	MLE for Normal Regression	531	
18-4	MLE of any Parameter From any Population	535	
18-5	MLE and MME (Method of Moments Estimation)	536	
Chapter 19	Bayesian Inference	539	
19-1	Posterior Probabilities	539	
19-2	Posterior Distribution for a Population Proportion π	545	
19-3	Posterior Distribution for the Mean μ of a Normal Population	552	
19-4	Bayesian Regression	560	
Chapter 20	Bayesian Decision Theory	565	
20-1	Optimal Decisions	565	
*20-2	Point Estimation as a Decision	573	
*20-3	Hypothesis Testing as a Decision	579	
*20-4	MLE and Bayesian Estimation	589	
20-5	Bayesian Methods in Practice	593	
20-A	Appendix Proof of the Posterior Mean of π	599	

Tables	601		
Table I	Common Logarithms	602	
Table II	Random Digits	605	
	Random Normal Numbers, Standardized		606
Table III	Binomial Coefficients, $\binom{n}{s}$	607	
	Binomial Probabilities, Individual		608
	Binomial Probabilities, Cumulative		610
Table IV	Standard Normal Probabilities, Cumulative		612
Table V	Student's t Critical Points	613	
Table VI	χ^2 Critical Points	614	
	Modified χ^2 (G^2) Critical Points		615
Table VII	F Critical Points	616	
Table VIII	Wilcoxin-Mann-Whitney Two-Sample Test		618
Table IX	Durbin-Watson Critical Points	620	
Table X	Interpolating Tables V to VII	622	
	Acknowledgements for Tables	623	
	Answers to Odd-Numbered Problems	625	
Index	643
