

C O N T E N T S

Preface	ix
1. Mathematics Preliminaries	3
1.1 Matrix Definitions and Operations	3
1.2 Additional Matrix Definitions, Notation, and Results	5
1.3 Inverses and Linear Equation Systems	10
1.4 Some Multivariable Calculus	11
1.5 Miscellaneous Results	16
Exercises	18
References	20
2. Univariate Statistics Preliminaries	21
2.1 Random Variables	21
2.2 Sampling Theory	25
Exercises	28
References	29
3. Multivariate Distributions	31
3.1 Joint Distributions	32
3.2 Marginal Probability Distributions	33
3.3 Conditional Probability Distributions	34
3.4 Means, Variances, Covariances	38
3.5 Correlation Coefficients	45
3.6 Multivariate Normal Distribution	51
3.7 Other Multivariate Distributions	62
Exercises	64
References	66
4. Sampling from Multivariate Distributions	67
4.1 Descriptive Statistics	68
4.2 Sampling from the Multivariate Normal Distribution	73
4.3 Some Sampling Distributions	74
4.4 Maximum Likelihood Estimates of μ , Σ , and Γ	78
Exercises	82
References	83
5. Mean Vectors and Covariance Matrices	85
5.1 Hotelling's T^2	85
5.2 Confidence Regions for μ	86
5.3 Hypothesis Test for $\mu = \mu_0$	88

5.4	One-Way Multivariate Analysis of Variance (MANOVA)	91
5.5	Multivariate General Linear Model	97
5.6	Hypothesis Tests for Covariance Matrices	116
5.7	The Behrens-Fisher Problem	122
5.8	Union-Intersection Hypothesis Testing	126
5.9	Other Statistics	130
	Exercises	131
	References	132
6.	Correlations	135
6.1	Correlation Coefficients	135
6.2	Partial Correlation Coefficients	141
6.3	The Multiple Correlation Coefficient	143
6.4	Canonical Correlation	144
	Exercises	155
	References	157
7.	Discriminant Analysis and Allocation	159
7.1	Example	159
7.2	Two Populations and Known Distributions	161
7.3	Two Populations and Unknown Parameters	166
7.4	Fisher's Procedure	169
7.5	The Sample Discriminant Function and Sample Regression	170
7.6	More Than Two Populations	172
7.7	Likelihood Ratio Approach	178
7.8	Confusion Matrices	179
7.9	Error Rates with Two Groups	180
7.10	Derivation of Allocation Regions for Two Populations	187
	Exercises	187
	References	188
8.	Principal Components Analysis	191
8.1	Population Principal Components	191
8.2	Properties and Characteristics	195
8.3	Sample Principal Components	203
8.4	Regression and Principal Components	214
	Exercises	223
	References	224
9.	Factor Analysis	225
9.1	The Factor Analysis Model	225
9.2	The Principal Factor Solution	230
9.3	The Maximum Likelihood Method	240
9.4	Rotation of Factors	241
9.5	Factor Scores	243
9.6	Example	244
	Exercises	247
	References	247
10.	Cluster Analysis	249
10.1	Hierarchical Clustering	250
10.2	Nonhierarchical Clustering	258
	Exercises	259
	References	260

11. Discrete Multivariate Analysis	261
11.1 Log-Linear Model for the 3-Way Table	261
11.2 Fourfold Table	265
11.3 Hierarchical Hypotheses	266
11.4 Statistical Analysis for the 3-Way Table	270
11.5 Statistical Analysis for the p -Way Table	279
11.6 Other Topics	283
Exercises	283
References	285
Appendix. Statistical Tables and Charts	287
Index	301
