

CONTENTS

Chapter 1 Descriptive Statistics

1.1	Introduction	1
1.2	Origin and Use of Statistics	2
1.3	Misuse of Statistics	3
1.4	Describing a Distribution	4
1.5	Machine Computation	7
1.6	Coding	8
1.7	Group Data Method	9

Chapter 2 The Normal Distribution

2.1	Measurement Data	14
2.2	Normally Distributed Data	15
2.3	The Normal Curve	16
2.4	Normal Curve Areas	17
2.5	Departures from Normality	20

Chapter 3 Probability

3.1	Kinds of Probability	23
3.2	Independent Events.	24
3.3	Dependent Events	27
3.4	Applications	27
3.5	The Binomial Distribution.	29
3.6	The Factorial Method	31
3.7	Calculating Probability with a Curve.	31

Chapter 4 Inference

4.1	The Meaning of Inference	37
4.2	Sampling	38
4.3	Sample Size	40

4.4	Statistics and Parameters	40
4.5	The Sampling Distribution	41
4.6	The Standard Error	43
4.7	Estimation	45
4.8	An Example	47

Chapter 5 Hypothesis Testing

5.1	Decision Making	51
5.2	Decision Making—An Example	52
5.3	Hypothesis Testing	54
5.4	One- and Two-Tailed Tests	59
5.5	Levels of Significance	60
5.6	Two-Group Hypotheses	63

Chapter 6 Two-Group Comparisons—Student's *t*

6.1	Student's <i>t</i>	68
6.2	Two-Group Experimental Design.	73
6.3	Analysis of "Matched-Pair" Data	76
6.4	Analysis of Uncorrelated Group Design	79
6.5	Summary	82

Chapter 7 Enumeration Data—Chi-Square and Poisson Distributions

7.1	Enumeration Data	86
7.2	Chi Square with A Priori Hypothesis	86
7.3	Chi Square without A Priori Hypothesis.	92
7.4	Cautions in the Use of Chi Square	95
7.5	The Poisson Distribution	95
7.6	Variance of the Poisson Distribution	97
7.7	Determining the Probability of Isolated Events	97

7.8	The Confidence Interval of a Count	98
7.9	Determining Randomness	99

Chapter 8 Multiple Group Designs—Analysis of Variance

8.1	Analysis of Variance	104
8.2	Partitioning the Total Variability	105
8.3	Machine Computations	109
8.4	Assumptions Underlying the Analysis of Variance	109
8.5	The Logarithmic Transformation	111
8.6	The Arcsin Transformation	112
8.7	Single Classification Analysis of Variance	113
8.8	Randomized Block Design	116
8.9	Factorial Designs	119

Chapter 9 Nonparametric Tests

9.1	Distribution-Free Methods	127
9.2	The Sign Test for Matched Pairs	128
9.3	The Wilcoxon Test for Unpaired Data	130
9.4	Rank Correlation	133
9.5	Runs	134
9.6	Summary	136

Chapter 10 Correlation and Regression

10.1	Correlation	139
10.2	The Correlation Coefficient	140
10.3	Computing the Correlation Coefficient (r)	142
10.4	Testing Hypotheses About ρ	145
10.5	Estimating ρ	148
10.6	Regression	150

10.7	Variance of the Y-Values Around the Regression Line	155
10.8	Nonlinear Relationships	157
10.9	Summary	160

Chapter 11 Analysis of Covariance

11.1	Introduction	163
11.2	Rationale Underlying Analysis of Covariance	165
11.3	Single Classification Analysis of Covariance	169
11.4	Covariance Applied to a Factorial Design	173
11.5	Summary	181

Appendix A	Bibliography	184
-------------------	-------------------------------	-----

Appendix B	Solutions to Even-Numbered Problems	186
-------------------	--	-----

Appendix C	Tables
-------------------	---------------

I	Powers and Roots	209
II	Random Numbers	210
III	Critical Values of t	214
IV	Normal Curve Areas	215
V	Chi Square	216
VI	Values of the Exponential Function $e^{-\lambda}$	217
VII	Critical Values of F	218
VIII	Transformation of Percentage to Arcsin $\sqrt{\text{Percentage}}$	222
IX	Wilcoxon Distribution—Unpaired Data	225
X	Total Runs	226
XI	Values for the r to Z Transformation	227
XII	Values of Trigonometric Functions	228
Index	229
