<b>Preface</b> . . . . .	ix
<b>1. Introduction</b> . . . . .	1
1.1 Approximation in a normed linear space . . . . .	1
1.2 Existence of best approximations . . . . .	5
1.3 Uniqueness of best approximations. . . . .	9
1.4 Some additional results concerning convexity . . . . .	12
1.5 Characterization of best approximations . . . . .	14
1.6 Some alternatives to best approximation . . . . .	18
<b>2. The Chebyshev solution of an overdetermined system of linear equations</b> . . . . .	25
2.1 Introduction. . . . .	25
2.2 Characterization of solutions . . . . .	27
2.3 Uniqueness of the solution. . . . .	31
2.4 Solutions to subproblems in $R^{n+1}$ . . . . .	34
2.5 Ascent methods . . . . .	37
2.6 Descent methods . . . . .	43
2.7 Some other approaches . . . . .	47
<b>3. Linear Chebyshev approximation of continuous functions</b> . . . . .	49
3.1 Introduction. . . . .	49
3.2 Characterization of solutions . . . . .	50
3.3 Uniqueness of the solution. . . . .	63
3.4 Discretization . . . . .	67
3.5 The algorithms of Remes . . . . .	69
3.6 Some other approaches . . . . .	80
3.7 Muntz–Jackson theorems . . . . .	81
<b>4. The <math>L_p</math> solution of an overdetermined system of linear equations</b> . . . . .	85
4.1 Introduction. . . . .	85
4.2 The case $p = 2$ . . . . .	86
4.3 The cases $p \neq 2$ . . . . .	91
<b>5. Linear <math>L_p</math> approximation of continuous functions.</b> . . . . .	97
5.1 Introduction. . . . .	97

5.2	The case $p = 2$ . . . . .	99
5.3	Orthogonal functions . . . . .	101
5.4	Orthogonal polynomials . . . . .	102
5.5	The cases $p > 2$ . . . . .	115
<b>6.</b>	<b>The <math>L_1</math> solution of an overdetermined system of linear equations</b>	<b>117</b>
6.1	Introduction. . . . .	117
6.2	Characterization of solutions . . . . .	118
6.3	Linear programming methods . . . . .	122
6.4	Direct descent methods . . . . .	127
<b>7.</b>	<b>Linear <math>L_1</math> approximation of continuous functions . . . . .</b>	<b>131</b>
7.1	Introduction. . . . .	131
7.2	Characterization of solutions . . . . .	131
7.3	Uniqueness of the solution. . . . .	135
7.4	The construction of best approximations. . . . .	137
7.5	Discretization . . . . .	141
<b>8.</b>	<b>Piecewise polynomial approximating functions . . . . .</b>	<b>145</b>
8.1	Introduction. . . . .	145
8.2	The Hermite space $H^{(m)}(\Delta)$ . . . . .	147
8.3	Error bounds for $H^{(2)}(\Delta)$ interpolants. . . . .	152
8.4	The spline space $S^{(m)}(\Delta)$ . . . . .	157
8.5	Error bounds for $S^{(3)}(\Delta)$ interpolants . . . . .	165
8.6	Methods for approximating by spline functions . . . . .	167
<b>9.</b>	<b>Chebyshev approximation by nonlinear families . . . . .</b>	<b>174</b>
9.1	Introduction. . . . .	174
9.2	Nonlinear approximation on an interval . . . . .	175
9.3	Rational approximation on an interval . . . . .	181
9.4	Rational approximation on a discrete set. . . . .	193
9.5	The differential correction algorithm . . . . .	195
9.6	The second algorithm of Remes . . . . .	199
<b>10.</b>	<b>Nonlinear discrete approximation . . . . .</b>	<b>204</b>
10.1	Introduction . . . . .	204
10.2	Methods of Gauss–Newton type . . . . .	207
10.3	The $L_2$ problem . . . . .	212
10.4	The $L_\infty$ problem. . . . .	214
10.5	The $L_1$ problem . . . . .	215
	<b>References . . . . .</b>	<b>217</b>
	<b>Index . . . . .</b>	<b>227</b>
