Preface v

Contributors xvii

PART I. COMPUTING – AN OVERVIEW

Ch. 1. Algorithms 1

B. Kalyanasundaram

- 1. Introduction 1
- 2. Asymptotic behavior of algorithms 2
- 3. Data structures 4
- 4. Searching and sorting 6
- 5. Paradigms 10
- 6. Intractable and unsolvable problems 13
- References 15

Ch. 2. Steady State Analysis of Stochastic Systems 17

K. Kant

- 1. Introduction 17
- 2. Operational analysis and fundamental laws 21
- 3. Stochastic analysis 30
- 4. Product form queuing networks 37
- 5. Algorithms for closed PF networks 44
- 6. Aggregation and approximate modeling 51
- 7. Decomposition approximation 58
- 8. Petri-net based performance modeling 62
- 9. Bibliographic notes 67
- References 68

Ch. 3. Parallel Computer Architectures 69*R. Krishnamurti and B. Narahari*

1. Introduction 69
2. Introduction to pipelining 70
3. Vector processing 75
4. Interconnection networks for parallel architectures 82
5. SIMD architectures 90
6. MIMD architectures 95
7. Impact of application characteristics 96
- References 99

Ch. 4. Database Systems 101*S. Lanka and S. Pal*

1. Introduction 101
2. Data abstraction 103
3. Database system architecture 105
4. Physical storage 106
5. Data models 108
6. Database operations 114
7. Design theory 117
8. Transaction processing 120
9. Distributed databases 129
10. Statistical databases 132
11. Commercial database systems 134
12. Current trends and future challenges 135
- References 136

Ch. 5. Programming Languages and Systems 141*S. Purushothaman and J. Seaman*

1. Introduction 141
2. Programming languages 143
3. Architecture and operating systems 153
4. Conclusion 166
- References 167

Ch. 6. Algorithms and Complexity for Markov Processes 169*R. Varadarajan*

1. Introduction 169
2. Models of computation 169
3. Markov chains 174
4. Markov decision processes 176
5. Multi-edge graphs and Markov processes 177
6. Algorithms for Markov chains 179

7. Algorithms for Markov decision processes 187
8. Inherently sequential problems 197
9. Conclusions 198
 - Acknowledgement 198
 - References 199

PART II. MATHEMATICAL PROGRAMMING AND APPLICATIONS TO STATISTICS

- Ch. 7. Mathematical Programming – A Computational Perspective 201
W. W. Hager, R. Horst and P. M. Pardalos

1. Preliminaries 201
2. Unconstrained optimization 208
3. Linear programming 221
4. Quadratic programming 225
5. Smooth constrained optimization 230
6. Nonsmooth optimization 242
7. Global optimization 249
8. Complexity 260
9. Parallel computing 263
10. Test problems and software 263
- References 265

- Ch. 8. Integer Programming 279
P. M. Pardalos and Y. Li

1. Introduction 279
2. Modeling with integer programming 280
3. Methods for integer programming 286
4. Final remarks 299
- References 299

PART III. LEAST SQUARES ESTIMATION

- Ch. 9. Numerical Aspects of Solving Linear Least Squares Problems 303
J. L. Barlow

1. Simple rounding error analysis 303
2. Least squares computations 313
3. The singular value decomposition 329
4. Rank deficient least squares problems 340
5. Equality constrained least squares problems 356
- References 371

Ch. 10. The Total Least Squares Problem 377

S. Van Huffel and H. Zha

1. Introduction 377
 2. The basic algorithm 382
 3. Extensions of the basic TLS algorithm 386
 4. More efficient TLS algorithms 392
 5. TLS applications 395
 6. Concluding remarks and generalizations 401
- References 405

PART IV. GENERAL ESTIMATION PROBLEMS

Ch. 11. Construction of Reliable Maximum Likelihood Algorithms with Application to Logistic and Cox Regression 409

D. Böhning

1. Introduction 409
 2. The lower bound procedure and a monotonicity property 410
 3. Analogies to the EM principle 412
 4. Applications 415
- References 421

Ch. 12. Nonparametric Function Estimation 423

T. Gasser, J. Engel and B. Seifert

1. Introduction 423
 2. Regression estimation 424
 3. Density estimation 448
 4. Algorithms and software 458
- References 460

Ch. 13. Computation Using the QR Decomposition 467

C. R. Goodall

1. Introduction 467
 2. The QR decomposition in regression 472
 3. Computational details and implementations 478
 4. Problem-solving using the QR decomposition 488
 5. Some statistical aspects 498
 6. X random and the complex QR decomposition 503
- Appendix. LAPACK routines for the QR decomposition 504
- Acknowledgement 506
- References 506

Ch. 14. The EM Algorithm 509*N. Laird*

1. Introduction 509
2. The general setup 511
3. Applications 514
- References 519

Ch. 15. Analysis of Ordered Categorical Data through Appropriate Scaling 521*C. R. Rao and P. M. Caligiuri*

1. Introduction 521
2. Contingency tables 522
3. Response pattern tables 528
4. Summary 531
 - Appendix. GINO 532
 - Acknowledgement 532
 - References 533

PART V. ARTIFICIAL INTELLIGENCE AND STATISTICS**Ch. 16. Statistical Applications of Artificial Intelligence 535***W. A. Gale, D. J. Hand and A. E. Kelly*

1. Opening new areas for research 535
2. Examples of AI applications in statistics 541
3. Non-expert system of applications of AI 559
4. Comments on building statistical systems 562
5. Speculation on the future of AI in statistics 564
 - Acknowledgement 566
 - References 566

Ch. 17. Some Aspects of Natural Language Processes 577*A. K. Joshi*

1. Introduction 577
2. Grammars and parsers 578
3. CFG-based unification grammars 580
4. Mildly context-sensitive grammars 582
5. Parsing complexity 586
6. Statistical approaches to natural language processing 587
7. Multilingual natural language processing 592
8. Summary 594
 - Acknowledgements 594
 - References 594

PART VI. SIMULATION AND RESAMPLING**Ch. 18. Gibbs Sampling 599***S. F. Arnold*

1. Introduction 599
 2. Gibbs sampling 600
 3. Why it works 602
 4. How to use Gibbs sampling 605
 5. Some Bayesian applications of Gibbs sampling 611
 6. Variations on Gibbs sampling 620
- Acknowledgement 624
References 624

Ch. 19. Bootstrap Methodology 627*G. J. Babu and C. R. Rao*

1. Introduction 627
 2. Consistency 628
 3. Accuracy of the bootstrap methods 630
 4. Bootstrap for non-smooth functions 633
 5. Computation of the bootstrap distribution 635
 6. Bootstrap significance tests 636
 7. Bootstrap confidence intervals 639
 8. Randomly censored models 643
 9. Regression models 645
 10. Time series models 649
 11. Autoregressive models 650
 12. Sample survey models 651
 13. Bayesian bootstrap methods 654
- References 655

Ch. 20. The Art of Computer Generation of Random Variables 661*M. T. Boswell, S. D. Gore, G. P. Patil and C. Taillie*

1. Introduction 661
 2. Generating uniform random numbers on a computer 662
 3. Univariate generation methods 666
 4. Multivariate generation methods 706
- Acknowledgement 714
References 714

Ch. 21. Jackknife Variance Estimation and Bias Reduction 723

S. D. Peddada

1. Introduction 723
2. Reduction of bias 724
3. Variance estimation: iid case 729
4. Variance estimation in linear models: The non-iid case 732
- References 742

PART VII. STATISTICAL GRAPHICS

Ch. 22. Designing Effective Statistical Graphs 745

D. A. Burn

1. Introduction 745
2. Concepts 748
3. Principles 756
4. Guidelines 760
5. Summary 773
- References 773

Ch. 23. Graphical Methods for Linear Models 775

A. S. Hadi

1. Introduction 775
2. The standard linear model 778
3. Graphs before fitting a model 779
4. Graphs after fitting a model 789
5. Summary and concluding remarks 800
- References 801

Ch. 24. Graphics for Time Series Analysis 803

H. J. Newton

1. Introduction 803
2. Plotting a time series 804
3. Some basic univariate time series plots 807
4. Transformations 814
5. Model identification 815
6. Spectral estimation 815
7. Forecasts 816
8. Multivariate time series 817
- References 822

Ch. 25. Graphics as Visual Language 825*T. Selker and A. Appel*

1. Introduction 825
 2. Background 825
 3. Graphical alphabet 826
 4. Visual syntax 844
 5. Interaction 848
 6. Visual language composition 849
 7. Visual language revisited 850
 8. Computer graphics aids for statisticians 851
- Acknowledgements 853
References 853

Ch. 26. Statistical Graphics and Visualization 857*E. J. Wegman and D. B. Carr*

1. Introduction 857
- PART 1. COMPUTER GRAPHICS**
2. Two-dimensional graphics transforms, viewing transforms and screen coordinates 859
 3. Three-dimensional graphics transformations and projections 866
 4. Geometric forms and models, hidden surfaces 874
 5. Realistic rendering and transparency 880
 6. Stereoscopic displays 889
- PART 2. GRAPHICS TECHNIQUES**
7. Principles of graphics construction 901
 8. One-dimensional variables 911
 9. Visualizing multidimensional data 919
 10. Concluding remarks 954
- Acknowledgement 955
References 955

Ch. 27. Multivariate Statistical Visualization 959*F. W. Young, R. A. Faldowski and M. M. McFarlane*

1. Introduction 959
 2. Visualizing multivariate data 964
 3. Visualizing multivariate models 975
 4. Visualizing multivariate analyses 991
 5. Conclusion 996
- References 996

Ch. 28. Graphical Methods for Process Control 999

T. L. Ziemer

1. Introduction 999
 2. Pareto charts 1000
 3. Cause-and-effect diagrams 1003
 4. Control charts 1004
 5. Process capability 1017
- References 1018
