Preface

xi

1 *FINITE DIFFERENCES*

- | | |
|---|----|
| 1. Calculus to Algebra to Arithmetic | 1 |
| 2. Differentials and Finite Difference Approximations | 3 |
| 3. Finite Difference Schemes | 5 |
| 4. Accuracy Analysis | 7 |
| 5. Higher-Order Schemes | 9 |
| Exercises | 11 |
| Suggested Further Reading | 11 |

2 *TWO-POINT BOUNDARY VALUE PROBLEMS*

- | | |
|--|----|
| 1. Finite Difference Approximation of the Loaded String Equation | 12 |
| 2. Incorporation of Boundary Conditions | 14 |
| 3. Consistency and Stability: Convergence | 16 |
| 4. Higher-Order Consistency | 18 |
| 5. Finite Difference Approximation of the Beam Equation | 19 |
| 6. Splitting of the Beam Equation into Two String Equations | 21 |
| 7. Nonlinear Two-Point Boundary Value Problems | 23 |
| Exercises | 24 |
| Suggested Further Reading | 28 |

3 *VARIATIONAL FORMULATIONS*

- | | |
|--|----|
| 1. Energy Error | 29 |
| 2. Principle of Minimum Potential Energy | 33 |

vii

3. More General Boundary Conditions	36
4. Complementary Variational Principles	38
5. Euler–Lagrange Equations	40
6. Total Potential Energy of the Thin Elastic Beam	42
7. Indefinite Variational Principles	43
8. A Bound Theorem	45
Exercises	45
Suggested Further Reading	47

4 *FINITE ELEMENTS*

1. The Idea of Ritz	48
2. Finite Element Basis Functions	51
3. Finite Element Matrices	53
4. Assembly of Global Matrices	55
5. Essential and Natural Boundary Conditions	59
6. Higher-Order Finite Elements	61
7. Beam Element	67
8. Complex Structures	67
Exercises	69
Suggested Further Reading	70

5 *DISCRETIZATION ACCURACY*

1. Energy Theorems	71
2. Energy Rates of Convergence	74
3. Sharpness of the Energy Error Estimate	79
4. L_2 Error Estimate	81
5. L_∞ Error Estimate	83
6. Richardson's Extrapolation to the Limit	84
7. Numerical Integration	85
Exercises	86
Suggested Further Reading	88

6 *EIGENPROBLEMS*

1. Stability of Columns	89
2. Vibration of Elastic Systems	93
3. Finite Difference Approximation	95
4. Rayleigh's Quotient	98
5. Finite Element Approximation	101
6. The Minmax Principle	103
7. Discretization Accuracy of Eigenvalues	105
8. Discretization Accuracy of Eigenfunctions	111
9. Change of Basis: Condensation	112
10. Numerical Integration: Lumping	115

11. Nonlinear Eigenproblems	118
Exercises	121
Suggested Further Reading	124

7 ALGEBRAIC PROPERTIES OF THE GLOBAL MATRICES

1. Eigenvalue Range in $Ky = \lambda My$	125
2. Spectral Norms of K and M	128
3. Spectral Condition Numbers	131
4. Irregular Meshes	135
5. The Influence (Green's) Function	138
6. Maximum Norms and Condition Numbers	141
7. Scaling	143
8. Positive Flexibility Matrices	150
9. Computational Errors	152
10. Detection of Computational Errors	154
Exercises	155
Suggested Further Reading	157

8 EQUATION OF HEAT TRANSFER

1. Nonstationary Heat Transfer in a Rod	158
2. Finite Difference Approximation	160
3. Modal Analysis	161
4. Finite Elements	163
5. Essential Boundary Conditions	163
6. Euler's Stepwise Integration in Time	165
7. Explicit Finite Element Schemes	167
8. Convergence of Euler's Method	168
9. Stability	169
10. Stable Time Step Size Estimate	171
11. Numerical Example	173
12. Implicit Unconditionally Stable Schemes	175
13. Higher-Order Single Step Implicit Schemes	177
14. Superstable Schemes	179
15. Multistep Schemes	182
16. Predictor–Corrector Methods	187
17. Nonlinear Heat Condition and the Runge–Kutta Method	189
Exercises	190
Suggested Further Reading	192

9 EQUATION OF MOTION

1. Spring–Mass System	193
2. Single Step Explicit Scheme	194
3. Conditionally Stable Schemes	196

4. Lattice of Springs and Masses	200
5. Modal Decomposition	201
6. Stability Conditions for $Ky + M\ddot{y} = 0$	203
7. Nonlinear Equation of Motion	206
8. Single Step Unconditionally Stable Implicit Scheme	208
9. Unconditionally Stable Semiexplicit Schemes	211
10. Multistep Methods	214
11. Runge–Kutta–Nyström Method	218
12. Shooting in Boundary Value Problems	218
Exercises	220
Suggested Further Reading	228

10 WAVE PROPAGATION

1. Standing and Traveling Waves in a String	229
2. Discretization in Space	232
3. Spurious Dispersion	234
4. Effects of (Numerical) Viscosity	237
5. Higher-Order Elements	238
6. Spurious Reflection	243
7. Flexural Waves in a Beam	245
8. Stiff String	249
Exercises	249
Suggested Further Reading	251
