

Contents

Notations and Abbreviations	7
Preface	9
Chapter 1. Manipulation of Vectors and Matrices	13
Chapter 2. Norms of Vectors and Matrices	16
Chapter 3. Induced Norms	19
Chapter 4. The Inversion Problem I: Theoretical Arithmetic	29
Chapter 5. The Inversion Problem II: Practical Computation	44
Chapter 6. The Characteristic Value Problem — Generalities	53
Chapter 7. The Power Method, Deflation, Inverse Iteration	65
Chapter 8. Characteristic Values	71
Chapter 9. Iterative Methods for the Solution of Systems $\mathbf{A}x = \mathbf{b}$	83
Chapter 10. Application: Solution of a Boundary Value Problem	99
Chapter 11. Application: Least Squares Curve Fitting	105
Chapter 12. Singular Value Decomposition and Pseudo-Inverses	110
Solutions to Selected Problems	117
Bibliographical Remarks	212
Index	214
