**Preface xi**

## **1 Review of Statistical Concepts 1**

**Probability Theory 1** Mathematical Concepts of  
Probability 1 Applied Probability Theory 2

**Distribution Theory 3** Joint Distributions 4

Summary Values 4 Covariance and Correlation 6

**Sampling 7** Point Estimation 7 Hypothesis

Testing 8 Power 9

**Summation 9**

**Notation 10**

## **2 Important Distributions 12**

**The Normal Distribution 12**

**Distributional Notation 13**

**Chi-Square 14**

**Noncentral Chi-Square 15**

***t* Distribution 16**

***F* Distribution 17**

**Noncentral *F* 17**

**Tables and Interpolation 18**

### 3 Analysis of Variance: One-way, Fixed Effects 20

#### Assumptions 20

**Analysis: Equal Sample Sizes** 22    Mean Square Within 23    Mean Square Between 24    Mean Square Total 25    The  $F$  Test 26    Expected Values of Mean Square Within and Between 27

**Robustness of  $F$**  31    Effects of Nonnormality 31  
Unequal Variances 32    Independence of Observations 35

#### Power of the $F$ Test 36

#### Computational Formulas 37

**Analysis: Unequal Sample Sizes** 39    Computational Formulas 42    Power of  $F$  with Unequal Sample Sizes 42    Robustness of  $F$  with Unequal Sample Sizes 43

#### Other Possible $F$ Tests 44

#### Exercises 47

### 4 Comparing Groups 51

#### Proportion of Variance Accounted For 51

#### Graphs and Figures 54

**Planned Comparisons** 55    General Theory 57  
Confidence Intervals for Planned Comparisons 60  
Necessary Assumptions and Their Importance 60  
Independent Hypotheses 63    Relationship to Ordinary  $F$  67    Interpreting Multiple Significance Tests 70  
Planned Comparisons and the Grand Mean 71     $\omega^2$  for Planned Comparisons 72

**Post Hoc Comparisons** 73    Adjusted Significance Levels 73    Fisher's Method 74    The Scheffé Method 74    Relationships Between  $S$  and  $F$  77  
The  $T$  Method of Post Hoc Contrasts 77    Relationship of the  $T$  Method to an Overall Test of Significance 78  
Increasing the Power of Post Hoc Comparisons 79  
Comparison of the  $S$  and  $T$  Methods 83    Critique of the  $S$  and  $T$  Methods 83    Other Post Hoc Comparison Methods 84    Confidence Intervals for Individual Means 84

#### Exercises 84

## 5 Two-way Analysis of Variance 88

- Main Effects 88**    The A Main Effect 89
- The B Main Effect 89    Relationships to  
Planned Comparisons 92
- Interaction 92**    The Model Equation 94
- Interaction Mean Square 94    Interpreting  
Interaction 97
- Interpreting Main Effects 97**
- Simple Effects 98**    Simple Tests on Means 99
- Computational Formulas 100**
- Unequal Sample Sizes 100**
- Expected Mean Squares 102**
- Power of the Tests 104**
- Robustness of the Tests 104**
- Transformations on the Data 105**
- Pooling Sums of Squares 106**
- One Observation Per Cell 108**
- Exercises 108**

## 6 Random Effects 112

- One-way Model 112**    Model Equation and  
Assumptions 113    Characteristics of Random  
Effects 114    Mean Squares 115    Comparison  
with the Fixed-Effects Model 116    The  $F$  Test 117
- Importance of Assumptions 119    Hypotheses about  
the Grand Mean 120
- Two-way Model 121**    The Model and the  
Assumptions 124    Expected Mean Squares and  
 $F$  Ratios 127    Note on Terminology 133
- Robustness 133    Variance Estimates 134    Power  
Calculations 135    Pooling Sums of Squares 135
- Planned and Post Hoc Comparisons 136    Contrasts  
136
- Exercises 138**

## 7 Higher-way Designs 143

- Kinds of Models 147**
- Assumptions 147**
- Mean Squares 149**    Rules for Calculating Sums of  
Mean Squares 149    Rules for Calculating Degrees

of Freedom and Mean Squares 151

**Expected Mean Squares 151**

**F Ratios and Variance Estimates 154** Pooling Sums  
of Squares 154 One Observation per Cell 155

Quasi-F Ratios 155 Box's Correction 156

**Comparisons 156** Standard Method 156

Analyzing Planned Comparisons 160 Approximate

Planned Comparisons 162 Exact Planned

Comparisons—Special Cases 163

**Exercises 164**

## **8 Nested Designs 166**

**Two-way Model 168** Sums of Squares and Degrees  
of Freedom 170 Models 171 Assumptions  
173

**Higher-way Models 173** The Model Equations

176 Sums of Squares and Degrees of Freedom 178

Expected Mean Squares 180 F Ratios 182

Variance Estimates 182 Assumptions and Box's

Correction 183 Power 185 Comparisons

185 Treating Error as a Random Effect 187

**Exercises 189**

## **9 Other Incomplete Designs 196**

**Two-Factor Designs—Incomplete Blocks 198**

Balanced Incomplete Blocks 199

**Three-Factor Designs 206** Youden Squares 206

Latin Squares 209 Repeated Balanced Incomplete  
Blocks 210

**Higher-way Designs 214**

**Exercises 216**

## **10 One-way Designs with Quantitative Factors 220**

**Trend Analysis of One-way Fixed Effects 221** The  
Model Equation 221 Linear Trend 223 Higher-  
Order Trends 225

**One Observation Per Cell 234** Trend Test 235

Estimating Trends 238

**Appendix 313**

- Table A-1.** Upper-tail significance levels of the standard normal distribution.
- Table A-2.** Values of the standard normal distribution for selected two-tailed significance levels.
- Table A-3.** Values of the chi-square distribution for selected one-tailed significance levels.
- Table A-4.** Values of the  $t$  distribution for selected two-tailed significance levels.
- Table A-5.** Values of the  $F$  distribution for selected one-tailed significance levels.
- Table A-6.** Upper  $\alpha$  point of Studentized range, for  $\alpha = 0.01$ ,  $\alpha = 0.05$ , and  $\alpha = 0.10$ .
- Table A-7.** Coefficients of orthogonal polynomials.
- Table A-8.** Arcsin transformation ( $Z = 2 \arcsin R$ ).
- Table A-9.** Inverse arcsin transformation ( $Z$  to  $R$ ).
- Table A-10.** Curves of constant power for selected numerator degrees of freedom,  $\nu$ .

**List of Symbols 330****Bibliography 335****Index 343**
