Introduction	1
Outline of the Book	11
1 Viability Theorems for Ordinary and Stochastic Differential Equations	19
1.1 Viability & Invariance Properties	23
1.2 Nagumo Theorem	26
1.3 Numerical Schemes	32
1.4 Replicator Systems	34
1.5 Stochastic Viability and Invariance	44
1.5.1 Stochastic Tangent Sets	44
1.5.2 Stochastic Viability	44
1.5.3 Necessary Conditions	46
1.5.4 Sufficient Conditions for Stochastic Invariance .	47
2 Set-Valued Maps	53
2.1 Semicontinuous Set-Valued Maps	54
2.1.1 Definitions	54
2.1.2 Continuity Concepts	56
2.2 Closed Set-Valued Maps	60
2.2.1 Upper Semicontinuity of Closed Maps	60
2.2.2 Marchaud Maps	61
2.3 Support Functions	62
2.4 Convergence Theorem	65
2.5 Closed Convex Processes	70

3	Viability Theorems for Differential Inclusions	77
3.1	Solution Class	79
3.2	Viability Domains	83
3.2.1	Definition of Viability Domains	84
3.2.2	Subnormal Cones	85
3.2.3	Dual Characterization of Viability Domains	85
3.3	Statement of Viability Theorems	88
3.4	Proofs of the Viability Theorems	92
3.5	Solution Map	101
3.5.1	Upper Semicontinuity of Solution Maps	101
3.5.2	Closure of a Viability Domain	103
3.5.3	Reachable Map	104
3.5.4	Representation Property	105
3.6	Stability of Viability Domains	106
3.7	ω -Limit Sets and Equilibria	109
3.7.1	ω -Limit Sets	109
3.7.2	Cesaro means of the velocities	112
3.7.3	Viability implies Stationarity	113
3.8	Chaotic Solutions to Differential Inclusions	117
4	Viability Kernels and Exit Tubes	119
4.1	Viability Kernels	121
4.1.1	Existence of the Viability Kernel	121
4.1.2	Permanence and Fluctuation	125
4.1.3	Viability Envelopes	130
4.2	Hitting and Exit Tubes	131
4.2.1	Hitting and Exit Functionals	132
4.2.2	Hitting and Exit Functions	134
4.2.3	Exit Tubes	137
4.3	Anatomy of a Set	140
4.3.1	Contingent Cone to the Boundary	140
4.3.2	Strict Invariance	142
4.3.3	Inward and Outward Areas	145
4.3.4	Boundary of Viability Kernels	146
4.4	Viability Domain Algorithms	147
4.4.1	Viability Kernel Algorithm	147
4.4.2	Global Contingent Sets	148
4.4.3	Viability Domain Algorithm	151

4.4.4	Fast Viability Kernel Algorithm	152
4.5	Finite-Difference Approximation of Viability Kernels .	153
4.5.1	Viable Subsets under a Discrete System	153
4.5.2	Finite-Difference Approximations	154
5	Invariance Theorems for Differential Inclusions	157
5.1	External Contingent Cones	158
5.1.1	External Contingent Cones	158
5.1.2	Sleek Subsets	160
5.1.3	Tangent Cones to Convex Sets	162
5.1.4	Calculus of Contingent Cones	163
5.1.5	Inequality Constraints	166
5.2	Invariance Domains	167
5.3	Invariance Theorem	170
5.3.1	Filippov's Theorem	170
5.3.2	Characterization of Local Invariance	173
5.3.3	Graphical Lower Limits of Solution Maps	174
5.3.4	Accessibility Map	176
5.3.5	Proof of Convergence of the Fast Viability Kernel Algorithm	178
5.4	Invariance Kernels	182
5.4.1	Existence of the Invariance Kernel	182
5.4.2	Complement of the Invariance Kernel	183
5.4.3	Stability of Invariance Domains	184
5.4.4	Global Exit and Hitting Functions	185
5.4.5	Invariance Envelopes	186
5.5	Boundaries of Viability and Invariance Kernels	188
5.5.1	Semipermeability of the Boundary of the Viability Kernel	188
5.5.2	Viability of the Boundary of the Invariance Kernel	190
5.6	Defeat and Victory domains of a Target and its Barrier	190
5.7	Linear Differential Inclusions	193
5.7.1	Viability Cones	193
5.7.2	Projection on the sphere	195
5.7.3	Projection on a compact sole	196
5.7.4	Duality between Viability and Invariance	198

6	Regulation of Control Systems	199
6.1	Regulation Map	201
6.2	A Simple Economic Example.	204
6.3	Lower Semicontinuity Criteria	211
6.4	Lower Semicontinuity of the Regulation Map	216
	6.4.1 General State Constraints	216
	6.4.2 Output Dependent Constraints	217
	6.4.3 Output Regulation Map	219
	6.4.4 Duality Criterion	220
	6.4.5 Decoupling the Regulation Map	221
6.5	Selection Theorems	223
	6.5.1 Minimal Selection	223
	6.5.2 Selection Procedures	224
	6.5.3 Michael's Selection Theorem	228
6.6	Closed-Loop Controls and Slow Solutions	228
	6.6.1 Continuous Closed Loop Controls	228
	6.6.2 Slow Viable Solutions	229
	6.6.3 Other Selections of Viable Solutions	231
	6.6.4 Examples of Selection of Viable Solutions	233
7	Smooth and Heavy Viable Solutions	235
7.1	Contingent Derivatives	240
7.2	Smooth Viable Solutions	242
	7.2.1 Regularity Theorem	242
	7.2.2 Subregulation and Metaregulation Maps	247
7.3	Second Order Differential Inclusions	253
7.4	Metaregulation Map of High Order	256
7.5	Punctuated Equilibria, Ramp Controls and Polynomial Open-Loop Controls	259
7.6	Heavy Viable Solutions	261
	7.6.1 Dynamical Closed Loops	261
	7.6.2 Heavy Viable Solutions	263
	7.6.3 Heavy Viable Solutions under Equality Constraints	265
	7.6.4 Heavy Viable Solutions of High Order	267

8	Partial Differential Inclusions of Tracking Problems	275
8.1	The Tracking Property	282
8.1.1	Characterization of the Tracking Property . . .	283
8.1.2	Construction of trackers	286
8.1.3	The Observation Problem	287
8.1.4	Construction of Observers	291
8.2	The Tracking Problem	292
8.2.1	Tracking Control Systems	292
8.2.2	Decentralization of a control system	293
8.2.3	Hierarchical Decomposition Property	295
8.3	Partial Differential Inclusions	297
8.3.1	Decomposable Case	297
8.3.2	Existence of a Lipschitz Contingent Solution .	305
8.3.3	Comparison Results	307
8.4	The Variational Principle	308
8.4.1	Definition of the Functional	308
8.4.2	Convergence Properties of the Codifferentials .	311
8.5	Feedback Controls Regulating Smooth Evolutions . . .	313
9	Lyapunov Functions	315
9.1	Contingent Epiderivatives	319
9.1.1	Extended Functions and their Epigraphs	319
9.1.2	Contingent Epiderivatives	320
9.1.3	Epidifferential Calculus	325
9.2	Lyapunov Functions	327
9.2.1	The Characterization Theorem	327
9.2.2	Stability Theorems	329
9.2.3	W -Monotone Set-Valued Maps	330
9.2.4	Attractors	331
9.2.5	Universal Lyapunov Functions	332
9.3	Optimal Lyapunov Functions	333
9.3.1	Smallest Lyapunov Functions	333
9.3.2	Smallest Universal Lyapunov Functions	336
9.4	Other Monotonicity Properties	337
9.4.1	Monotone Solutions	337
9.4.2	LaSalle's Theorem	340
9.4.3	Example: Gradient Inclusions	341
9.4.4	Feedbacks Regulating Monotone Solutions . . .	342

9.5	Lyapunov Preorders	344
9.5.1	Monotone solutions with respect to a preorder	345
9.5.2	Comparison of solutions	346
9.6	Asymptotic Observability of Differential Inclusions . .	348
10	Miscellaneous Viability Issues	351
10.1	Variational Differential Inequalities	353
10.1.1	The Equivalence Theorem	354
10.1.2	Slow Solutions	357
10.1.3	Projected differential inclusions onto smooth subsets	359
10.2	Fuzzy Viability	361
10.2.1	Fuzzy Sets	361
10.2.2	Fuzzy Differential Inclusions	362
10.2.3	Fuzzy Viability Domains	364
10.3	Finite-Difference Schemes	367
10.3.1	Implicit Finite-Difference Scheme	367
10.3.2	Explicit Finite-Difference Scheme	368
10.3.3	Approximation of an Equilibrium	370
10.4	Newton's Method	371
11	Viability Tubes	377
11.1	Viability Tubes	381
11.2	Cauchy Problem for Viability Tubes	385
11.3	Asymptotic Target	386
11.4	Examples of Viability Tubes	387
11.5	An Abstract $\mathbf{K} - \mathbf{C}$ Problem	391
11.6	Invariant Tubes	393
11.7	Measurable Time Dependence	395
12	Functional Viability	401
12.1	Definitions and Examples	402
12.2	Functional Viability Theorem	405
12.3	History-dependent Viability Constraints	413
12.3.1	Viability constraints with delays	418
12.3.2	Volterra Viability constraints	419
12.4	Functional Viability Kernel	419
12.5	Functional Viability Tubes	421

13 Viability Theorems for Partial Differential Inclusions	425
13.1 Unbounded operators	427
13.2 Operational Differential Inclusions	430
13.3 Elliptic & Parabolic Inclusions	438
13.4 Distributed Control Systems	446
13.5 Lyapunov Functions of Parabolic Inclusions	448
14 Differential Games	451
14.1 Contingent Isaacs Equations	454
14.2 Playable Differential Games	462
14.3 Feedback Solutions	465
14.4 Discriminating and Leading Feedbacks	470
14.5 Closed Loop Decision Rules	474
Bibliographical Comments	485
Bibliography	497
Index	539
