Preface	ix
1 The scope of survival analysis	1
1.1 Introduction	1
1.2 The definition of failure times	2
1.3 Censoring	4
1.4 Other methods of analysis	5
1.5 Some examples	6
1.6 Computing	9
Bibliographic notes, 1	10
Further results and exercises, 1	11
2 Distributions of failure time	13
2.1 Introduction	13
2.2 Hazard function	14
2.3 Some special distributions	16
2.4 Comparison of distributions	24
Bibliographic notes, 2	28
Further results and exercises, 2	28
3 Parametric statistical analysis: single sample	32
3.1 Introduction	32
3.2 The likelihood function	32
3.3 Likelihood theory: general considerations	34
3.4 Exponentially distributed failure times	37
3.5 Proportional hazards family	40
3.6 Likelihood estimation for the Weibull distribution	41
3.7 A test for exponentiality	43
Bibliographic notes, 3	45
Further results and exercises, 3	45

4	Single-sample nonparametric methods	48
4.1	Introduction	48
4.2	Product-limit estimator	48
4.3	Greenwood's formula	50
4.4	Actuarial estimator	53
4.5	Cumulative hazard estimators: goodness of fit	56
4.6	Bayesian nonparametric methods	57
	Bibliographic notes, 4	58
	Further results and exercises, 4	59
5	Dependence on explanatory variables: model formulation	62
5.1	Introduction	62
5.2	Accelerated life model	64
5.3	Proportional hazards model	70
5.4	Nonmultiplicative hazard-based model	73
5.5	Transferred origin model	75
5.6	Accelerated onset model	75
5.7	Treatments with a transient effect	76
5.8	Discussion	77
	Bibliographic notes, 5	77
	Further results and exercises, 5	78
6	Fully parametric analysis of dependency	80
6.1	Introduction	80
6.2	Exponential distribution	81
6.3	Accelerated life model	85
6.4	Proportional hazards model	87
6.5	Sensitivity analysis	87
6.6	Some less formal methods	88
	Bibliographic notes, 6	89
	Further results and exercises, 6	90
7	Proportional hazards model	91
7.1	Introduction	91
7.2	The likelihood function	91
7.3	The derivatives of the log likelihood	95
7.4	Log linear hazards	96
7.5	An example	98
7.6	Discrete failure times: ties	101
7.7	The two-sample problem	104

7.8	Estimation of baseline functions: goodness of fit	107
	Bibliographic notes, 7	109
	Further results and exercises, 7	110
8	Time-dependent covariates	112
8.1	Introduction	112
8.2	Some applications of time-dependent covariates	112
8.3	The likelihood function	116
8.4	Partial likelihood	118
8.5	Efficiency comparisons with fully parametric models	120
8.6	Two-sample tests	123
8.7	Rank tests and the accelerated life model	125
8.8	Sampling the risk set	128
8.9	An example	129
	Bibliographic notes, 8	139
	Further results and exercises, 8	139
9	Several types of failure	142
9.1	Introduction	142
9.2	Some key relations	143
9.3	Statistical analysis for independent competing risks	147
9.4	Proportional hazards	148
9.5	Marked failures	151
	Bibliographic notes, 9	153
	Further results and exercises, 9	153
10	Bivariate survivor functions	156
10.1	Introduction	156
10.2	A 'shock' model	157
10.3	A continuous bivariate survival model	158
10.4	Testing for independence	161
10.5	Nonparametric estimation	162
10.6	Tests for equality of marginal distribution	162
	Bibliographic notes, 10	163
	Further results and exercises, 10	163
11	Self-consistency and the EM algorithm	165
11.1	Introduction	165
11.2	Some illustrations of the EM algorithm	166
11.3	Behaviour of the algorithm: self-consistency	171

11.4 Exponential families	173
11.5 Application to grouped multinomial likelihoods	175
11.6 Other schemes of observation	177
Bibliographic notes, 11	179
Further results and exercises, 11	180
References	183
Author index	195
Subject index	198
