Introduction: Interpolation	ix
A. Computation of square roots on a desk calculator	2
B. Computation of cube roots on a desk calculator	8
C. Common logarithms	17
D. Common logarithms of factorials	55
E. The exponential function e^{-x}	59
F. Functions of proportions	65
G. $f \ln f$ as a function of f	69
G*. $(f + \frac{1}{2}) \ln (f + \frac{1}{2})$ as a function of f	111
H. Orthogonal polynomials	114
I. Square roots of integers	117
J. $\sqrt{Y + \frac{1}{2}}$ as a function of an integer Y	123
K. The angular transformation	129
L. Proportions corresponding to angle θ	137
M. The z -transformation of correlation coefficient r	143
N. Correlation coefficient r as a function of transform z	148
O. Ten-thousand random digits	152
P. Areas of the normal curve	157
Q. Critical values of Student's t -distribution	159
R. Critical values of the chi-square distribution	163
S. Critical values of the F -distribution	168
T. Critical values of F_{\max}	198
U. Critical values of the Studentized range	200
V. Shortest unbiased confidence limits for the variance	205
W. Confidence limits for percentages	208
X. Relative expected frequencies for individual terms of the Poisson distribution	215
Y. Critical values for correlation coefficients	224
Z. Mean ranges of samples from a normal distribution	227
AA. Rankits (normal order statistics)	229
BB. Critical values of the number of runs	232
CC. Critical values of U , the Mann-Whitney statistic	240
DD. Critical values of the Wilcoxon rank sum	245
EE. Critical values of the Kolmogorov-Smirnov statistic	249
FF. Critical values of Olmstead and Tukey's test criterion	252
GG. Some mathematical constants	253
