Introduction	7
1. Some classical results	9
1.1. Elementary notations	9
1.2. The linear space \mathcal{L}^1 in n dimensions	9
1.3. Stochastic and doubly stochastic maps	11
1.4. The relation \succ	16
1.5. An example: Comparison of Gibbsian states	19
1.6. An example: Localization of spectra for Hermitian matrices	20
1.7. Convexity and the relation \succ	23
1.8. Examples: Some maps and processes	28
1.9. A partial order of m -tuples $\mathbf{a}_1, \dots, \mathbf{a}_m$	31
2. Order structures of matrices	37
2.1. The relation \succ in the space B^1	37
2.2. Some doubly stochastic maps	40
2.3. Convexity and the relation \succ	45
2.4. Another partial order	47
2.5. Further examples: $A^k \triangleright A ^k$ and related inequalities	52
2.6. Miscellaneous	55
3. The order structure in the state space of C^*- and W^*-algebras	58
3.1. Preliminaries	58
3.2. The relation \succ ; definitions and elementary results	60
3.3. Some essential results for W^* -algebras	63
4. The c-ideal	65
4.1. Definition and the existence of the c -ideal	65
4.2. Ky Fan functionals and von Neumann's relation	68
4.3. A centre-valued convex trace	71
4.4. Maximally mixed states (chaotic states)	76
4.5. Technical Lemmata	78
5. The Σ-property	81
5.1. The definition, preliminary remarks	81
5.2. The case of properly infinite projections — type III	82
5.3. The finite case	83
5.4. The universality of the Σ -property for W^* -algebras	85
5.5. A duality theorem, remarks	87
5.6. Positive linear forms on C^* -algebras and the Σ -property	87

6.	The dual structure in W^*-algebras	91
6.1.	Introduction	91
6.2.	Technical preliminaries	92
6.3.	The purely infinite case	94
6.4.	Approximation results	97
6.5.	A characterization of (\mathcal{M}_+, ξ)	105
6.6.	The main theorem	107
6.7.	A special case: Finite W^* -algebras	111
6.8.	Examples for ξ on \mathcal{M}_+	113
