Preface . . . . .	v
Names and Addresses of Invited Speakers . . . . .	vii
Titles and Authors of Contributed Papers . . . . .	ix
Names and Addresses of Presenters of Contributed Papers . . . . .	xi
R. Ansgore: Survey of equivalence theorems in the theory of difference approximations for partial initial value problems . . . . .	1
Paul Arminjon: Finite element analysis of moving loads on a floating ice sheet . . . . .	17
F. Brezzi and P. A. Raviart: Mixed finite element methods for 4th order elliptic equations . . . . .	33
G. Capriz and M. Capovani: Classes of matrices and related computational problems . . . . .	57
Germund Dahlquist: On the relation of G-stability to other stability concepts for linear multistep methods . . . . .	67
J. Descloux: On the equation of Boussinesq . . . . .	81
E. G. D'jakonov: On triangulations in the finite element method and efficient iterative methods . . . . .	103
Jim Douglas, Jr. and Todd Dupont: $H^{-1}$ Galerkin methods for problems involving several space variables . . . . .	125
Hiroshi Fujita: On the semi-discrete finite element approximation for the evolution equation $u_t + A(t)u = 0$ of parabolic type . . . . .	143
J. W. J. Hosken and S. M. Deręowski: Model parameterising and inversion in seismic reflection data processing . . . . .	157
N. N. Kuznetsov: On stable methods for solving nonlinear first order partial differential equations in the class of discontinuous functions . . . . .	183
P. Lesaint: Numerical solution of the equation of continuity . . . . .	199
J. L. Lions: Some remarks on stiff non linear boundary value problems . . . . .	223
Dan Loewenthal: Numerical computation of the roots of poly- nomials by spectral factorization . . . . .	237
W. L. Miranker, M. van Veldhuizen and G. Wahba: Two methods for the stiff highly oscillatory problem . . . . .	257

Tomoyasu Nakagawa and Teruo Ushijima: Finite element analysis of the semi-linear heat equation of blow-up type . . . . .	275
Nabil R. Nassif and J. Descloux: Stability study for time-dependent linear parabolic equations and its application to Hermitian methods . . . . .	293
J. A. Nitsche: On $L_\infty$ -convergence of finite element approximations to the solution of a nonlinear boundary value problem . . . . .	317
Eduardo L. Ortiz: Polynomial condensation in one and several variables with applications . . . . .	327
Philip Rabinowitz: Ignoring the singularity in numerical integration	361
P. Rózsa: A direct method for the numerical solution of elliptic partial differential equations . . . . .	369
M. N. Spijker: The behaviour of error bounds in the numerical solution of initial value problems when the step size $h$ tends to zero . . . . .	383
J. Stoer: Quadratic termination and quadratic convergence of minimization algorithms . . . . .	401
F. G. Tcheremissine: Methods of integration of the Boltzmann kinetic equation . . . . .	417
Sven Treitel, Paul R. Gutowski and Enders A. Robinson: Empirical spectral analysis revisited . . . . .	429
Joel E. Dendy, Jr., Blair Swartz and Burton Wendroff: Computing travelling wave solutions of a nonlinear heat equation . . . . .	447
Masaya Yamaguti and Masayasu Mimura: A method of finite differences for solving a system of semi-linear partial differential equations . . . . .	465
