Chapter I EARLY DEVELOPMENTS: IDEAL GAMES

A. INTRODUCTION, 1

- 1-1. "Three" Meanings of Probability, 2
- 1-2. Historical Perspective, 6

B. CLASSICAL (A PRIORI) PROBABILITY, 8

- 1-3. Definition of Classical Probability, 8
- 1-4. Probability Combinations, 9
 - Mutually exclusive events*, 10
 - Independent events*, 10
 - Compound events: general addition theorems*, 11
 - Conditional probability: multiplication theorem*, 12
- 1-5. Inferred Knowledge, 17
- 1-6. Problems, 20
- 1-7. Combinatorial Analysis, 23
 - Permutations*, 23
 - Stirling's formula*, 24
 - Sampling without replacement*, 26
 - Sampling with replacement*, 26
 - Combinations: binomial coefficients*, 27
 - Binomial distribution formula*, 30
 - Multinomial coefficients*, 35
 - Multinomial distribution formula*, 37

Sampling from subdivided populations without replacement: lottery problem and bridge hands, 39

1-8. Classical Probability and Progress in Experimental Science, 41

Applications in statistical mechanics, 42

Classical statistics, 43

Quantum statistics: bosons and fermions, 43

1-9. Problems, 45

C. EXPERIMENTAL (A POSTERIORI) PROBABILITY, 40

1-10. Definition of Experimental Probability, 49

Number of "equally probable outcomes" meaningless, 51

1-11. Example: Quality Control, 51

1-12. Example: Direct Measurements in Science, 52

Chapter 2 DIRECT MEASUREMENTS: SIMPLE STATISTICS 55

A. MEASUREMENTS IN SCIENCE: ORIENTATION, 55

2-1. The Nature of a Scientific Fact, 55

2-2. Trial Measurements and Statistics, 56

2-3. Random Variation, 59

2-4. Probability Theory in Statistics, 61

2-5. Computed Measurements, 62

2-6. Conclusions, 63

B. BASIC DEFINITIONS: ERRORS, SIGNIFICANT FIGURES, ETC., 63

2-7. Types of Errors, 64

Random (or accidental) error, 64

Systematic error, 67

Precision and accuracy, 68

Discrepancy, 69

Blunders, 69

2-8. Significant Figures and Rounding of Numbers, 69

C. FREQUENCY DISTRIBUTIONS AND PRECISION INDICES, 71

2-9. Typical Distributions, 72

Terminology: types of distributions, 72

2-10. Location Indices, 76

Median, 76

Mode (most probable value), 76

Mean (arithmetic average) m and μ , 76

- 2-11. Dispersion Indices, 79
Range, 79
Quantile, 79
Deviation (statistical fluctuation), 79
Mean (average) deviation, 80
Experimental standard deviation s , 82
Moments, 84
Variance σ^2 : "universe" or "parent" standard deviation σ , 86
Degrees of freedom, 89
Variance: binomial model distribution, 91
Standard deviation in the mean (standard error) s_m , 92
Skewness, 94
Other dispersion indices, 95
Conclusions, 97
- 2-12. Problems, 98

Chapter 3 STATISTICS OF MEASUREMENTS IN FUNCTIONAL RELATIONSHIPS

101

- 3-1. Method of Maximum Likelihood, 103
 p in the binomial distribution, 105
 μ and σ in the normal distribution, 106
 μ in the Poisson distribution, 107
Instrumental parameter, 107
Precision in the maximum likelihood estimate, 108
Standard error σ_m , 109
- 3-2. Propagation of Errors, 109
Nonindependent errors: systematic errors, 110
Random errors, 111
Mean (and fractional mean) deviation, 113
Standard (and fractional standard) deviation, 114
Sum or difference, 116
Product or quotient: factors raised to various powers, 116
Other functions, 118
- 3-3. Different Means, 118
Weighted mean, 118
Weighted dispersion indices, 120
Consistency of two means: the t test, 120
Comparison of precisions in two sets of measurements: the F test, 123

- 3-4. Curve Fitting: Least-Squares Method, 126
 - Best fit of a straight line*, 127
 - Straight line through origin*, 131
 - Best fit of parabola*, 132
 - Best fit of a sine curve*, 133
 - Criterion for choice of functional relation*, 133
- 3-5. Justification of Least-Squares Method from
 - Maximum Likelihood, 135
- 3-6. Data Smoothing, 139
- 3-7. Correlation, 140
 - Correlation coefficient*, 140
 - Covariance*, 143
 - Interpretation*, 144
- 3-8. Inefficient Statistics, 146
 - Location index*, 147
 - Dispersion indices*, 147
 - Standard deviation in the mean (standard error)*, 148
 - Examples*, 148
- 3-9. Conclusions and Design of Experiments, 148
- 3-10. Summary, 150
- 3-11. Problems, 150

Chapter 4 NORMAL PROBABILITY DISTRIBUTION

156

- 4-1. Derivation of the Normal (Gauss) Probability
 - Density Function, 157
 - Shape of the normal frequency curve*, 161
 - Normalization*, 161
- 4-2. Errors in the Normal Approximation, 163
- 4-3. Significance of the Bernoulli Trials in Actual
 - Measurements, 164
 - Elementary errors*, 164
 - Mechanical analog for Bernoulli-type elementary errors in continuous sample space*, 166
 - Characteristics of elementary errors*, 168
- 4-4. The Error Function, 169
 - Standardized variables*, 169
- 4-5. Precision Indices, 170
 - Mean deviation*, 170
 - Standard deviation*, 172
 - Probable error*, 173
 - Confidence limits in general*, 173
- 4-6. Probability for Large Deviations, 175
 - Rejection of a "bad" measurement*, 175
 - Chauvenet's criterion for rejection*, 176
- 4-7. Test of a Statistical Hypothesis: Example, 178

- 4-8. Test of Goodness of Fit of a Mathematical Model, 180
Graphical comparison of frequency curves, 181
Graphical comparison of cumulative distribution functions: probability paper, 181
Skewness and kurtosis, 183
The χ^2 test, 184
- 4-9. Conclusions, 191
- 4-10. Problems, 192

Chapter 5 POISSON PROBABILITY DISTRIBUTION

195

- 5-1. Introduction, 195
Rare events, 196
- 5-2. Derivation of the Poisson Frequency Distribution Function, 197
Shapes of Poisson frequency distributions, 198
Poisson to normal distribution, 199
Normalization, 201
- 5-3. Errors in the Poisson Approximation, 201
- 5-4. Precision Indices, 202
Standard deviation, 202
Fractional standard deviation, 203
Standard deviation in a single measurement, 204
Probable error, 206
Skewness, 207
- 5-5. Significance of the Basic Bernoulli Trials, 207
Two mechanical analogs, 209
- 5-6. Goodness of Fit, 211
Spatial distribution, 212
- 5-7. Examples of Poisson Problems, 213
Deaths from the kick of a mule, 213
Radioactive decay, 215
Counts per unit time: precision, 218
More examples, 221
- 5-8. Composite of Poisson Distributions, 224
Measuring with a background, 224
Precision, 225
- 5-9. Interval Distribution, 227
Dispersion indices, 229
Resolving time: lost counts, 229
Coincidence counting, 230
Conclusions, 231
- 5-10. Problems, 231

SUMMARY
