CONTENTS

Preface iii

Notation xiii

Chapter 1: Overview and Purpose 1
- 1-0 Beginnings 1
- 1-1 History and Motivations 1
- 1-2 Purposes 7
- 1-3 Classic Problems 12
- 1-4 Landmarks in Nonlinear Estimation Methods 15
- 1-5 Statistical Approaches 19
- 1-6 Software Approaches 23
- 1-7 Characterization of Problems 25
- 1-8 Outline of Intentions 30

Chapter 2: Examples of Nonlinear Parameter Estimation Problems 33
- 2-0 Examples -- An Overview 33
- 2-1 Growth and Decay Models 34
- 2-2 Equilibrium Models in Sciences and Engineering 42
- 2-3 Maximum Likelihood Estimation 44
- 2-4 Robust Estimation Techniques 45

2-5 Constraints Introducing Nonlinearity 46
2-6 Loss Functions Which Are Sums of Squares 48

Chapter 3: Exploring the Problem 53
3-0 Overview -- Properties of Problems 53
3-1 The Function and Its Scaling 54
3-2 Including Constraints 58
3-3 Scaling of Parameters and Data 62
3-4 Nonlinear Transformations 67
3-5 A Simple Example 68
3-6 A Framework for Parameter Estimation 72
3-7 Testing Derivative Calculations 73
3-8 Testing Residual and Jacobian Calculations 82
3-9 Initial Parameter Estimates 88

Chapter 4: Direct Search Methods 91
4-0 Overview -- Direct Search Methods 91
4-1 Motivations 91
4-2 Background 94
4-3 Implementation Details 95

Chapter 5: The Hooke and Jeeves Method 101
5-0 Overview -- Hooke and Jeeves 101
5-1 The Hooke and Jeeves Source-code 104
5-2 Use of the Hooke and Jeeves Method 108

Chapter 6: The Nelder - Mead Polytope Method 113
6-0 Overview -- Nelder - Mead 113
6-1 Nelder - Mead Source-code 123
6-2 Use of the Nelder - Mead Method 130

Chapter 7: Minimization Using the Gradient 133
7-0 Overview -- Gradient Minimization 133
7-1 Motivation and Characterization 134
7-2 Perspective 139

7-3 Masks and Bounds 142
7-4 A General Parameter Step Algorithm 144
7-5 Finite Difference Approximation of the Gradient 145

Chapter 8: The Conjugate Gradients Method 149
8-0 Overview -- Conjugate Gradients 149
8-1 Conjugate Gradient Source-code 151
8-2 Use of the Conjugate Gradients Method 158

Chapter 9: The Truncated Newton Method 163
9-0 Overview -- Truncated Newton 163
9-1 Truncated Newton Source-code 167
9-2 Use of the Truncated Newton Method 174

Chapter 10: The Variable Metric Method 179
10-0 Overview -- Variable Metric 179
10-1 Variable Metric Source-code 182
10-2 Use of the Variable Metric Method 189

Chapter 11: Methods for Sums of Squared Functions 193
11-0 Overview -- Sums of Squared Functions 193
11-1 Popularity of Nonlinear Least Squares 195
11-2 Conversion of Problems to Sums of Squares 196
11-3 Diverse Approaches 199
11-4 The Levenberg-Marquardt-Nash Approach 203
11-5 Marquardt Source-code 207
11-6 Use of the Marquardt Method 215
11-7 Other Approaches 218
11-8 Numerical Approximation of the Jacobian 221

Chapter 12: Choosing an Approach and Method 225
12-0 The Choices Facing the User 225
12-1 Indicators for a Given Method 228
12-2 General Performance of Methods 231

Chapter 13: Measures and Consequences of Nonlinearity 245
13-0 Overview -- Consequences of Nonlinearity 245
13-1 Why Nonlinear Estimation Is Difficult 247
13-2 Measures of Nonlinearity 251
13-3 Convergence Tests and Restarts 253
13-4 Estimates of Parameter Dispersion 258
13-5 A General Post-Solution Analysis 261
13-6 POSTGEN - General Post-Solution Analysis 263
13-7 POSTMRT - a Jacobian Dispersion Estimate 268
13-8 POSTVM - a Hessian Dispersion Estimate 274
13-9 RESSAVE - Display of Residuals 279

Chapter 14: Difficult Problems 283
14-0 Some Difficult Problems 283
14-1 Mixtures of Exponentials 283
14-2 Constrained Problems with Awkward Feasible Regions 291
14-3 Multiple Minima 293
14-4 Global Minima 299
14-5 The Variable Projection Method 302

Chapter 15: Implementation Details 305
15-0 Implementation Details 305
15-1 Block Structure 306
15-2 Main Driver Code 312
15-3 The Problem File 319
15-4 File Input / Output 325
15-5 Consolidation of Program Segments 327
15-6 Testing Functions and Derivatives 333
15-7 Plotting 335

Chapter 16: Examples from Chemical Kinetics 341
16-0 Chemical Kinetic Parameter Estimation Problems 341

16-1 The Michaelis-Menten Curve 341
16-2 More Complicated Kinetic Models 345
16-3 A Simple Chemical Kinetics Example 352
16-4 The BMDP and Related Examples 355
16-5 Concurrent Chemical Reactions 358

Chapter 17: Applications in Economic Modeling and Forecasting 365
17-0 Economic Modeling and Forecasting 365
17-1 Estimation of an Econometric Model 365
17-2 Simulation of Econometric Models 373
17-3 Production Functions 375
17-4 Forecasting Problems 380

Chapter 18: Test Problems and Other Examples 387
18-0 Test Problems and Other Examples 387
18-1 Simple Tests 387
18-2 Problems from S. G. Nash 392
18-3 WOODR.RES and WOOD.FN - A Traditional Test 393
18-4 NASHEASY.FN - A Large but "Easy" Problem 395
18-5 NASHHARD.FN - A Large but Awkward Problem 395
18-6 LONION.RES - A Yield-Density Model Problem 396
18-7 RS.FN - General Inequality Constraints 399
18-8 The Moré, Garbow and Hillstrom Test Problems 402

Appendix A: Program Code for Test and Example Problems 405
ABS.FN 405
BAGLIVO.RES 406
BT.RES 407
CAL4.FN 407
GENROSE.FN 408
GENROSEJ.RES 410
KMENTALP.RES 411
LINTEST.RES 413
LONION.RES 414

NASHEASY.FN 417
NASHHARD.FN 418
QUADSN.FN 419
RS.FN 420
WOOD.FN 421
WOODR.RES 422

Appendix B: Data Dictionary 425

Appendix C: Line Number Conventions 435

Appendix D: Exceptions from Minimal BASIC in Code Presented 437

Appendix E: Computing Environment 441
