Notations and conventions	xiii
INTRODUCTION: ESTIMATES IN THE UNIVARIATE CASE	1
1.1 Problems leading to extreme values of random variables	1
1.2 The mathematical model	3
1.3 Preliminaries for the independent and identically distributed case	7
1.4 Bounds on the distribution of extremes	15
1.5 Illustrations	25
1.6 Special properties of the exponential distribution in the light of extremes	30
1.7 Survey of the literature	42
1.8 Exercises	44
2. WEAK CONVERGENCE FOR INDEPENDENT AND IDENTICALLY DISTRIBUTED VARIABLES	49
2.1 Limit distributions for maxima and minima: sufficient conditions	51
2.2 Other possibilities for the normalizing constants in Theorems 2.1.1–2.1.6	57
2.3 The asymptotic distribution of the maximum and minimum for some special distributions	63
2.4 Necessary conditions for weak convergence	69
2.5 The proof of part (iii) of Theorem 2.4.3	79
2.6 Illustrations	88
2.7 Further results on domains of attraction	93

2.8	Weak convergence for the k th extremes	102
2.9	The range and midrange	105
2.10	Speed of convergence	111
2.11	Survey of the literature	117
2.12	Exercises	120
3.	WEAK CONVERGENCE OF EXTREMES IN THE GENERAL CASE	124
3.1	A new look at failure models	124
3.2	The special role of exchangeable variables	127
3.3	Preparations for limit theorems	134
3.4	A limit theorem for mixtures	137
3.5	A theoretical model	143
3.6	Segments of infinite sequences of exchangeable variables	148
3.7	Stationary sequences	156
3.8	Stationary Gaussian sequences	163
3.9	Limiting forms of the inequalities of Section 1.4	174
3.10	Minimum and maximum of independent variables	180
3.11	The asymptotic distribution of the k th extremes	184
3.12	Some applied models	188
3.12.1.	Exact models via characterization theorems	188
3.12.2.	Exact distributions via asymptotic theory (strength of materials)	189
3.12.3.	Strength of bundles of threads	191
3.12.4.	Approximation by i.i.d. variables	192
3.12.5	Time to first failure of equipments with a large number of components	195
3.13	Survey of the literature	197
3.14	Exercises	201
4.	DEGENERATE LIMIT LAWS; ALMOST SURE RESULTS	205
4.1	Degenerate limit laws	205
4.2	Borel-Cantelli lemmas	210
4.3	Almost sure asymptotic properties of extremes of i.i.d. variables	213
4.4	Lim sup and lim inf of normalized extremes	225
4.5	The role of extremes in the theory of sums of random variables	232

4.6	Survey of the literature	238
4.7	Exercises	240
5.	MULTIVARIATE EXTREME VALUE DISTRIBUTIONS	244
5.1	Basic properties of multivariate distributions	245
5.2	Weak convergence of extremes for i.i.d. random vectors: basic results	248
5.3	Further criteria for the i.i.d. case	254
5.4	On the properties of $H(\mathbf{x})$	258
5.5	Concomitants of order statistics	267
5.6	Survey of the literature	271
5.7	Exercises	274
6.	MISCELLANEOUS RESULTS	280
6.1	The maximum queue length in a stable queue	280
6.2	Extremes with random sample size	282
6.3	Record times	290
6.4	Records	299
6.5	Extremal processes	304
6.6	Survey of the literature	308
6.7	Exercises	311
APPENDICES		
I.	SOME BASIC FORMULAS FOR PROBABILITIES AND EXPECTATIONS	314
II.	THEOREMS FROM FUNCTIONAL ANALYSIS	322
III.	SLOWLY VARYING FUNCTIONS	329
