Preface	xiii
I GENERAL THEORY	1
Note	2
Chapter 1. Univariate Stochastic Orders	3
1.A. The Usual Stochastic Order	3
1.B. The Hazard Rate Order	12
1.C. The Likelihood Ratio Order	27
1.D. The Mean Residual Life Order	42
1.E. Complements	48
References	51
Chapter 2. Univariate Variability Orders	55
2.A. The Convex Order	55
2.B. The Dispersive Order	69
2.C. The Peakedness Order	77

2.D. Complements	79
References	81

Chapter 3. Univariate Monotone Convex and Related Orders **83**

3.A. The Monotone Convex and Monotone Concave Orders	83
3.B. The Laplace Transform, Moment Generating Function, and Related Orders	95
3.C. Transform Orders: The Convex, Star, and Superadditive Orders	105
3.D. Complements	108
References	110

Chapter 4. Multivariate Stochastic Orders **113**

4.A. Notations and Preliminaries	113
4.B. The Usual Multivariate Stochastic Order	114
4.C. The Cumulative Hazard Order	126
4.D. The Multivariate Hazard Rate Order	130
4.E. The Multivariate Likelihood Ratio Order	132
4.F. The Multivariate Mean Residual Life Order	137
4.G. Other Multivariate Stochastic Orders	140
4.H. Complements	147
References	149

Chapter 5. Multivariate Variability and Related Orders **153**

5.A. The Monotone Convex and Monotone Concave Orders	153
5.B. Multivariate Dispersion Orders	161
5.C. The Multivariate Laplace Transform, Moment Generating Function, and Related Orders	164
5.D. Complements	168
References	168

Chapter 6. Stochastic Convexity and Concavity **171**

6.A. Regular Stochastic Convexity	171
6.B. Sample Path Convexity	179
6.C. Convexity in the Usual Stochastic Order	186
6.D. Strong Stochastic Convexity	190
6.E. Complements	192

Contents	ix
References	193
II APPLICATIONS IN STATISTICS	195
Chapter 7. Some Applications of Multivariate Variability Orders	197
<i>Y. L. Tong</i>	
7.A. Variability Orders Through Majorization Order	198
7.B. Peakedness Order	210
References	218
Chapter 8. Statistical Inference for Stochastic Ordering	221
<i>Bhaskar Bhattacharya and Richard L. Dykstra</i>	
8.A. Introduction	221
8.B. Least Squares Projections	222
8.C. Maximum Likelihood Estimation of Regular Stochastic Order: Univariate UnCensored Data	223
8.D. Hazard Rate Ordering	233
8.E. Multivariate Stochastic Ordering	237
8.F. Hypothesis Testing	241
8.G. Hypothesis Testing: Hazard Rate Orderings	245
References	248
Chapter 9. Association and Unbiased Tests in Statistics	251
<i>Arthur Cohen and H. B. Sackrowitz</i>	
9.A. Introduction	251
9.B. Preliminaries	252
9.C. Association	254
9.D. Statistical Models and Null Hypotheses to Be Tested	257
9.E. Alternative Hypotheses—One-Sided	259
9.F. Alternative Hypothesis—Two-Sided	266
9.G. Normal Models	268
9.H. Remarks	272
References	273
Chapter 10. Information Orderings and Stochastic Orderings	275
<i>Erik Torgersen</i>	

10.A.	Introduction	275
10.B.	Examples Indicating Relationships between Statistical Decision Theory and Stochastic Orderings	278
10.C.	The Mathematical Framework of (Nonsequential) Statistical Decision Theory	288
10.D.	Criteria for Approximate Comparison	300
10.E.	Standard Experiments, Laws of Likelihoods	307
10.F.	Functionals of Experiments	314
	References	318

III APPLICATIONS IN BIOLOGY 321

Chapter 11. Stochastic Ordering of Epidemics 323

Claude Lefèvre

11.A.	Introduction	323
11.B.	Epidemics over a Short Time Horizon	325
11.C.	Carrier-Borne Epidemics	331
11.D.	Epidemics for S-I-R Infectious Diseases	341
	References	347

IV APPLICATIONS IN ECONOMICS 349

Chapter 12. Comparing Risk and Risk Aversion 351

Marco Scarsini

12.A.	Introduction	351
12.B.	Risk Aversion	353
12.C.	Increasing Risk	356
12.D.	Playing the Lottery and Buying Insurance	361
12.E.	Partial Insurance	363
12.F.	Comparative Statics Results	366
12.G.	Portfolio Theory	368
12.H.	Multivariate Risk and Risk Aversion	372
12.I.	Conclusion	375
	References	376

V APPLICATIONS IN OPERATIONS RESEARCH 379**Chapter 13. Scheduling 381***Rhonda Righter*

13.A. Introduction	381
13.B. Definitions	383
13.C. The Bivariate Characterization and Permutation Strategies	384
13.D. Stochastic Coupling	398
13.E. Exponential Processing Times	416
13.F. Job Weights as Probabilities and the $c\mu$ Rule	423
References	428

Chapter 14. Stochastic Comparisons in Closed Jackson Networks 433*J. George Shanthikumar and David D. Yao*

14.A. Introduction	433
14.B. Likelihood Ratio Ordering: Monotonicity	435
14.C. Shifted Likelihood Ratio Ordering: Monotonicity	443
14.D. Concavity/Convexity and Supermodularity	447
14.E. Arrangement and Majorization Orderings	454
14.F. Bibliographical Notes	458
References	459

VI APPLICATIONS IN RELIABILITY THEORY 461**Chapter 15. Comparison of Maintenance Policies 463***Henry W. Block and Thomas H. Savits*

15.A. Introduction	463
15.B. Replacement Policies	464
15.C. Early Results on Maintenance Comparisons	466
15.D. Other Early Results	467
15.E. Results of Marshall and Proschan	467
15.F. Process Comparison: Preliminaries	469
15.G. Process Comparison: Block Replacement	471
15.H. Process Comparison: Repair Replacement	475
15.I. Comparisons Involving Renovations	479
15.J. Comparisons between Age and Block	482
References	483

Chapter 16. Stochastic Order in System Reliability Theory 485*Philip J. Boland and Frank Proschan*

16.A.	An Introduction to System Reliability Theory	485
16.B.	The Hazard Rate Ordering and Coherent Systems	487
16.C.	Active and Standby Redundancy Improvements to a Coherent System	490
16.D.	Optimal Allocation of Resources in Series and Parallel Systems	495
16.E.	Stochastic Comparisons of Order Statistics from Heterogeneous Populations with Proportional Hazards	499
16.F.	Software Reliability	503
	References	507
	Author Index	509
	Subject Index	515
