

# TABLE OF CONTENTS

## Chapter

I.	THE PROBLEM OF REPRESENTING SOCIOMETRIC DATA . . . . .	1
	Existing Representations of Sociometric Data	
	Unfolding Theory	
	Nonmetric Multidimensional Scaling	
	Scaling Sociometric Data: Overview	
II.	DESCRIPTION OF THE ALGORITHM . . . . .	13
	Development of the Iterative Algorithm	
	A Linear Programming Addition to the Algorithm	
	The Augmented Algorithm	
III.	SOME FORMAL PROPERTIES AND LIMITATIONS OF THE METHOD . . . . .	40
	Some Limiting Cases	
	Degenerate Solutions	
	Local Minima	
IV.	APPLICATIONS OF THE METHOD TO ARTIFICIAL DATA . . . . .	52
	Characteristics of the Artificial Data	
	The Process for Obtaining Configurations for the Artificial Data	
	Evaluating the Quality of a Calculated Configuration	
	Recovering Missing Data	
	Estimating the Dimensionality of Random Rank Orders	
	Characteristics of the Algorithm: Conclusions	
V.	ANALYZING SOCIOMETRIC DATA . . . . .	79
	Unfolding Sociometric Data	
	The Rooming House Study	
	Preparing the Data	
	Geometric Representations of the Rooming House Data	
	Geometric Representations for the Reduced Groups	
	Interpreting the Geometric Representations	
	Distances Between Object Points	
	Distances Between Ideal Points	
	Distances Between Ideal Points and Object Points	
	Intrapersonal Separations	
	Some Final Comments	
APPENDICES	. . . . .	122
BIBLIOGRAPHY	. . . . .	127
