

Table of contents

Preface v

Contributors xv

PART I. ASSET PRICING

Ch. 1. Econometric Evaluation of Asset Pricing Models 1

W. E. Ferson and R. Jagannathan

1. Introduction 1
2. Cross-sectional regression methods for testing beta pricing models 3
3. Asset pricing models and stochastic discount factors 10
4. The generalized method of moments 15
5. Model diagnostics 23
6. Conclusions 28
- Appendix 29
- References 30

Ch. 2. Instrumental Variables Estimation of Conditional Beta Pricing Models 35

C. R. Harvey and C. M. Kirby

1. Introduction 35
2. Single beta models 37
3. Models with multiple betas 44
4. Latent variables models 46
5. Generalized method of moments estimation 47
6. Closing remarks 58
- References 58

Ch. 3. Semiparametric Methods for Asset Pricing Models 61

B. N. Lehmann

1. Introduction 61
2. Some relevant aspects of the generalized method of moments (GMM) 62
3. Asset pricing relations and their econometric implications 68
4. Efficiency gains within alternative beta pricing formulations 74
5. Concluding remarks 87
- References 88

PART II. TERM STRUCTURES OF INTEREST RATES

Ch. 4. Modeling the Term Structure 91

A. R. Pagan, A. D. Hall, and V. Martin

1. Introduction 91
2. Characteristics of term structure data 92
3. Models of the term structure 104
4. Conclusion 116
- References 116

PART III. VOLATILITY

Ch. 5. Stochastic Volatility 119

E. Ghysels, A. C. Harvey and E. Renault

1. Introduction 119
2. Volatility in financial markets 120
3. Discrete time models 139
4. Continuous time models 153
5. Statistical inference 167
6. Conclusions 182
- References 183

Ch. 6. Stock Price Volatility 193

S. F. LeRoy

1. Introduction 193
2. Statistical issues 195
3. Dividend-smoothing and non stationarity 198
4. Bubbles 201
5. Time-varying discount rates 203

6. Interpretation	204
7. Conclusion	206
References	207

Ch. 7. GARCH Models of Volatility 209

F. C. Palm

1. Introduction	209
2. GARCH models	210
3. Statistical inference	224
4. Statistical properties	229
5. Conclusions	234
References	235

PART IV. PREDICTION

Ch. 8. Forecast Evaluation and Combination 241

F. X. Diebold and J. A. Lopez

1. Evaluating a single forecast	242
2. Comparing the accuracy of multiple forecasts	247
3. Combining forecasts	252
4. Special topics in evaluating economic and financial forecasts	256
5. Concluding remarks	264
References	265

Ch. 9. Predictable Components in Stock Returns 269

G. Kaul

1. Introduction	269
2. Why predictability	270
3. Predictability of stock returns: The methodology	273
4. Power comparisons	287
5. Conclusion	291
References	292

Ch. 10. Interest Rate Spreads as Predictors of Business Cycles 297

K. Lahiri and J. G. Wang

1. Introduction	297
2. Hamilton's non-linear filter	299
3. Empirical results	301
4. Implications for the monetary transmission mechanism	308

- 5. Conclusion 311
- Acknowledgement 313
- References 313

PART V. ALTERNATIVE PROBABILISTIC MODELS

- Ch. 11. Nonlinear Time Series, Complexity Theory, and Finance 317
- W. A. Brock and P. J. F. de Lima*

- 1. Introduction 317
- 2. Nonlinearity in stock returns 326
- 3. Long memory in stock returns 337
- 4. Asymmetric information structural models and stylized features of stock returns 349
- 5. Concluding remarks 353
- References 353

- Ch. 12. Count Data Models for Financial Data 363
- A. C. Cameron and P. K. Trivedi*

- 1. Introduction 363
- 2. Stochastic process models for count and duration data 366
- 3. Econometric models of counts 371
- 4. Concluding remarks 388
- Acknowledgement 389
- References 390

- Ch. 13. Financial Applications of Stable Distributions 393
- J. H. McCulloch*

- 1. Introduction 393
- 2. Basic properties of stable distributions 394
- 3. Stable portfolio theory 401
- 4. Log-stable option pricing 404
- 5. Parameter estimation and empirical issues 415
- Appendix 420
- Acknowledgements 421
- References 421

- Ch. 14. Probability Distributions for Financial Models 427
- J. B. McDonald*

- 1. Introduction 427
- 2. Alternative models 428

- 3. Applications in finance 437
 - Appendix A: Special functions 454
 - Appendix B: Data 456
 - Acknowledgement 458
 - References 458

PART VI. APPLICATIONS OF SPECIALIZED STATISTICAL METHODS

Ch. 15. Bootstrap Based Tests in Financial Models 463

G. S. Maddala and H. Li

- 1. Introduction 463
- 2. A review of different bootstrap methods 464
- 3. Issues in the generation of bootstrap samples and the test statistics 466
- 4. A critique of the application of bootstrap methods in financial models 469
- 5. Bootstrap methods for model selection using trading rules 476
- 6. Bootstrap methods in long-horizon regressions 478
- 7. Impulse response analysis in nonlinear models 483
- 8. Conclusions 484
- References 485

Ch 16. Principal Components and Factor Analyses 489

C. R. Rao

- 1. Introduction 489
- 2. Principal components 490
- 3. Model based principal components 496
- 4. Factor analysis 498
- 5. Conclusions 503
- References 504

Ch. 17. Errors-in-Variables Problems in Financial Models 507

G. S. Maddala and M. Nimalendran

- 1. Introduction 507
- 2. Grouping methods 508
- 3. Alternatives to the two-pass estimation method 513
- 4. Direct and reverse regression methods 514
- 5. Latent variables / structural equation models with measurement 515
- 6. Artificial neural networks (ANN) as alternatives to MIMIC models 522
- 7. Signal extraction methods and tests for rationality 523
- 8. Qualitative and limited dependent variable models 523
- 9. Factor analysis with measurement errors 524
- 10. Conclusion 525
- References 525

Ch. 18. Financial Applications of Artificial Neural Networks 529

M. Qi

1. Introduction 529
2. Artificial Neural Networks 529
3. Relationship between ANN and interpretational statistical models 533
4. ANN implementation and interpretation 537
5. Financial applications 544
6. Conclusions 547
- Acknowledgement 548
- References 548

Ch. 19. Applications of Limited Dependent Variable Models in Finance 553

G. S. Maddala

1. Introduction 553
2. Studies on loan discrimination and default 553
3. Studies on bond ratings and bond yields 555
4. Event studies 557
5. Savings and loan and bank failures 559
6. Miscellaneous other applications 562
7. Suggestions for future research 564
- References 565

PART VII. MISCELLANEOUS OTHER PROBLEMS

Ch. 20. Testing Option Pricing Models 567

D. S. Bates

1. Introduction 567
2. Option pricing fundamentals 568
3. Time series-based tests of option pricing models 574
4. Implicit parameter estimation 587
5. Implicit parameter tests of alternate distributional hypotheses 600
6. Summary and conclusions 604
- References 605

Ch. 21. Peso Problems: Their Theoretical and Empirical Implications 613

M. D. D. Evans

1. Introduction 613
2. Peso problems and forecast errors 615
3. Peso problems, asset prices and fundamentals 626
4. Risk aversion and peso problems 634

- 5. Econometric issues 641
- 6. Conclusion 644
- References 645

Ch. 22. Modeling Market Microstructure Time Series 647

J. Hasbrouck

- 1. Introduction 647
- 2. Simple univariate models of prices 651
- 3. Simple bivariate models of prices and trades 657
- 4. General specifications 667
- 5. Time 673
- 6. Discreteness 677
- 7. Nonlinearity 679
- 8. Multiple mechanisms and markets 680
- 9. Summary and directions for further work 685
- References 687

Ch. 23. Statistical Methods in Tests of Portfolio Efficiency: A Synthesis 693

J. Shanken

- 1. Introduction 693
- 2. Testing efficiency with a riskless asset 695
- 3. Testing efficiency without a riskless asset 701
- 4. Related work 708
- References 709
