Contents

1 Random Operators 1
1.1 Physical Background 1
1.2 Model and Notation 2
1.3 Transport Properties and Spectral Types 6
1.4 Fluctuation Boundaries of the Spectrum 10

2 Existence of the Integrated Density of States 13
2.1 Schrödinger Operators on Manifolds: Motivation 15
2.2 Random Schrödinger Operators on Manifolds: Definitions 17
2.3 Non-Randomness of Spectra and Existence of the IDS 21
2.4 Measurability 26
2.5 Bounds on the Heat Kernels Uniform in ω 30
2.6 Laplace Transform and Ergodic Theorem 37
2.7 Approach Using Dirichlet-Neumann Bracketing 39
2.8 Independence of the Choice of Boundary Conditions 42

3 Wegner Estimate 45
3.1 Continuity of the IDS 46
3.2 Application to Anderson Localisation 50
3.3 Resonances of Hamiltonians on Disjoint Regions 53

4 Wegner's Original Idea. Rigorous Implementation 57
4.1 Spectral Averaging of the Trace of the Spectral Projection 57
4.2 Improved Volume Estimates 61
4.3 Sparse Potentials 64
4.4 Locally Continuous Coupling Constants 66
4.5 Potentials with Small Support 69
4.6 Hölder Continuous Coupling Constants 72
4.7 A Partial Integration Formula for Singular Distributions 73
4.8 Coupling Constants with Bernoulli Disorder 74
4.9 Single Site Potentials with Changing Sign 74
4.10 Uniform Wegner Estimates for Long Range Potentials 75

5 Lipschitz Continuity of the IDS 79
5.1 Partition of the Trace into Local Contributions 80
5.2 Spectral Averaging of Resolvents 83
5.3 Stone's Formula and Spectral Averaging of Projections 84
5.4 Completion of the Proof of Theorem 5.0.1 86
5.5 Single Site Potentials with Changing Sign 87
5.6 The Finite Section Method for Multi-Level Laurent Matrices .. 95
5.7 Unbounded Coupling Constants and Magnetic Fields 96

A Properties of the Spectral Shift Function 99
A.1 The SSF for Trace Class Perturbations 99
A.2 The SSF for Schrödinger Operators and the Invariance Principle 102
A.3 Singular Value Estimates 103
A.4 Bounds on the SSF for Schrödinger Operators 108
