Preface v

Contributors xv

PART I. GENETICS AND EPIDEMIOLOGY

Ch. 1. Methods for the Inheritance of Qualitative Traits 1

J. Rice, R. Neuman, and S. O. Moldin

1. Introduction 1
2. Liability/threshold concepts and population distributions 2
3. Familial resemblance 5
4. Bivariate multifactorial transmission models 9
5. Logistic regressive approach 13
6. The LISREL model 16
7. Discussion 25
References 26

Ch. 2. Ascertainment Biases and Their Resolution in Biological Surveys 29

W. J. Ewens

1. Introduction 29
2. Theory and an example 32
3. Arbitrary ascertainment probabilities 37
4. Complex segregation analysis 38
5. Estimation of bias and standard error 41
6. Numerical example 42
7. Further comments for nuclear families 50
8. Continuous measurements 52
9. Pedigrees 57
10. Final note 59
Acknowledgement 59
References 59

Ch. 3. Statistical Considerations in Applications of Path Analysis in Genetic Epidemiology 63

D. C. Rao

1. Introduction 63
2. A contemporary path model 64
3. Statistical method of analysis 70
4. Complete and partial environmental indices 74
5. Issues needing further work 78
6. Summary 78
- References 78

Ch. 4. Statistical Methods for Linkage Analysis 81

G. M. Lathrop and J. M. Lalouel

1. Introduction 81
2. Genetic background 82
3. Introduction to statistical methods 87
4. Detection of linkage with pairwise data 91
5. Construction of genetic maps 104
6. Multiple marker loci and disease phenotypes 114
7. Conclusion 118
- References 118

Ch. 5. Statistical Design and Analysis of Epidemiologic Studies: Some Directions of Current Research 125

N. Breslow

1. Introduction 125
2. Design 125
3. Analysis 135
- References 143

PART II. ANTHROPOMETRY AND EVOLUTIONARY BIOLOGY

Ch. 6. Robust Classification Procedures and Their Applications to Anthropometry 145

N. Balakrishnan and R. S. Ambagaspitiya

1. Introduction 145
2. Modified maximum likelihood estimation 147
3. Robust univariate classification procedures and applications 151
4. Robust multivariate linear classification procedure and applications 161
5. Robust univariate quadratic classification procedure and applications 171

- 6. Robust multivariate quadratic classification procedure and applications 179
- 7. Robust univariate linear classification procedure based on dichotomous and continuous variables and applications 185
- 8. Robust multivariate linear classification procedure based on dichotomous and continuous variables and applications 191
- 9. Some other problems of research and applications 198
 - Acknowledgements 199
 - References 199

Ch. 7. Analysis of Population Structure: A Comparative Analysis of Different Estimators of Wright's Fixation Indices 203

R. Chakraborty and H. Danker-Hopfe

- 1. Introduction 203
- 2. Parameters of population structure 204
- 3. Estimation of fixation indices 210
- 4. Standard errors and hypothesis testing 227
- 5. An application 235
- 6. Discussion 246
- 7. Summary 251
 - Acknowledgements 252
 - References 252

Ch. 8. Estimation of Relationships from Genetic Data 255

E. A. Thompson

- 1. Introduction: Genetic similarity and genealogical relationships 255
- 2. Mendelian segregation and the estimation of familial relationships 256
- 3. Relationships between populations 264
- 4. Phyletic relationships 267
- 5. Conclusion 268
 - Acknowledgement 268
 - References 268

Ch. 9. Measurement of Genetic Variation for Evolutionary Studies 271

R. Chakraborty and C. R. Rao

- 1. Introduction 271
- 2. Genetic variation within populations 272
- 3. Genetic variation between populations 287
- 4. Practical utility of measures of variation 306
- 5. Summary and conclusions 309
 - Acknowledgements 311
 - References 311

Ch. 10. Statistical Methods for Phylogenetic Tree Reconstruction 317

N. Saitou

1. Introduction 317
2. Theoretical aspects of phylogenetic trees 317
3. Distance methods 323
4. Character-state methods 336
5. Relative efficiency of tree-making methods 341
- Acknowledgements 343
- References 343

Ch. 11. Statistical Models for Sex-Ratio Evolution 347

S. Lessard

1. The notion of reproductive value and optimal sex ratios 347
2. Covariance formulas and the evolution of the sex ratio 351
3. Exact genetic models for sex-ratio evolution 359
4. Multifactorial sex determination models 364
5. Multivariate Gaussian models for two-sex populations 368
- References 371

PART III. CANCER BIOLOGY

Ch. 12. Stochastic Models of Carcinogenesis 373

S. H. Moolgavkar

1. Introduction 373
2. The Armitage–Doll multistage model 375
3. A two-stage model 379
4. Analysis of human epidemiologic data 385
5. Analysis of experimental data 388
6. Concluding remarks 390
- References 391

Ch. 13. An Application of Score Methodology: Confidence Intervals and Tests of Fit for One-Hit-Curves 395

J. J. Gart

1. The single-parameter case 395
2. Application to the one-hit curve 397
3. The nuisance-parameter case 400
4. Application to the comparison of one-hit curves 402
- References 406

PART IV. MEDICAL STATISTICS

Ch. 14. Kidney-Survival Analysis of IgA Nephropathy Patients: A Case Study 407

O. J. W. F. Kardaun

- Introduction and summary 407
- 1. Case description 409
- 2. Inventory 419
- 3. Towards individual prognosis of IgA nephropathy 423
- 4. Treatment of missing values 446
- Appendix A: The nomogram of Figure 2 449
- Appendix B: The computer program CONCERN 453
- Acknowledgement 453
- References 454

Ch. 15. Confidence Bands and the Relation with Decision Analysis: Theory 461

O. J. W. F. Kardaun

- Summary 461
- 1. Expressing statistical uncertainties in estimating $S(t|z)$ 462
- 2. Connection with decision analysis 482
- Acknowledgement 509
- References 510

Ch. 16. Sample Size Determination in Clinical Research 515

J. Bock and H. Toutenburg

- 1. Introduction 515
- 2. Continuous response variables 516
- 3. Binary responses 525
- 4. Survival time studies 529
- 5. Correlations 532
- References 536

Subject Index 539

Contents of Previous Volumes 547
