

CONTENTS

Preface	i
Introduction	
1. Brief Summary of the Problems in This Book	1
2. Notation	3
Chapter 1 Testing Problems in GMANOVA and Extended GMANOVA Models	
1. GMANOVA and SUR models	5
2. Testing on Some Covariance Structure	19
3. Identifiability of Hypotheses	34
Chapter 2 Invariance Approach to Testing	
1. A Review on Testing Theory	40
2. Maximality of a Group Leaving a Testing Problem Invariant	49
3. Distribution of a Maximal Invariant	53
4. A Locally Best Invariant (LBI) Test	58
5. Distributions of Test Statistics	60
6. Local Minimavity	62
7. Monotonicity	66
8. Admissibility	67
9. Robustness	69
Chapter 3 The General MANOVA Problem	
1. Problem and History	74
2. A Canonical Form and Invariance	77
3. Maximality of the Group	87
	iii

4.	Essentially Complete Classes via Sufficiency	90
5.	An Essentially Complete Class via Invariance	95
6.	Distributions of Maximal Invariants	100
7.	The Likelihood Ratio Test (LRT) and the Related Tests	103
8.	Locally Best Invariant (LBI) Test	112
9.	Local Minimavity of the LBI Test	119
10.	Distribution of the LBI Test	127
11.	Monotonicity of power of the LRT and LBI test	134
12.	Admissibility and Robustness	136
Chapter 4 Extended GMANOVA problems		
1.	Introduction	141
2.	An Extended GMANOVA Problem	143
3.	Testing on Means with Incomplete Data	154
4.	Testing on Regression Coefficients in a Two Equations SUR Model	159
5.	GMANOVA Problem Under Special Covariance Structure	165
Chapter 5 Tests of Independence in a GMANOVA Model		
1.	Testing on Rao's Covariance Structure	172
2.	Testing Independence with Extra Data	177
3.	LBI Test	180
4.	Local Minimavity of the LBI Test	193
5.	Asymptotic Null Distributions	197
Chapter 6 Tests of Independence in a Two Equations SUR Model		
1.	Motivation and Model	204
2.	LBI Tests	207
3.	The Null Distribution of the LBI Tests	216
Appendix		223
