Preface v

1 Elliptic Boundary Value Problems and FEM **1**
1.1 Elliptic Boundary Value Problems 1
1.2 Ritz-Galerkin Method 7
1.3 Finite Element Method (FEM) 10
1.4 Inverse Assumption 14
1.5 L^∞ Estimate 19
1.6 L^p Estimate 27
1.7 Asymptotic Expansion 35

2 Semigroup Theory and FEM **47**
2.1 Evolutionary Problems 47
2.2 Semi-discretization 53
2.3 Fractional Powers 58
2.4 Full-discretization 61
2.5 Inhomogeneous Equation 68
2.6 Higher Accuracy 70
2.7 L^∞ Estimate 77
2.8 Hyperbolic Equation 83

3 Evolution Equations and FEM **95**
3.1 Generation Theories 95
3.2 A Priori Estimates 108
3.3 Semi-discretization 118
3.4 Full-discretization 126
3.5 Alternative Approach 131

4 Other Methods in Time Discretization **145**
4.1 Rational Approximation of Semigroups 145
4.2 Multi-step Method 153
4.3 Product Formula 165

5 Other Methods in Space Discretization **171**
5.1 Lumping of Mass 171
5.2 Upwind Finite Elements 181

5.3 Mixed Finite Elements 182
5.4 Boundary Element Method (BEM) 190
5.5 Charge Simulation Method (CSM) 195

6 Nonlinear Problems **207**
6.1 Semilinear Elliptic Equations 207
6.2 Semilinear Parabolic Equations 211
6.3 Degenerate Parabolic Equations 217

7 Domain Decomposition Method **243**
7.1 Dirichlet to Neumann (DN) Map 243
7.2 Dirichlet to Neumann (DN) Iteration 246
7.3 Dirichlet^2 to Neumann^2 (DD-NN) Iteration 255
7.4 Robin to Robin (RR) Iteration 257
7.5 Exterior Problem 258
7.6 The Stokes System 261

Bibliography **275**

Index **303**
