<i>Acknowledgements</i>		viii
1	THE POISSON DISTRIBUTION	1
1.1	Introduction	1
1.2	Properties of Poisson variates	2
1.3	Inferences about μ	5
2	SINGLE CLASSIFICATIONS	7
2.1	Response	7
2.2	Homogeneity	8
2.3	Large-sample tests	12
2.4	Cycles	14
2.5	Goodness of fit	15
3	TWO-WAY CLASSIFICATIONS	19
3.1	Contingency tables	19
3.2	Variation of response	23
3.3	Association between responses	26
3.4	Contingency tables with given margins	30
4	2×2 TABLES	33
4.1	Hypergeometric distribution	33
4.2	Extended hypergeometric distribution	34
4.3	Sample cross-product ratio	37
4.4	Estimation of λ	38
4.5	Hypotheses about λ	42
4.6	Bayesian analysis	45
5	$r \times s$ TABLES	48
5.1	Distribution theory	48
5.2	Estimation of λ	51
5.3	Hypotheses about λ	54
5.4	Partitions of chi-square	57
5.5	Symmetric tables	59
5.6	Incomplete tables	62

6	MODELS AND METHODS	65
6.1	Statistical models	65
6.2	Logit regression	67
6.3	Linear models	70
6.4	Log-linear models	73
7	THREE-WAY CLASSIFICATIONS	77
7.1	Three-dimensional contingency tables	77
7.2	Association of three responses	79
7.3	Distribution theory	83
7.4	Experiments involving factors	85
7.5	Estimation and test procedures	88
7.6	Numerical examples	92
8	MATCHING	97
8.1	Designs and hypotheses	97
8.2	Matched sets	100
8.3	Efficiency of matched pairs for binary data	103
9	MULTIVARIATE DATA	106
9.1	Multidimensional contingency tables	106
9.2	Principles of analysis	107
9.3	Multivariate binary data	110
9.4	Allocation rules	111
9.5	Numerical example	113
	<i>Exercises</i>	115
	<i>References</i>	140
	<i>Author Index</i>	151
	<i>Subject Index</i>	155
	<i>Experiment Index</i>	159
