Preface to the English edition ix

Introduction 1

Chapter 1. Regularization methods 7

1. Statement of the problem. The smoothing functional 7

2. Choice of the regularization parameter 8

3. Equivalence of the generalized discrepancy principle and the generalized discrepancy method 16

4. The generalized discrepancy and its properties 19

5. Finite-dimensional approximation of ill-posed problems 28

6. Numerical methods for solving certain problems of linear algebra 32

7. Equations of convolution type 34

8. Nonlinear ill-posed problems 45

9. Incompatible ill-posed problems 52

Chapter 2. Numerical methods for the approximate solution of ill-posed problems on compact sets 65

1. Approximate solution of ill-posed problems on compact sets 66

2. Some theorems regarding uniform approximation to the exact solution of ill-posed problems 67

3. Some theorems about convex polyhedra in R^n 70

4. The solution of ill-posed problems on sets of convex functions 75

5. Uniform convergence of approximate solutions of bounded variation 76

Chapter 3. Algorithms for the approximate solution of ill-posed problems on special sets 81

1. Application of the conditional gradient method for solving problems on special sets 81

2. Application of the method of projection of conjugate gradients to the solution of ill-posed problems on sets of special structure 88

3. Application of the method of projection of conjugate gradients, with projection into the set of vectors with nonnegative components, to the solution of ill-posed problems on sets of special structure 92

Chapter 4. Algorithms and programs for solving linear ill-posed problems 97

0.1. Some general programs 98

1. Description of the program for solving ill-posed problems by the regularization method 100

1.1. Description of the program PTIMR 102

1.2. Description of the program PTIZR 110

2. Description of the program for solving integral equations with a priori constraints by the regularization method 116

2.1. Description of the program PTIPR 116

3. Description of the program for solving integral equations of convolution type 122

3.1. Description of the program PTIKR 123

4. Description of the program for solving two-dimensional integral equations of convolution type 131

5. Description of the program for solving ill-posed problems on special sets. The method of the conditional gradient 139

5.1. Description of the program PTIGR 139

5.2. Description of the program PTIGR1 141

5.3. Description of the program PTIGR2 142

6. Description of the program for solving ill-posed problems on special sets. The method of projection of conjugate gradients 146

6.1. Description of the program PTILR 146

6.2. Description of the program PTILR1 147

7. Description of the program for solving ill-posed problems on special sets. The method of conjugate gradients with projection into the set of vectors with nonnegative components 153

7.1. Description of the program PTISR 153

7.2. Description of the program PTISR1 155

Appendix: Program listings 163

I. Program for solving Fredholm integral equations of the first kind, using Tikhonov's method with transformation of the Euler equation to tridiagonal form 163

II. Program for solving Fredholm integral equations of the first kind by Tikhonov's method, using the conjugate gradient method 177

III. Program for solving Fredholm integral equations of the first kind on the set of nonnegative functions, using the regularization method 183

IV. Program for solving one-dimensional integral equations of convolution type 188

V. Program for solving two-dimensional integral equations of convolution type 196

VI. Program for solving Fredholm integral equations of the first kind on the sets of monotone and (or) convex functions. The method of the conditional gradient 204

VII. Program for solving Fredholm integral equations of the first kind on the sets of monotone and (or) convex functions. The method of projection of conjugate gradients 209

VIII. Program for solving Fredholm integral equations of the first kind on the sets of monotone and (or) convex functions. The method of projection of conjugate gradients onto the set of vectors with nonnegative coordinates 221

IX. General programs 229

Postscript 235

1. Variational methods 235

2. Iterative methods 236

3. Statistical methods 237

4. Textbooks 237

5. Handbooks and Conference Proceedings 238
