Preface to the Second Edition	v
Preface to the First Edition	vii
Xtremes: An Overview and the Hierarchy	xi
List of Special Symbols	xix

I Modeling and Data Analysis

1 Parametric Modeling

1.1 Applications of Extreme Value Analysis	3
1.2 Observing Exceedances and Maxima	7
1.3 Modeling by Extreme Value Distributions	14
1.4 Modeling by Generalized Pareto Distributions	23
1.5 Heavy and Fat-Tailed Distributions	30
1.6 Quantiles, Transformations and Simulations	35
1.7 Implementation in Xtremes	39

2 Diagnostic Tools

2.1 Visualization of Data	43
2.2 Excess and Hazard Functions	53
2.3 Fitting Parametric Distributions to Data	60
2.4 Q-Q and P-P Plots	65
2.5 Trends, Seasonality and Autocorrelation	67
2.6 The Auto-Tail-Dependence Function	77
2.7 Clustering of Exceedances	78
2.8 Implementation in Xtremes	82

II Statistical Inference in Parametric Models

3 An Introduction to Parametric Inference

3.1 Estimation in Exponential, Gaussian and Student Models	92
3.2 Confidence Intervals	98
3.3 Test Procedures and p Values	101

3.4	Inference in Poisson and Mixed Poisson Models	105
3.5	The Bayesian Estimation Principle	110
3.6	Implementation in Xtremes	115
4	Extreme Value Models	
4.1	Estimation in Extremes Value Models	117
4.2	Testing Extreme Value Models	128
4.3	Extended Extreme Value Models and Related Models	130
4.4	Implementation in Xtremes	137
5	Generalized Pareto Models	
5.1	Estimation in Generalized Pareto Models	139
5.2	Testing Generalized Pareto Models	153
5.3	Statistics in Poisson-GP Models	155
5.4	Extending Generalized Pareto Models	157
5.5	Implementation in Xtremes	161
6	Advanced Statistical Analysis	
6.1	Non-Random and Random Censoring	163
6.2	Models of Time Series, the Extremal Index	168
6.3	Statistics for Sum-Stable Distributions (coauthored by J.P. Nolan)	174
6.4	Rates of Convergence (coauthored by E. Kaufmann)	183
6.5	Conditional Extremes	190
6.6	Implementation in Xtremes	195
7	Statistics for Poisson Processes	
7.1	Modeling Exceedances by Poisson Processes	197
7.2	Mean and Median T -Year Return Levels	200
7.3	ML and Bayesian Estimation in Models of Poisson Processes	202
7.4	Implementation in Xtremes	207
III Elements of Multivariate Statistical Analysis		
8	Basic Multivariate Concepts and Visualization	
8.1	An Introduction to Basic Multivariate Concepts	211
8.2	Visualizing Multivariate Data	216
8.3	Multivariate Parametric Models	221
8.4	Multivariate Sum-Stable Distributions (coauthored by J.P. Nolan)	224
8.5	Implementation in Xtremes and MVSTABLE	229
9	Multivariate Maxima	
9.1	Nonparametric and Parametric Extreme Value Models	231
9.2	The Gumbel-McFadden Model	240
9.3	Estimation in Extreme Value Models	243
9.4	Implementation in Xtremes	248

10 Bivariate Peaks Over Threshold

(coauthored by M. Falk)

10.1 Nonparametric and Parametric Generalized Pareto Models 249
 10.2 Estimation of the Canonical Dependence Function 254
 10.3 The Point Process Approach to the POT Method 257
 10.4 Implementation in Xtremes 258

IV Topics in Hydrology, Insurance and Finance

11 Flood Frequency Analysis

(coauthored by J.R.M. Hosking)

11.1 Analyzing Annual Flood Series 261
 11.2 Analyzing Partial Duration Series 262
 11.3 Regional Flood Frequency Analysis 267
 11.4 The L -Moment Estimation Method 270
 11.5 A Bayesian Approach to Regional Estimation 274
 11.6 Implementation in Xtremes 276

12 The Impact of Large Claims on Actuarial Decisions

(coauthored by M. Radtke)

12.1 Numbers of Claims and the Total Claim Amount 280
 12.2 Estimation of the Net Premium 283
 12.3 Segmentation According to the Probable Maximum Loss 287
 12.4 The Risk Process and the T -Year Initial Reserve 294
 12.5 Elements of Ruin Theory 300
 12.6 Credibility (Bayesian) Estimation of the Net Premium 302
 12.7 Implementation in Xtremes 305

13 Extreme Returns in Asset Prices

(coauthored by C.G. de Vries and S. Caserta)

13.1 Stylized Facts and Historical Remarks 310
 13.2 Empirical Evidence in Returns Series 313
 13.3 Parametric Estimation of the Tails of Returns 316
 13.4 The Profit/Loss Variable and Risk Parameters 320
 13.5 Evaluating the Value-at-Risk (VaR) 323
 13.6 VaR for a Single Derivative Contract 327
 13.7 The Capital-at-Risk (CaR) 331
 13.8 ARCH and Stochastic Volatility Structures 332
 13.9 Implementation in Xtremes 338

14 Other Important Applications

14.1 Extremal Corrosion Engineering 341
 14.2 About the Longevity of Humans (coauthored by E. Kaufmann) 345
 14.3 Implementation in Xtremes 349

V Case Studies in Extreme Value Analysis

Study 1 Long-Trend Study for Ozone Data from Mexico City (J.A. Villaseñor, H. Vaquera and R.-D. Reiss)	353
Study 2 Models for Extremes of Non-Stationary Pollution Series (S. Coles)	359
Study 3 Low Temperatures, Global Warming? (D. Dietrich and J. Hüsler)	367
Study 4 Extreme Value Theory in Actuarial Consulting: Windstorm Losses in Central Europe (D. Pfeifer)	373
Study 5 Vrancea Earthquakes Using Prior Information (P. van Gelder, D. Lungu and M. Thomas)	379

Appendix: Xtremes and StatPascal

Xtremes and StatPascal Within RiskTec	387
A The Menu System	
A.1 Installation	391
A.2 Becoming Acquainted with the Menu System	392
A.3 Technical Aspects of Xtremes	396
A.4 List of Windows and Xtremes Commands	400
B UserFormula Facilities	405
C The StatPascal Programming Language	
C.1 Programming with StatPascal: First Steps	411
C.2 Plotting Curves	416
C.3 Generating and Accessing Data	419
C.4 Further StatPascal Techniques	422
C.5 StatPascal Runtime Environment	426
Author Index	429
Subject Index	433
Bibliography	441
