

Contents

Preface	vii
I Basic Ideas	1
1 Introduction	3
1.1 Why Use Geometry?	3
1.2 A Simple Illustration	4
1.3 Tradition and Practice	7
1.4 How to Read This Book	8
Exercise	9
2 The Geometric Tool Kit	10
2.1 Introducing Vectors	11
2.2 Putting Vectors Together	15
2.3 Angles Between Vectors	20
2.4 Projections	26
2.5 Sums of Squares	30
Exercises	32
Solutions to the Reader Exercises	35
3 The Statistical Tool Kit	39
3.1 Basic Ideas	39
3.2 Combining Variables	45
3.3 Estimation	48
3.4 Reference Distributions	51
Solutions to the Reader Exercises	54

4 Tool Kits At Work	55
4.1 The Scientific Method	55
4.2 Statistical Analysis	58
Exercises	63
II Introduction to Analysis of Variance	65
5 Single Population Questions	67
5.1 An Illustrative Example	67
5.2 General Case	77
5.3 Virtues of Our Estimates	83
5.4 Summary	86
Class Exercise	87
Exercises	90
Solutions to the Reader Exercises	94
6 Questions About Two Populations	97
6.1 A Case Study	98
6.2 General Case	112
6.3 Computing	119
6.4 Summary	123
Class Exercise	124
Exercises	127
Solution to the Reader Exercise	131
7 Questions About Several Populations	133
7.1 A Simple Example	133
7.2 Types of Contrast	136
7.3 The Overview	144
7.4 Summary	148
Solutions to the Reader Exercises	150
III Orthogonal Contrasts	153
8 Class Comparisons	155
8.1 Analyzing Example A	155
8.2 General Case	169
8.3 Summary	175
Class Exercise	176
Exercises	179

9 Factorial Contrasts	187
9.1 Introduction	187
9.2 Analyzing Example B	188
9.3 Analyzing Example C	203
9.4 Generating Factorial Contrasts	213
9.5 Summary	218
Exercises	218
10 Polynomial Contrasts	224
10.1 Analyzing Example D	224
10.2 Consolidating the Ideas	248
10.3 A Case Study	258
10.4 Summary	262
Exercises	263
Solutions to the Reader Exercises	267
11 Pairwise Comparisons	271
11.1 Analyzing Example E	271
11.2 Least Significant Difference	283
11.3 Multiple Comparison Procedures	284
11.4 Summary	290
Class Exercise	291
Exercises	292
IV Introducing Blocking	297
12 Randomized Block Design	299
12.1 Illustrative Example	300
12.2 General Discussion	310
12.3 A Realistic Case Study	312
12.4 Why and How to Block	321
12.5 Summary	324
Class Exercise	325
Exercises	327
13 Latin Square Design	340
13.1 Illustrative Example	340
13.2 General Discussion	349
13.3 Summary	353
Exercise	353

14 Split Plot Design	354
14.1 Introduction	354
14.2 Analysis	356
14.3 Discussion	369
14.4 Summary	372
Exercises	373
Solutions to the Reader Exercises	378
V Fundamentals of Regression	381
15 Simple Regression	383
15.1 Illustrative Example	383
15.2 General Case	399
15.3 Confidence Intervals	402
15.4 Correlation Coefficient	408
15.5 Pitfalls for the Unwary	414
15.6 Summary	419
Class Exercise	421
Exercises	425
Solutions to the Reader Exercises	430
16 Polynomial Regression	431
16.1 No Pure Error Term	431
16.2 Pure Error Term	448
16.3 Summary	456
Exercises	457
17 Analysis of Covariance	461
17.1 Illustrative Example	461
17.2 Independent Lines	473
17.3 Use of ANCOVA	479
17.4 Summary	485
Exercises	488
Solutions to the Reader Exercises	492
18 General Summary	493
18.1 Review	493
18.2 Where to from Here?	499
18.3 Summary	503

Appendices	504
A Unequal Replications: Two Populations	504
A.1 Illustrative Example	504
A.2 General Case	510
Exercises	513
B Unequal Replications: Several Populations	515
B.1 Class Comparisons	515
B.2 Factorial Contrasts	522
B.3 Other Cases	526
B.4 Summary	527
Exercises	528
C Alternative Factorial Notation	530
Solution to the Reader Exercise	534
D Regression Through the Origin	535
E Confidence Intervals	538
E.1 General Theory	538
T Statistical Tables	542
References	550
Index	552
