Preface	xiii
List of Tables	xviii
Glossary	xix
Notations	xxi
34. General Remarks	1
1. Introduction,	1
2. Features of Multivariate Distributions,	2
2.1. Probabilities and Probability Generating Function,	2
2.2. Moments and Moment-Type Generating Functions,	3
2.3. Stirling Numbers and Moments,	5
2.4. Recurrence Relations,	7
2.5. Incomplete Moments,	10
2.6. Conditional Distributions and Moments,	11
3. Discrete Multivariate Families,	12
3.1. Multivariate Discrete Exponential Family,	12
3.2. Multivariate Lagrangian Distributions,	16
3.3. Homogeneous Multivariate Distributions,	19
4. Mixed, Modified, and Truncated Distributions,	20
4.1. Mixture Distributions,	20
4.2. “Inflated” Distributions,	20
4.3. Truncated Distributions,	21
5. Approximations,	22
5.1. Product Approximations,	22
5.2. Estimation and Structural Approximations,	26
6. Log-Concavity of Discrete Multivariate Distributions,	27
Bibliography,	29

35. Multinomial Distributions	31
1. Introduction, 31	
2. Definition and Genesis, 31	
3. Moments and Other Properties, 33	
4. Calculation of Sums of Multinomial Probabilities, 41	
5. Approximations, 44	
6. Estimation, 51	
7. Characterizations, 65	
8. Random Number Generation, 67	
9. Applications of Multinomial Distributions, 69	
10. Incomplete and Modified Multinomial Distributions, 71	
11. Truncated Multinomial Distributions, 72	
12. Mixtures of Multinomials, 77	
13. Compound Multinomial and Markov Multinomial Distributions, 80	
13.1. Compound Multinomial, 80	
13.2. Markov Multinomial, 83	
Bibliography, 84	
36. Negative Multinomial and Other Multinomial-Related Distributions	93
1. Definition, 93	
2. Historical Remarks and Applications, 94	
3. Properties, 98	
4. Moments and Cumulants, 100	
5. Estimation, 102	
6. Dirichlet (Beta-) Compound Negative Multinomial Distribution, 104	
7. Multivariate Bernoulli, Binomial, and Multinomial Distributions, 105	
8. Countable Mixtures of Bivariate Binomial Distributions, 113	
9. Multivariate Geometric Distributions of Order s , 117	
Bibliography, 120	
37. Multivariate Poisson Distributions	124
1. Introduction, 124	
2. Bivariate Poisson Distributions, 124	
3. Distributions Related to Bivariate Poisson, 131	
4. Multivariate Forms, 139	
Bibliography, 147	

38. Multivariate Power Series Distributions	153
1. Introduction, 153	
2. Moments and Other Properties, 155	
3. Estimation, 156	
4. Multivariate Logarithmic Series Distributions, 157	
5. Mixtures of Multivariate Power Series Distributions, 162	
6. Multivariate Sum-Symmetric Power Series Distributions, 165	
7. Equivalent Families of Distributions, 167	
Bibliography, 170	
39. Multivariate Hypergeometric and Related Distributions	171
1. Introduction and Genesis, 171	
2. Distribution and Moments, 171	
3. Truncated Multivariate Hypergeometric Distributions, 177	
4. Related Distributions, 179	
4.1. Multivariate Inverse Hypergeometric and Negative Hypergeometric Distributions, 179	
4.2. Multivariate Generalized Hypergeometric and Unified Multivariate Hypergeometric Distributions, 180	
4.3. Restricted Occupancy Distributions (Equiprobable Multivariate Hypergeometric Distributions), 186	
4.4. "Noncentral" Multivariate Hypergeometric Distributions, 187	
4.5. Multivariate Hypergeometric-Multinomial Model, 188	
4.6. Multivariate Lagrange Distributions, 190	
4.7. Iterated Hypergeometric Distributions, 191	
4.8. Generalized Waring Distributions, 192	
5. Applications to Faulty Inspection, 193	
Bibliography, 197	
40. Multivariate Pólya–Eggenberger Distributions	200
1. Genesis, 200	
2. Distribution, 200	
3. Moments and Mode, 205	
4. Generalizations, 208	
5. Estimation, 209	
6. Special Cases, 210	
7. Polyatomic Multivariate Pólya Distributions, 212	
8. Truncated Multivariate Pólya–Eggenberger Distributions, 217	

- 9. Multivariate Inverse Pólya–Eggenberger Distributions, 219
- 10. Multivariate Modified Pólya Distributions, 224
 - 10.1. Genesis, 224
 - 10.2. Properties, 225
- 11. Multivariate Modified Inverse Pólya Distributions, 226
 - 11.1. Genesis, 226
 - 11.2. Properties, 227
 - Bibliography, 228

41. Multivariate Ewens Distribution 232

- 1. Genesis and History, 232
- 2. Distribution, Moments, and Structural Properties, 233
 - 2.1. Moments, 234
 - 2.2. Urn Models, 235
 - 2.3. Species Deletion (Noninterference), 235
 - 2.4. Characterizations, 235
- 3. Estimation, 236
- 4. Relations with Other Distributions, 237
 - 4.1. The GEM Distribution, 237
 - 4.2. The Pitman Sampling Formula, 237
- 5. Approximations, 238
- 6. Applications, 239
 - 6.1. Genetics, 239
 - 6.2. Bayesian Statistics, 239
 - 6.3. Permutations, 239
 - 6.4. Ecology, 240
 - 6.5. Physics, 240
 - 6.6. The Spread of News and Rumors, 241
 - 6.7. The Law of Succession, 241
 - 6.8. Prime Numbers, 242
 - 6.9. Random Mappings, 242
 - 6.10. Combinatorial Structures, 242
 - Bibliography, 242

42. Multivariate Distributions of Order s 247

- 1. Multivariate Geometric Distributions of Order s , 247
- 2. Multivariate Distributions in Correlated Binary Variables, 251
 - 2.1. Markov Dependence, 251

2.2. Binary Sequences of Order s ,	253
3. Multivariate Negative Binomial Distributions of Order s ,	255
4. Multivariate Poisson Distributions of Order s ,	259
5. Multivariate Logarithmic Series Distributions of Order s ,	260
6. Multinomial Distributions of Order s ,	263
7. Multivariate Pólya and Inverse Pólya Distributions of Order s ,	263
Bibliography,	265
43. Miscellaneous Distributions	269
1. Multivariate Occupancy Distributions,	269
1.1. Introduction,	269
1.2. Distributions and Moments,	269
2. Multivariate Mixture Distributions,	271
3. Generalizations,	272
4. Multivariate Generalized (Random Sum) Distributions,	273
5. Multivariate Weighted Distributions,	275
6. Discrete Dirichlet Distributions,	278
7. Discrete Normal Distributions,	279
Bibliography,	281
Abbreviations	283
Author Index	285
Subject Index	293
