

CONTENTS

Preface	ix
From the preface to the first edition	xi
1. Introduction	1
1.1 What is numerical analysis?	1
1.2 Numerical algorithms	3
1.3 Properly posed and well-conditioned problems	5
Problems	9
2. Basic analysis	11
2.1 Functions	11
2.2 Limits and derivatives	16
2.3 Sequences and series	26
2.4 Integration	30
2.5 Logarithmic and exponential functions	33
Problems	35
3. Taylor's polynomial and series	39
3.1 Function approximation	39
3.2 Taylor's theorem	40
3.3 Convergence of Taylor series	43
3.4 Taylor series in two variables	46
3.5 Power series	47
Problems	49
4. The interpolating polynomial	52
4.1 Linear interpolation	52
4.2 Polynomial interpolation	54
4.3 Accuracy of interpolation	56
4.4 The Neville–Aitken algorithm	58
4.5 Inverse interpolation	60

4.6	Divided differences	61
4.7	Equally spaced points	65
4.8	Derivatives and differences	70
4.9	Effect of rounding error	72
4.10	Choice of interpolating points	73
4.11	Examples of Bernstein and Runge Problems	77
		78
5.	'Best' approximation	86
5.1	Norms of functions	86
5.2	Best approximations	88
5.3	Least squares approximation	90
5.4	Orthogonal functions	94
5.5	Orthogonal polynomials	100
5.6	Minimax approximation	109
5.7	Chebyshev series	113
5.8	Economization of power series	116
5.9	The Remez algorithms	118
5.10	Further results on minimax approximation Problems	120
		123
6.	Splines and other approximations	131
6.1	Introduction	131
6.2	B-splines	136
6.3	Equally spaced knots	139
6.4	Hermite interpolation	145
6.5	Padé and rational approximation Problems	149
		156
7.	Numerical integration and differentiation	160
7.1	Numerical integration	160
7.2	Romberg integration	169
7.3	Gaussian integration	172
7.4	Indefinite integrals	178
7.5	Improper integrals	179
7.6	Multiple integrals	181
7.7	Numerical differentiation	183
7.8	Effect of errors Problems	188
		191
8.	Solution of algebraic equations of one variable	196
8.1	Introduction	196
8.2	The bisection method	197
8.3	Interpolation methods	198
8.4	One-point iterative methods	202
8.5	Faster convergence	205

8.6	Higher order processes	208
8.7	The contraction mapping theorem	213
	Problems	215
9.	Linear equations	221
9.1	Introduction	221
9.2	Matrices	221
9.3	Linear equations	225
9.4	Pivoting	232
9.5	Analysis of elimination method	236
9.6	Matrix factorization	239
9.7	Compact elimination methods	243
9.8	Symmetric matrices	245
9.9	Tridiagonal matrices	250
9.10	Rounding errors in solving linear equations	252
	Problems	257
10.	Matrix norms and applications	265
10.1	Determinants, eigenvalues and eigenvectors	265
10.2	Vector norms	269
10.3	Matrix norms	271
10.4	Conditioning	277
10.5	Iterative correction from residual vectors	281
10.6	Iterative methods	286
	Problems	292
11.	Matrix eigenvalues and eigenvectors	299
11.1	Relations between matrix norms and eigenvalues; Gerschgorin theorems	299
11.2	Simple and inverse iterative method	303
11.3	Sturm sequence method	308
11.4	The QR algorithm	311
11.5	Reduction to tridiagonal form: Householder's method	315
	Problems	319
12.	Systems of non-linear equations	323
12.1	Contraction mapping theorem	323
12.2	Newton's method	328
	Problems	331
13.	Ordinary differential equations	335
13.1	Introduction	335
13.2	Difference equations and inequalities	340
13.3	One-step methods	346
13.4	Truncation errors of one-step methods	350

13.5	Convergence of one-step methods	351
13.6	Effect of rounding errors on one-step methods	357
13.7	Methods based on numerical integration; explicit methods	358
13.8	Methods based on numerical integration; implicit methods	363
13.9	Iterating with the corrector	369
13.10	Milne's method of estimating truncation errors	370
13.11	Numerical stability	374
13.12	Systems and higher order equations	381
13.13	Comparison of step-by-step methods	386
	Problems	389
14.	Boundary value and other methods for ordinary differential equations	396
14.1	Shooting method for boundary value problems	396
14.2	Boundary value method	397
14.3	Extrapolation to the limit	405
14.4	Deferred correction	406
14.5	Chebyshev series method	409
	Problems	413
	Appendix: Computer arithmetic	418
A.1	Binary numbers	418
A.2	Integers and fixed point fractions	419
A.3	Floating point arithmetic	420
	Problems	422
	Solutions to selected problems	424
	References and further reading	440
	Index	443
