PART 1 SIMPLE ANALYSIS OF COVARIANCE

CHAPTER 1 OVERVIEW OF SOME BASIC STATISTICAL CONSIDERATIONS	3
1.1 Descriptive vs. Inferential Statistics,	3
1.2 Hypothesis Tests and Confidence Intervals,	5
1.3 Elementary Decision Theory,	7
1.4 Generalization of Results,	8
1.5 Experimental Designs,	9
1.6 Summary,	12
CHAPTER 2 REVIEW OF MODELS RELATED TO ANALYSIS OF COVARIANCE	13
2.1 Introduction,	13
2.2 Review of ANOVA and ANOVAR,	15
2.3 Summary,	24
CHAPTER 3 ONE-FACTOR ANALYSIS OF COVARIANCE	25
3.1 Analysis of Covariance Model,	25
3.2 Computation and Rationale,	26
3.3 Adjusted Means,	31
3.4 Numerical Example,	38
3.5 Testing Homogeneity of Regression Slopes,	43
3.6 Summary,	47

CHAPTER 4 ANALYSIS OF COVARIANCE THROUGH LINEAR REGRESSION	48
4.1 Introduction, 48	
4.2 Simple Analysis of Variance through Linear Regression, 48	
4.3 Analysis of Covariance through Linear Regression, 61	
4.4 Computation of Adjusted Means, 65	
4.5 Similarity of ANCOVA to Part and Partial Correlation Methods, 66	
4.6 Homogeneity of Regression Test through General Linear Regression, 67	
4.7 Summary, 69	
CHAPTER 5 MULTIPLE COMPARISON TESTS AND CONFIDENCE INTERVALS	71
5.1 Introduction, 71	
5.2 Two Methods of Expressing Pairwise and Complex Comparisons, 72	
5.3 Concepts of Error Rate, 75	
5.4 Overview of Four Multiple Comparison Procedures, 76	
5.5 Tests on All Pairwise Comparisons: Fisher's Protected LSD Procedure, 82	
5.6 All Pairwise Comparisons: Bryant-Paulson Generalization of Tukey's HSD, 86	
5.7 Planned Pairwise and Complex Comparisons: Dunn-Bonferroni Procedure, 89	
5.8 Any or All Comparisons: Scheffé Procedure, 92	
5.9 Other Multiple Comparison Procedures, 96	
5.10 Summary, 96	
CHAPTER 6 ASSUMPTIONS	98
6.1 Introduction, 98	
6.2 Randomization, 99	

- 6.3 Homogeneity of Within-group Regressions, 102
- 6.4 Statistical Independence of Covariate and Treatment, 105
- 6.5 Fixed Covariate Values Measured without Error, 110
- 6.6 Linearity of Within-group Regressions, 115
- 6.7 Normality of Conditional Y Scores, 116
- 6.8 Homogeneity of Variance of Conditional Y Scores, 117
- 6.9 Fixed Treatment Levels, 121
- 6.10 Summary, 122

CHAPTER 7 DESIGN AND INTERPRETATION PROBLEMS **123**

- 7.1 Introduction, 123
- 7.2 Randomized Designs, 124
- 7.3 Random Assignment of Intact Groups—True Experiment, 136
- 7.4 Random Assignment of Intact Groups—Quasi Experiment, 136
- 7.5 Comparative—Developmental Study, 137
- 7.6 Biased Assignment Experiment, 140
- 7.7 Nonequivalent Group Studies, 142
- 7.8 Summary, 155

PART 2 COMPLEX ANALYSIS OF COVARIANCE

CHAPTER 8 MULTIPLE COVARIANCE ANALYSIS **159**

- 8.1 Introduction, 159
- 8.2 Multiple Covariance Analysis through Multiple Regression, 162
- 8.3 Testing Homogeneity of Regression Planes, 164
- 8.4 Computation of Adjusted Means, 165

- 8.5 Multiple Comparison Procedures for Multiple Covariance Analysis, 166
- 8.6 Summary, 173

CHAPTER 9 NONLINEAR COVARIANCE ANALYSIS 175

- 9.1 Introduction, 175
- 9.2 Methods of Dealing with Nonlinearity, 177
- 9.3 Computation and Example, 180
- 9.4 Summary, 184

CHAPTER 10 COMPLEX EXPERIMENTAL DESIGNS 185

- 10.1 Introduction, 185
- 10.2 Alternatives to One-factor Randomized Group Analysis of Covariance, 185
- 10.3 One-factor Randomized-block Design, 186
- 10.4 One-factor Repeated-measurement Design, 192
- 10.5 Two-factor ANCOVA for Independent Sample Designs, 194
- 10.6 Two-factor ANOVA and ANCOVA for Repeated-measurement Designs, 223
- 10.7 Other Complex Designs, 235
- 10.8 Summary, 235

CHAPTER 11 MULTIVARIATE ANALYSIS OF COVARIANCE 237

- 11.1 Introduction, 237
- 11.2 Bonferroni F Procedure, 238
- 11.3 Multivariate Analysis of Covariance, 239
- 11.4 Computational Example, 242
- 11.5 MANCOVA through Multiple Regression Analysis—Two Groups Only, 248
- 11.6 Issues Associated with Use of Bonferroni F and MANCOVA Procedures, 249
- 11.7 Summary, 252

PART 3 ALTERNATIVES TO ANALYSIS OF COVARIANCE**CHAPTER 12 RANK ANALYSIS OF COVARIANCE****255**

- 12.1 Introduction, 255
- 12.2 Computation: Any Number of Groups, One covariate, 256
- 12.3 Multiple Comparison Tests, 260
- 12.4 Multiple Rank Analysis of Covariance: Any Number of Groups, Any Number of Covariates, 262
- 12.5 Assumptions, 266
- 12.6 Comparison of Rank ANCOVA with Other Procedures, 267
- 12.7 Summary, 269

CHAPTER 13 ANALYSIS OF HETEROGENEOUS REGRESSION CASE: JOHNSON–NEYMAN TECHNIQUE**270**

- 13.1 Introduction, 270
- 13.2 Computation: Two Groups, One Covariate, 272
- 13.3 Multiple Groups, One Covariate, 279
- 13.4 Two Groups, Any Number of Covariates, 280
- 13.5 Any Number of Groups, Any Number of Covariates, 290
- 13.6 Two-factor Designs, 290
- 13.7 Interpretation Problems, 291
- 13.8 Multiple Dependent Variables, 294
- 13.9 Multiple Groups, Multiple Dependent Variables, Any Number of Covariates, 295
- 13.10 Nonlinear Johnson–Neyman Analysis, 295
- 13.11 Correlated Samples, 296
- 13.12 Computer Programs, 297
- 13.13 Summary, 297

CHAPTER 14 ANALYSIS OF NONEQUIVALENT GROUPS: PART I. TRUE-SCORE ANCOVA**298**

- 14.1 Introduction, 298
- 14.2 Effects of Measurement Error in Dependent Variable and in Covariate: Randomized-group Case, 298

- 14.3 Effect of Measurement Error in Covariate: Nonequivalent-group Case, 300
- 14.4 Porter's True-score ANCOVA, 311
- 14.5 True-score ANCOVA—Computational Example, 315
- 14.6 Assumptions, 316
- 14.7 Empirical Example of Unknown Selection, 317
- 14.8 True-score Analysis for Multiple Covariate Case, 318
- 14.9 True-score ANCOVA with Control for Background Variables, 320
- 14.10 Summary, 321

**CHAPTER 15 ANALYSIS OF NONEQUIVALENT GROUPS:
PART II. STANDARDIZED CHANGE-SCORE
ANALYSIS**

323

- 15.1 Introduction, 323
- 15.2 Analysis of Data that Conform to Parallel Mean Growth Model, 326
- 15.3 Fan-spread Model, 326
- 15.4 Computation and Rationale For SCSA, 332
- 15.5 Standardized Change-score Analysis with Control for Background Variables, 339
- 15.6 Nonequivalent Treatment-Group Design Based on Selection after Pretesting, 341
- 15.7 Interpretation Issues, 345
- 15.8 Status of Nonequivalent-Group Studies, 351
- 15.9 Summary, 351
