

CONTENTS

Mieczyslaw ALTMAN	A Strategy Theory of Solving Equations ...	1
P.M. ANSELONE and J.W. LEE	A Unified Approach to the Approximate Solution of Linear Integral Equations	41
David L. BARROW	The Topological Degree Applied to Some Problems in Approximation Theory	70
E.K. BLUM	Numerical Solution of Eigentuple-eigen- vector Problems in Hilbert Space	80
John DE PILLIS	Improved Convergence for Linear Systems Using Three-Part Splittings	97
William KOLATA and John OSBORN	Nonselfadjoint Spectral Approximation and the Finite Element Method	115
Luis KRAMARZ	Hermite Methods for the Numerical Solution of Ordinary Initial Value Problems	134
John LOCKER and P.M. PRENTER	On Least Squares Methods for Linear Two- Point Boundary Value Problems	149
W. Robert MANN	Averaging to Improve Convergence of Iterative Processes	169
M.Z. NASHED	On the Perturbation Theory for Generalized Inverse Operators in Banach Spaces	180
J.W. NEUBERGER	Boundary Value Problems for Systems of Nonlinear Partial Differential Equations .	196
W.V. PETRYSHYN	On the Solvability of Nonlinear Equations Involving Abstract and Differential Operators	209
L.B. RALL	Perturbation Methods for the Solution of Linear Problems	248
G.W. REDDIEN	Difference Approximations to Boundary Value Problems with Deviating Arguments ..	282
Ridgway SCOTT	Applications of Banach Space Interpolation to Finite Element Theory	298
Gilbert STRANG	A Minimax Problem in Plasticity Theory ...	319
