## *Preface*

## ***PART I REAL VARIABLE THEORY***

### ***Chapter 1 The Important Limit Processes 3***

- 1.1. Functions and Functionals 3
- 1.2. Limits, Continuity, and Uniform Continuity 4
- 1.3. Differentiation 8
- 1.4. Integration 9
- 1.5. Asymptotic Notation and the “Big Oh” 11
- 1.6. Numerical Integration 12
- 1.7. Differentiation of Integrals Containing a Parameter;  
Leibnitz’s Rule 17  
Exercises 19

### ***Chapter 2 Infinite Series 23***

- 2.1. Sequences and Series; Fundamentals and Tests for  
Convergence 23
- 2.2. Series with Terms of Mixed Sign 29
- 2.3. Series with Terms That Are Functions; Power Series 31
- 2.4. Taylor Series 34
- 2.5. That’s All Very Nice, But How Do We Sum the Series?  
Acceleration Techniques 38
- \*2.6. Asymptotic Expansions 43  
Exercises 46

**Chapter 3** *Singular Integrals* 51

- 3.1. Choice of Summability Criteria;  
Convergence and Cauchy Principal Value 51
- 3.2. Tests for Convergence 54
- 3.3. The Gamma Function 56
- 3.4. Evaluation of Singular Integrals 59  
Exercises 61

**Chapter 4** *Interchange of Limit Processes and the Delta Function* 66

- 4.1. Theorems on Limit Interchange 67
- 4.2. The Delta Function and Generalized Functions 68  
Exercises 73

**Chapter 5** *Fourier Series and the Fourier Integral* 77

- 5.1. The Fourier Series of  $f(x)$  78
- 5.2. Pointwise Convergence of the Series 80
- 5.3. Termwise Integration and Differentiation of Fourier Series 85
- 5.4. Variations: Periods Other than  $2\pi$ , and Finite Interval 86
- 5.5. Infinite Period; the Fourier Integral 88  
Exercises 92

**Chapter 6** *Fourier and Laplace Transforms* 98

- 6.1. The Fourier Transform 99
- 6.2. The Laplace Transform 103
- 6.3. Other Transforms 112  
Exercises 112

**Chapter 7** *Functions of Several Variables* 120

- 7.1. Chain Differentiation 120
- 7.2. Taylor Series in Two or More Variables 125  
Exercises 127

**Chapter 8** *Vectors, Surfaces, and Volumes* 132

- 8.1. Vectors and Elementary Operations 132
- 8.2. Coordinate Systems, Base Vectors, and Components 136
- 8.3. Angular Velocity of a Rigid Body 139
- 8.4. Curvilinear Coordinate Representation of Surfaces 141
- 8.5. Curvilinear Coordinate Representation of Volumes 144  
Exercises 145

**Chapter 9** *Vector Field Theory* 150

- 9.1. Line Integrals 150
- 9.2. The Curves, Surfaces, and Regions Under Consideration 152
- 9.3. Divergence, Gradient, and Curl 153
- 9.4. The Divergence Theorem 160
- 9.5. Stokes' Theorem 166
- 9.6. Irrotational and Solenoidal Fields 170
- 9.7. Noncartesian Systems 175
- 9.8. Fluid Mechanics; Irrotational Flow 177
- 9.9. The Gravitational Potential 182
- Exercises 187

**Chapter 10** *The Calculus of Variations* 196

- 10.1. Functions of One or More Variables 197
- 10.2. Constraints; Lagrange Multipliers 199
- 10.3. Functionals and the Calculus of Variations 202
- 10.4. Two or More Dependent Variables; Hamilton's Principle 209
- 10.5. Two or More Independent Variables;  
Vibrating Strings and Membranes 211
- 10.6. The Ritz Method 216
- 10.7. Optimal Control 218
- Exercises 220

*Additional References for Part I* 227

**PART II** *COMPLEX VARIABLES*

**Chapter 11** *Complex Numbers* 231

- 11.1. The Algebra of Complex Numbers 231
- 11.2. The Complex Plane 232
- Exercises 234

**Chapter 12** *Functions of a Complex Variable* 235

- 12.1. Basic Notions 235
- 12.2. Differentiation and the Cauchy–Riemann Conditions  
for Analyticity 237
- 12.3. Harmonic Functions 239
- 12.4. Some Elementary Functions and Their Singularities 240
- 12.5. Multivaluedness and the Need for Branch Cuts 243
- Exercises 248

**Chapter 13** *Integration, Cauchy's Theorem, and the Cauchy Integral Formula* 252

- 13.1. Integration in the Complex Plane 252
- 13.2. Bounds on Contour Integrals 255
- 13.3. Cauchy's Theorem 255
- 13.4. An Important Little Integral 256
- 13.5. The Cauchy Integral Formula 257
- Exercises 259

**Chapter 14** *Taylor and Laurent Series* 261

- 14.1. Complex Series 261
- 14.2. Taylor Series 263
- 14.3. Laurent Series 265
- 14.4. Classification of Isolated Singularities 269
- Exercises 272

**Chapter 15** *The Residue Theorem and Contour Integration* 276

- 15.1. The Residue Theorem 276
- 15.2. The Calculation of Residues 277
- 15.3. Applications 279
- 15.4. Cauchy Principal Value 285
- Exercises 286

**Chapter 16** *Conformal Mapping* 291

- 16.1. The Fundamental Problem 291
- 16.2. Conformality 292
- 16.3. The Bilinear Transformation and Applications 294
- Exercises 298

*Additional References for Part II* 304

**PART III** *LINEAR ANALYSIS*

**Chapter 17** *Linear Spaces* 309

- 17.1. Introduction; Extension to  $n$  tuples 309
- 17.2. The Definition of an Abstract Vector Space 311
  - Introducing a Norm and Inner Product 312
- 17.3. Linear Dependence, Dimension, and Bases 315
- 17.4. Function Space 318
- \*17.5. Continuity of the Inner Product 324
- Exercises 324

**Chapter 18** *Linear Operators* 328

- 18.1. Some Definitions 328
- 18.2. Operator Algebra 331
- 18.3. Further Discussion of Matrices 334
- 18.4. The Adjoint Operator 335  
Exercises 337

**Chapter 19** *The Linear Equation  $Lx = c$*  340

- 19.1. Introduction 340
- 19.2. Existence and Uniqueness 342
- 19.3. The Inverse Operator  $L^{-1}$  344  
The Inverse of a Matrix 345  
\*Inverse of  $I + M$  where  $M$  is Small; the Neumann Series 349  
Exercises 354

**Chapter 20** *The Eigenvalue Problem  $Lx = \lambda x$*  359

- 20.1. Statement of the Eigenvalue Problem 359
- 20.2. Some Eigenhunts 360
- 20.3. The Sturm–Liouville Theory 363
- 20.4. Additional Discussion for the Matrix Case 367  
The Inertia Tensor 372
- 20.5. The Inhomogeneous Problem  $Lx = c$  376
- 20.6. Eigen Bounds and Estimates 377  
Exercises 380

*Additional References for Part III* 389

**PART IV** *ORDINARY DIFFERENTIAL EQUATIONS*

**Chapter 21** *First-Order Equations* 393

- 21.1. Standard Methods of Solution 393  
Variables Separable 394  
Homogeneous of Degree Zero 394  
Exact Differentials and Integrating Factors 395
- 21.2. The Questions of Existence and Uniqueness 398  
Exercises 403

**Chapter 22** *Higher-Order Systems* 408

- \*22.1. Nonlinear Case; Existence and Uniqueness 408
- 22.2. The Linear Equation; Some Theory 411
- 22.3. The Linear Equation; Some Methods of Solution 415
- 22.4. Series Solution; Bessel and Legendre Functions 423
- 22.5. The Method of Green's Functions 434

- 22.6. Some Nonlinear Problems and Techniques 438
  - Nonlinear Algebraic Equations 440
  - Application to Nonlinear Differential Equations 443
  - Exercises 444

**Chapter 23** *Qualitative Methods; The Phase Plane* 454

- 23.1. The Phase Plane and Some Simple Examples 455
- 23.2. Singular Points 457
- 23.3. Additional Examples 461
  - Exercises 467

**Chapter 24** *Quantitative Methods* 472

- 24.1. The Methods of Taylor and Euler 472
- 24.2. Improvements: Midpoint Rule and Runge–Kutta 476
- 24.3. Stability 479
- 24.4. Application to Higher-Order Systems 483
- 24.5. Boundary Value Problems 485
  - \*Invariant Imbedding 487
- 24.6. The Method of Weighted Residuals 488
- 24.7. The Finite-Element Method 491
  - Exercises 494

**Chapter 25** *Perturbation Techniques* 500

- 25.1. Introduction; the Regular Case 501
- 25.2. Singular Perturbations: Straining Methods 502
- 25.3. Singular Perturbations: Boundary Layer Methods 508
  - Exercises 514

*Additional References for Part IV* 519

**PART V** *PARTIAL DIFFERENTIAL EQUATIONS*

**Chapter 26** *Separation of Variables and Transform Methods* 523

- 26.1. Introduction 523
- 26.2. Some Background; the Sturm–Liouville Theory 525
- 26.3. The Diffusion Equation 528
- 26.4. The Wave Equation 540
- 26.5. The Laplace Equation 547
  - Exercises 553

**Chapter 27** *Classification and the Method of Characteristics* 564

- 27.1. Characteristics and Classification 564
- 27.2. The Hyperbolic Case 566
- 27.3. Reduction of  $A\phi_{xx} + 2B\phi_{xy} + C\phi_{yy} = F$  to Normal Form 573
- 27.4. Comparison of Hyperbolic, Elliptic, and Parabolic Systems; Summary 574  
Exercises 576

**Chapter 28** *Green's Functions and Perturbation Techniques* 579

- 28.1. The Green's Function Approach 579
- 28.2. Perturbation Methods 585  
Exercises 589

**Chapter 29** *Finite-Difference Methods* 596

- 29.1. The Heat Equation; An Explicit Method and Its Convergence and Stability 596
- 29.2. The Heat Equation; Implicit Methods 604
- 29.3. Hyperbolic and Elliptic Problems 607  
Exercises 608

*Additional References for Part V* 612

*Survey-Type References* 614

*Answers to Selected Exercises* 616

*Index* 625

*Fourier and Laplace Transform Tables, Inside Front Cover*

*Some Frequently Needed Formulas, Inside Back Cover*
