Preface v

Contributors xix

PART I. STATISTICS IN RESEARCH AND DEVELOPMENT

Ch. 1. Guidelines for Selecting Factors and Factor Levels for an Industrial Designed Experiment 3
V. Czitrom

1. General guidelines 4
2. Guidelines for selecting factors 7
3. Guidelines for selecting factor levels 12
4. Guidelines for relationships between factors 18
5. Guidelines related to the factor space 20
6. Guidelines for variables held constant or not controlled 24
7. Guidelines for selecting control and noise factors 27
8. Summary 30
- Acknowledgements 31
- References 31

Ch. 2. Industrial Experimentation for Screening 33
D. K. J. Lin

1. Introduction 33
2. Screening designs 35
3. Supersaturated designs 44
4. Computer experiments 54
5. Dispersion effects in screening designs 65
6. Discussion 70
- References 70

Ch. 3. The Planning and Analysis of Industrial Selection and Screening Experiments 75

G. Pan, T. J. Santner and D. M. Goldsman

1. Introduction 75
2. Designing single-factor experiments to select treatments based on means 76
3. Single-factor experiments to screen treatments based on means 85
4. Selection and screening for completely randomized experiments 96
5. Screening to identify robust products based on fractional-factorial experiments 97
6. Selection and screening for factorial experiments with randomization restrictions 103
7. Screening and selection concerning variability 123
8. Distribution theory 126
- References 127

Ch. 4. Uniform Experimental Designs and their Applications in Industry 131

K.-T. Fang and D. K. J. Lin

1. Introduction 131
2. Preliminaries 132
3. Implementation of the uniform design in industrial experiments 134
4. Uniform design in other environments 137
5. Construction of uniform designs 142
6. Computer experiments 149
7. The connections between uniformity and other designs 158
8. Summary and discussion 165
- Acknowledgements 166
- References 167

Ch. 5. Mixed Models and Repeated Measures: Some Illustrative Industrial Examples 171

G. A. Milliken

1. Introduction 171
2. The mixed model 171
3. The simplest mixed model – one-way treatment structure with unequal variances 172
4. Model for repeatability and reproducibility – estimating the variance components 174
5. Models for data from experiments with multiple processing steps 180
6. Baking cookies – example of a two-step process using a split-plot design 181
7. Baking cookies – example of a two-step process using a strip-plot design 187
8. Semiconductors – example of a repeated measures design 192
9. Semiconductors – example of repeated measures in a split-split-plot design 199
10. Discussion 206
- References 207

Ch. 6. Current Modeling and Design Issues in Response Surface Methodology: GLMs and Models with Block Effects 209

A. I. Khuri

1. Introduction 209
2. Response surface models with block effects 209

- 3. Generalized linear models 215
- 4. Designs for generalized linear models 220
- 5. Dealing with the design dependence problem 223
- 6. Concluding remarks 228
 - References 228

Ch. 7. A Review of Design and Modeling in Computer Experiments 231
V. C. P. Chen, K.-L. Tsui, R. R. Barton and J. K. Allen

- 1. Introduction 231
- 2. General strategy and applications 232
- 3. Statistical modeling issues for metamodels 237
- 4. Experimental design issues 244
- 5. Discussion 255
 - References 255

Ch. 8. Quality Improvement and Robustness via Design of Experiments 263
B. E. Ankenman and A. M. Dean

- 1. Introduction and overview 263
- 2. Models for parameter design 269
- 3. Basic factorial plans for parameter design 274
- 4. Choice of plans for parameter design 283
- 5. Follow-up experiments 289
- 6. Analysis for uncontrolled noise factors 291
- 7. Analysis for controlled noise factors 298
- 8. Related topics 304
 - References 309

Ch. 9. Software to Support Manufacturing Experiments 319
J. E. Reece

- 1. Introduction and overview 319
- 2. Summary of software evaluations 333
- 3. Appendix. Demonstrations of products evaluated 345
- 4. Conclusions and acknowledgments 456
 - References 457

Ch. 10. Statistics in the Semiconductor Industry 459
V. Czitrom

- 1. Introduction 459
- 2. Sematech qualification plan 460
- 3. General statistical issues 461
- 4. Gauge studies 471
- 5. Passive data collection 474
- 6. Designed experiments 479
- 7. Statistical process control 488

- 8. Reliability 494
- 9. Conclusion 495
- Appendix. Semiconductor processing 496
- Acknowledgements 497
- References 497

Ch. 11. PREDICT: A New Approach to Product Development and Lifetime Assessment Using Information Integration Technology 499
J. M. Booker, T. R. Bement, M. A. Meyer and W. J. Kerscher, III

- 1. Introduction 499
- 2. The applications 501
- 3. Steps for implementing PREDICT 503
- 4. Expert judgment 506
- 5. Statistical issues and analysis 509
- 6. Conclusions 520
- Acknowledgements 521
- References 521

Ch. 12. The Promise and Challenge of Mining Web Transaction Data 523
S. R. Dalal, D. Egan, Y. Ho and M. Rosenstein

- 1. Introduction 524
- 2. Need for and complexity of measurements 526
- 3. Basic measurements – use of log files to collect data 528
- 4. Basic measurements: Web metrics 529
- 5. Fallacies in looking at log files – some measurement issues 531
- 6. Latent semantic indexing (LSI) applied to Web transactions 537
- 7. Emerging challenges for e-commerce data mining 544
- 8. Summary 548
- References 549

PART II. STATISTICS IN ON-LINE INDUSTRIAL PROCESSES

Ch. 13. Control Chart Schemes for Monitoring the Mean and Variance of Processes Subject to Sustained Shifts and Drifts 553
Z. G. Stoumbos, M. R. Reynolds, Jr. and W. H. Woodall

- 1. Introduction 553
- 2. Control charts for monitoring the process mean and variance 556
- 3. Statistical measures of control chart performance 561
- 4. Methods for evaluating the ANOS, ATS, and SSATS 561
- 5. Detecting sustained shifts and drifts in μ and/or σ 563
- 6. An illustrative example of control chart plots 567
- 7. Concluding discussion 569
- Acknowledgements 570
- References 570

- Ch. 14. Multivariate Control Charts: Hotelling T^2 , Data Depth and Beyond 573
R. Y. Liu
1. Introduction 573
 2. Parametric control charts 575
 3. Nonparametric control charts 577
 4. Concluding remarks 587
 - Appendix 590
 - Acknowledgements 591
 - References 592
- Ch. 15. Effective Sample Sizes for T^2 Control Charts 595
R. L. Mason, Y.-M. Chou and J. C. Young
1. Introduction 595
 2. Sample size and the UCL 596
 3. Sample size in Phase I 599
 4. Sample size in Phase II 604
 5. Discussion and summary 606
 - References 606
- Ch. 16. Multidimensional Scaling in Process Control 609
T. F. Cox
1. Introduction 609
 2. Proximities 609
 3. Data for analysis 611
 4. Classical scaling 613
 5. Nonmetric scaling 615
 6. Procrustes analysis 616
 7. Biplots 618
 8. Unfolding 619
 9. Individual differences scaling (INDSCAL) 620
 10. MPC using MDS 621
 - References 623
- Ch. 17. Quantifying the Capability of Industrial Processes 625
A. M. Polansky and S. N. U. A. Kirmani
1. Introduction 625
 2. Process capability indices 626
 3. Nonparametric and robust process capability 645
 4. Bayesian process capability 648
 - Acknowledgement 649
 - References 650

Ch. 18. Taguchi's Approach to On-line Control Procedure 657

M. S. Srivastava and Y. Wu

1. Introduction 657
2. Taguchi's procedure under random walk model 659
3. Improvement under random walk model without measurement error 663
4. On-line control under random walk model with measurement error 671
5. Robustness under nonnormality 678
6. Effects of asymmetric loss function 680
7. On-line control procedures with attribute observations 683
8. Concluding remarks 685
- Appendix 1. Average cost rate under symmetric random walk model 686
- Appendix 2. Calculation of ρ_i 's 687
- Appendix 3. Evaluation of mean squared deviation with random measurement error 689
- Appendix 4. Mean squared deviation with random walk measurement error 691
- Appendix 5. Some results on randomly stopped Brownian motion 691
- Acknowledgement 692
- References 692

Ch. 19. Dead-Band Adjustment Schemes for On-line Feedback Quality Control 695

A. Luceño

1. Introduction 695
2. The feedback control loop 698
3. Disturbance process and disturbance model 699
4. Dynamics of the adjustment system 701
5. The control rule 702
6. The operating costs 703
7. The long-run overall cost per unit sampling interval 704
8. Measurement and adjustment errors 705
9. Dead-band adjustment schemes versus repeated adjustment schemes 706
10. Exact characterization and evaluation of the AAI 707
11. Exact characterization and evaluation of the MSD 711
12. Evaluation of the AAI and MSD under pure delayed dynamics 713
13. Minimizing the long-run overall cost function 714
14. Choosing a DBA scheme when unitary costs are unknown 717
15. Robustness of the DBA schemes and the EWMA forecasts 719
16. Monitoring a system subject to feedback adjustment 722
17. Concluding remarks 722
- Acknowledgements 723
- References 723

PART III. MEASUREMENT PROCESSES

Ch. 20. Statistical Calibration and Measurements 731

H. Iyer

1. What is a measurement? 731
2. Direct and indirect measurements 731
3. Linear calibration problem 734

4. Regulation	741
5. Single point calibration	743
6. Two-point calibration	744
7. Polynomial and nonlinear calibration	745
8. Bootstrap intervals for x_0	746
9. Multiple-use confidence regions	747
10. Multivariate calibration	749
11. Principle components regression	750
12. Partial least squares regression (PLSR)	756
13. Concluding remarks	760
References	761

Ch. 21. Subsampling Designs in Industry: Statistical Inference for Variance Components 765

R. Khattree

1. Introduction	765
2. Balanced nested designs	766
3. General unbalanced nested designs	771
4. Negative estimates	773
5. Staggered nested designs	773
6. Interval estimation	783
7. Hypothesis testing	784
8. Concluding remarks	791
Appendix	792
References	792

Ch. 22. Repeatability, Reproducibility and Interlaboratory Studies 795

R. Khattree

1. Introduction	795
2. Some definitions	796
3. Statistical models to assess repeatability and reproducibility	798
4. Point estimation	803
5. Interval estimation of repeatability and reproducibility	815
6. Unbalanced data	816
7. Estimation of repeatability and reproducibility limits	817
8. Other related issues and concluding remarks	819
Acknowledgement	820
References	820

Ch. 23. Tolerancing – Approaches and Related Issues in Industry 823

T. S. Arthanari

1. Introduction	823
2. Classical problem of assembly tolerancing	826
3. Geometric and kinematic variations	832

4. Statistical tolerance analysis 835
5. Tolerance allocation problem, formulations and approaches 839
6. Tolerance analysis of mechanical assemblies with kinematic adjustments 841
7. Design centering and tolerancing in circuit designs 844
8. Taguchi's robustness objective and tolerancing 847
9. Tolerance compliance and inspection issues 857
10. Measurement tolerancing and consumer's risk consideration 859
11. The language of tolerances and concluding remarks 860
 - Acknowledgements 861
 - References 861

PART IV. STATISTICAL INFERENTIAL TECHNIQUES USEFUL IN INDUSTRIAL APPLICATIONS

Ch. 24. Goodness-of-fit Tests for Univariate and Multivariate Normal Models 869 *D. K. Srivastava and G. S. Mudholkar*

1. Introduction 869
2. Univariate normality 871
3. Univariate normality: illustrations 884
4. Multivariate normality 888
5. Multivariate normality: illustrations 899
6. Conclusions 901
 - References 902

Ch. 25. Normal Theory Methods and their Simple Robust Analogs for Univariate and Multivariate Linear Models 907 *D. K. Srivastava and G. S. Mudholkar*

1. Introduction 907
2. Univariate normal theory tests 908
3. Robust test procedures: univariate case 916
4. Multivariate normal theory tests 928
5. Robust test procedures 937
6. Examples 948
 - Acknowledgements 951
 - References 951

Ch. 26. Diagnostic Methods for Univariate and Multivariate Normal Data 957 *D. N. Naik*

1. Introduction 957
2. Univariate data 958
3. Univariate normal data 959
4. Linear regression data 964
5. Multivariate data 970

- 6. Multivariate normal data 974
- 7. Multivariate linear regression data 979
- 8. An example 986
- Acknowledgements 989
- References 989

Ch. 27. Dimension Reduction Methods Used in Industry 995
G. Merola and B. Abraham

- 1. Introduction 995
- 2. Dimensionality reduction methods for prediction 997
- 3. Approaches to dimensionality reduction 1000
- 4. Distributional issues 1020
- 5. Exploratory analysis with DRMs 1023
- 6. Process monitoring 1024
- 7. Examples 1025
- 8. Conclusions 1035
- Acknowledgements 1035
- Appendix 1035
- References 1037

Ch. 28. Growth and Wear Curves 1041
A. M. Kshirsagar

- 1. Introduction 1041
- 2. The Potthoff–Roy model 1042
- 3. Extensions and generalizations of the Potthoff–Roy model 1046
- 4. Nonparametric methods of the analysis of growth data 1048
- 5. Linear spectral models 1050
- 6. Prediction of future observations 1050
- 7. Random coefficients growth models 1051
- 8. Concluding remarks 1053
- References 1053

Ch. 29. Time Series in Industry and Business 1055
B. Abraham and N. Balakrishna

- 1. Introduction 1055
- 2. ARIMA models 1057
- 3. ARIMA model building 1062
- 4. Forecasts from ARIMA models 1069
- 5. Interventions, outliers and missing observations 1075
- 6. Application to control 1077
- 7. State-space models and the Kalman filter 1081
- 8. Non-Gaussian time series 1083
- 9. Other nonlinear time series models 1090
- 10. Models for variances 1094
- 11. Long-memory processes 1101

12. Summary and concluding remarks	1102
Acknowledgements	1103
References	1103

PART V. SOFTWARE RELIABILITY

Ch. 30. Stochastic Process Models for Reliability in Dynamic Environments	1109
<i>N. D. Singpurwalla, T. A. Mazzuchi, S. Özekici and R. Soyer</i>	

1. Introduction	1109
2. The Markov process and the Markov chain	1112
3. The Markov renewal, the semi-Markov, and the Markov additive processes	1116
4. The nonhomogeneous and the doubly stochastic Poisson point processes	1124
5. The Markov modulated Poisson point process	1126
Acknowledgements	1128
References	1129

Ch. 31. Bayesian Inference for the Number of Undetected Errors	1131
<i>S. Basu</i>	

1. Introduction	1131
2. Model formulation	1134
3. Dependent reviewers	1135
4. Heterogeneity among the errors	1137
5. Performance investigation: a simulation study	1140
6. Heterogeneity of both reviewers and errors	1143
7. Applications	1144
8. Model fitting	1145
9. Discussion	1148
References	1148
