Preface	v
1. Introduction	1
1.1 What is numerical analysis?	1
1.2 Numerical algorithms	3
1.3 Properly posed and well-conditioned problems	5
Problems	9
2. Basic Analysis	11
2.1 Functions	11
2.2 Limits and derivatives	16
2.3 Sequences and series	24
2.4 Integration	28
2.5 Logarithmic and exponential functions	30
Problems	31
3. Taylor's Polynomial and Series	36
3.1 Function approximation	36
3.2 Taylor's theorem	37
3.3 Convergence of Taylor series	40
3.4 Taylor series in two variables	43
3.5 Power series	44
Problems	45
4. The Interpolating Polynomial	48
4.1 Linear interpolation	48
4.2 Polynomial interpolation	50
4.3 Accuracy of interpolation	52
4.4 Neville's algorithm	54
4.5 Inverse interpolation	57

4.6	Divided differences	59
4.7	Equally spaced points	62
4.8	Derivatives and differences	68
4.9	Difference tables	70
4.10	Choice of interpolating points	73
	Problems	77
5.	“Best” Approximation	82
5.1	Introduction	82
5.2	Least squares approximation	84
5.3	Smoothing formulae	89
5.4	Orthogonal functions	90
5.5	Orthogonal polynomials	95
5.6	Minimax approximation	102
5.7	Chebyshev series	108
5.8	Economization of power series	111
5.9	Convergence of minimax polynomials	112
5.10	Further types of approximation	113
	Problems	114
6.	Numerical Differentiation and Integration	120
6.1	Numerical differentiation	120
6.2	Effect of errors	125
6.3	Numerical integration	129
6.4	Romberg integration	136
6.5	Gaussian integration	138
6.6	Indefinite integrals	144
6.7	Improper integrals	145
6.8	Multiple integrals	147
	Problems	149
7.	Solution of Algebraic Equations of One Variable	154
7.1	Introduction	154
7.2	The bisection method	155
7.3	Interpolation methods	157
7.4	One-point iterative methods	161
7.5	Faster convergence	164
7.6	Higher order processes	167
7.7	The contraction mapping theorem	172
	Problems	174

8. Linear Equations	179
8.1 Introduction	179
8.2 Matrices	179
8.3 Linear equations	186
8.4 Vector interpretation of linear equations	194
8.5 Pivoting	196
8.6 Analysis of elimination method	198
8.7 Matrix factorization	202
8.8 Compact elimination methods	206
8.9 Partial pivoting in compact elimination methods	209
8.10 Symmetric matrices	211
8.11 Matrix inversion	216
8.12 Tridiagonal matrices	219
Problems	221
9. Matrix Norms and Applications	229
9.1 Vector norms	229
9.2 Matrix norms	231
9.3 Rounding errors in solving linear equations	237
9.4 Conditioning	243
9.5 Iterative correction from residual vectors	248
9.6 Iterative correction for an inverse	253
9.7 Iterative methods	255
Problems	259
10. Systems of Non-Linear Equations	265
10.1 Contraction mapping theorem	265
10.2 Newton's method	270
Problems	273
11. Ordinary Differential Equations	276
11.1 Introduction	276
11.2 Difference equations	281
11.3 One-step methods	288
11.4 Truncation errors of one-step methods	292
11.5 Convergence of one-step methods	293
11.6 Effect of rounding errors on one-step methods	299
11.7 Methods based on numerical integration; explicit methods	300

11.8	Methods based on numerical integration; implicit methods	304
11.9	Iterating with the corrector	310
11.10	A method of estimating truncation errors	311
11.11	Numerical stability	314
11.12	Systems and higher order equations	322
11.13	Notes comparing step-by-step methods	327
	Problems	329
12.	Boundary Value and Other Methods for Ordinary Differential Equations	336
12.1	Shooting method for boundary value problems	336
12.2	Boundary value method	337
12.3	Extrapolation to the limit	345
12.4	Deferred correction	346
12.5	Chebyshev series method	349
	Problems	353
Appendix:	Computer Arithmetic	358
A.1	Binary numbers	358
A.2	Integers and fixed point fractions	359
A.3	Floating point arithmetic	360
	Problems	362
References		364
Solutions to Selected Problems		365
Index		377
