I	Fuzzy Rule-Based Expert Systems	1
1	Introduction	7
2	Introduction to Fuzzy Sets	19
2.1	Fuzzy Sets	20
2.2	Basic Operations on Fuzzy Sets	26
2.3	Triangular Norms and Conorms	28
2.4	Aggregation Operations	35
2.5	The Extension Principle	37
2.6	Properties of Fuzzy Sets	39
2.7	A (Simple) Lookup Table	42
2.7.1	An Empty Lookup Table	43
2.7.2	The Generator of the Lookup Table	43
2.7.3	The Access Functions	43
3	Natural Language Computation	45
3.1	Overview	45
3.2	Approximate Reasoning	47
3.2.1	Adjectives	51
3.2.2	Adverbs	52
3.2.3	Connectives	55
3.2.4	Inference	55

3.3	Linguistic Approximation	59
3.3.1	The Best Fit Method	59
3.3.2	The Successive Approximation Method	63
3.3.3	The Piecewise Decomposition Method	64
3.4	Defuzzification	66
4	A Little but Extendible Language	69
4.1	The Boston Consulting Group (BCG) Approach	71
4.2	Model Prototyping	78
4.3	Gouldner's Patterns of Industrial Bureaucracy	80
4.4	Mulder's Theory of Power	87
5	Hybrid Reasoning	93
5.1	An Object-Oriented System in a Nutshell	94
5.1.1	Objects, Closures and Contexts	94
5.1.2	Inheritance and the Construction of Contexts	103
5.1.3	Dynamic Reinterpretation	110
5.2	The Credit-Worthiness of Consumers	114
6	A Fuzzy Backtrack Algorithm	125
6.1	Introduction	125
6.2	An Object-Oriented Framework for Time Series Analysis	129
6.2.1	Overview	129
6.2.2	The Model Specification Language	131
6.2.3	The Time Series Data Base	133
6.2.4	Tools for Model Identification	134
6.2.5	Transformations of Time Series	135
6.2.6	Estimation of ARMA-Model Parameters	137
6.2.7	Diagnostic Checking and Forecasting	137
6.2.8	Generating Synthetic Time Series	138

6.2.9	The User Interface <i>Time Series Analyst</i>	140
6.3	Fuzzy Time Series Analysis	141
6.3.1	The Fuzzy Rule Language	143
6.3.2	The Fuzzy Rule Compiler	144
6.3.3	The Fuzzy Rule Interpreter	146
6.3.4	The Backtrack Algorithm	147
6.3.5	The Interface Between Numerical Routines and the Rule Interpreter	149
6.4	Example	152

II Fuzzy Classifier Systems 155

7	Genetic Algorithms	161
7.1	The Natural Evolution Metaphor	161
7.2	A Simple Genetic Algorithm	164
7.3	Mathematical Foundations of Genetic Algorithms	175
7.3.1	The 2-Armed Bandit	180
7.3.2	The k-Armed Bandit	188
7.3.3	The Simple Genetic Algorithm Revisited	191
7.3.4	Comparing the Loss Functions	198
7.4	Variants of Genetic Algorithms	204
7.4.1	The Structures Undergoing Adaptation	205
7.4.2	The Initial Structures	208
7.4.3	Fitness	209
7.4.4	The Genetic Operators	211
7.4.5	The System State	220
7.4.6	Control Parameters of the Algorithm	221
7.4.7	Termination of a Genetic Algorithm	223
7.4.8	Choosing the Result of a Genetic Algorithm	223

7.5	Hybrid Genetic Algorithms	223
7.6	Parameterization Techniques	225
8	The Genetic Machinery over Context-Free Languages	233
8.1	The Genetic Programming Paradigm	233
8.2	The Components of the Machinery	237
8.3	A Simple Genetic Algorithm for Context-Free Languages	239
8.3.1	Problem Specification for Genetic Programming .	239
8.3.2	On Grammars, Words and Derivation Trees	242
8.3.3	The Main Routine	254
8.3.4	Generating Random Populations	255
8.3.5	Evaluating the Fitness Function	257
8.3.6	Calculating the Next Generation	259
8.4	The Probability of Generating Words	263
8.4.1	Improving the Initializing Procedure	270
8.4.2	Improving Crossover and Mutation	272
8.4.3	Experimental Results	274
8.5	The (Functional) Abstraction Operator	275
8.5.1	Abstraction	275
8.5.2	The “Genetic” Operator Abstraction	280
8.5.3	Abstraction and Intermediate Goals	281
8.5.4	The Effect of Abstraction	282
8.5.5	Breeding Programs with Subprograms	284
8.6	MEMO Functions	286
9	Fuzzy Classifier Systems	287
9.1	What is a Fuzzy Classifier System?	287
9.2	The Components of a (Holland) Classifier System	289
9.2.1	The Task Environment	290
9.2.2	The Production System	293

9.2.3	The Bucket Brigade Algorithm	300
9.2.4	The Genetic Algorithm	306
9.3	Fuzzy Classifier Systems (CS)	309
9.3.1	Fuzzy GAs and Fuzzy CSs of the Pittsburgh Type	309
9.3.2	Fuzzy CSs of the Michigan Type	313
10	The Monte Carlo Selection Rule	315
10.1	Motivation	315
10.2	The Basic Idea	316
10.3	The Monte Carlo Selection Rule	318
10.4	Global Convergence	318
10.5	Summary	323
11	The Search Space Size of Fuzzy Classifier Systems	325
11.1	Counting and Formal Languages	327
11.2	An Outline of the Proof Technique	333
11.3	A Fuzzy Control Rule Language	337
11.4	The BCG's Rule Language	345
11.5	Related Work	361
11.6	Summary	363
	Bibliography	365
	List of Symbols	389
	Index	395
