

Contents

Chapter 0	Introduction.....	1
Chapter 1	Undominated experiments.....	6
1.1.	Majorized experiments and their decomposition.....	6
1.2.	Weakly dominated experiments.....	11
1.3.	Examples.....	15
1.4.	Bibliographical notes.....	18
Chapter 2	PSS, pivotal measure and Neyman factorization..	21
2.1.	PSS and pivotal measure for majorized experiments..	21
2.2.	Generalizations of the Neyman factorization theorem.....	25
2.3.	Neyman factorization and pivotal measure in the case of weak domination.....	29
2.4.	Dominated case.....	35
2.5.	Bibliographical notes.....	37
Chapter 3	Structure of pairwise sufficient subfield and PSS.....	39
3.1.	Discrete experiment case.....	39
3.2.	Majorized experiment case.....	48
3.3.	Burkholder problem of sufficiency and completions..	53
3.4.	Bibliographical notes.....	57
Chapter 4	The Rao-Blackwell theorem and UMVUE.....	59
4.1.	Rao-Blackwell theorem for PSS in weakly dominated experiments.....	59
4.2.	Converse of a theorem of Lehmann and Scheffé.....	70
4.3.	Bibliographical notes.....	75
Chapter 5	Common conditional probability for PSS and its applications.....	77
5.1.	Deficiency.....	78
5.2.	Representation of M -space of majorized experiment..	82
5.3.	Representation of the common conditional probability for PSS by (T)-integral.....	93
5.4.	Application of the extended notion of common conditional probability for PSS subfield.....	97
5.5.	Bibliographical notes.....	105

Chapter 6	Structure of pivotal measure.....	108
6.1.	Minimal L -space.....	108
6.2.	Maximal orthogonal system and pivotal measure....	113
6.3.	Bibliographical notes.....	117
