

# CONTENTS

<b>1. Introduction</b>	<b>1</b>
1.1 A Sturm–Liouville Equation,	2
1.2 The Korteweg–deVries Equation,	4
<i>Single-Soliton Solution of the Korteweg–deVries Equation,</i>	7
1.3 Multisoliton Solutions as Bargmann Potentials,	8
<i>Linear Bargmann Potential—The Single Soliton,</i>	8
<i>Quadratic Bargmann Potential—Interaction of Two Solitons,</i>	9
1.4 A Physical System Leading to the Korteweg–deVries Equation,	13
1.5 Extensions to Other Nonlinear Equations,	20
1.6 A Preview,	21
<b>2. Topics in One-Dimensional Scattering Theory</b>	<b>22</b>
2.1 Waves on a String,	22
<i>Energy Flow on a String,</i>	23
2.2 Scattering by an Oscillator,	26
2.3 The Elastically Braced String,	29
2.4 The Schrödinger Equation,	33
2.5 Scattering by a $\text{sech}^2$ Potential,	34
2.6 Associated Sturm–Liouville Equations,	38
2.7 Two-Dimensional Waves in an Inhomogeneous Medium,	41
2.8 A General Approach to Scattering,	46
<i>Fundamental Solutions,</i>	47
<i>Wronskian Relations,</i>	47
<i>Poles of the Transmission Coefficient,</i>	50
<i>Relation between Transmission and Reflection Coefficients,</i>	55
<i>Asymptotic Solution,</i>	57
<i>Number of Poles of the Transmission Coefficient,</i>	59
2.9 Truncated Potentials,	60
2.10 Scattering of Pulses—Marchenko Equations,	62

- 2.11 Two-Component Scattering, 67  
*A Time-Dependent Problem*, 67  
*Fundamental Solutions*, 69  
*Wronskian Relations*, 71  
*Poles of the Transmission Coefficient*, 73  
*An Example*, 75  
*Asymptotic Solution*, 78  
*Truncated Potentials*, 78
- 2.12 Relation between One- and Two-Component Equations—  
 Riccati Equations, 80

### 3. Inverse Scattering in One Dimension

84

- 3.1 Relation between the Potential and the Functions  
 $A_R(x,y)$  and  $A_L(x,y)$ , 84  
*Example—Repulsive Delta Function Potential*, 86
- 3.2 The Presence of Bound States, 87  
*Example—Attractive Delta Function Potential*, 88
- 3.3 Reflectionless Potentials, 90  
*Example—The Case  $N=2$* , 92
- 3.4 Reflection Coefficient a Rational Function of  $k$ , 93
- 3.5 Bargmann Potentials, 96  
*Linear Case*, 97  
*Quadratic Case*, 97
- 3.6 Two-Component Inverse Method for Real Potentials, 99
- 3.7 Reflectionless Potentials for Two-Component Systems, 103
- 3.8 Reflection Coefficient for Two-Component System—A  
 Rational Function of  $k$ , 105
- 3.9 Two-Component System with a Complex Potential, 107  
*Asymptotic Solution*, 111

### 4. The Korteweg–deVries Equation

113

- 4.1 Steady-State Solution, 113
- 4.2 Results of Numerical Solutions, 115
- 4.3 Inverse Scattering and the Korteweg–deVries Equation, 118
- 4.4 Multisoliton Solutions, 121  
*Example—The Two-Soliton Solution ( $N=2$ )*, 122
- 4.5 Conserved Quantities, 126
- 4.6 The Initial Pulse Profile  $\delta'(x)$ —Similarity Solution, 128
- 4.7 Alternative Approach to the Linear Equations for the  
 Korteweg–deVries Equation, 131

<b>5. Some Evolution Equations Related to a Two-Component Linear System</b>	<b>133</b>
5.1 Modified Korteweg–deVries Equation, 134	
<i>The Linear Equations,</i> 135	
<i>Solution by Inverse Scattering,</i> 136	
<i>Breather Solution,</i> 138	
<i>Alternative Approach to the Linear Equations,</i> 142	
5.2 Sine–Gordon Equation, 143	
<i>Some Simple Solutions,</i> 144	
<i>Energy Considerations,</i> 150	
<i>Solution by Inverse Scattering,</i> 151	
<i>Two-Soliton Solution,</i> 153	
<i><math>\pi</math> Pulse and the Similarity Solution,</i> 153	
5.3 Cubic Schrödinger Equation, 155	
<i>Linear Equations,</i> 156	
<i>Solution by Inverse Scattering,</i> 156	
5.4 A General Class of Soluble Nonlinear Evolution Equations, 160	
<b>6. Applications I</b>	<b>169</b>
6.1 Shallow Water Waves and the Korteweg–deVries Equation, 169	
6.2 Shallow Water Waves and the Cubic Schrödinger Equation, 174	
6.3 Ion Plasma Waves and the Korteweg–deVries Equation, 178	
6.4 Classical Model of One-Dimensional Dislocation Theory—Sine–Gordon Equation, 182	
6.5 Choice of Expansion Parameters, 186	
<b>7. Applications II</b>	<b>190</b>
A SOLITON ON A VORTEX FILAMENT, 190	
7.1 Self-Induction of a Vortex, 191	
7.2 Motion of the Filament, 194	
7.3 Shape of the Single-Soliton Filament, 198	
7.4 Other Soliton Equations, 200	
COHERENT OPTICAL PULSE PROPAGATION, 204	
7.5 Description of the Electromagnetic Field, 205	
7.6 The Two-Level Atom, 206	
7.7 Equations of the Model, 209	

- 7.8 Stationary Atoms—Sine–Gordon Limit, 210
- 7.9 Moving Atoms and the Area Theorem, 214
- 7.10 Solution by an Inverse Method, 216
- 7.11 Propagation in an Amplifier, 221
- 7.12 The Two-Component Method, 227
  - Conserved Quantities*, 234
- 7.13 Level Degeneracy, 238

## 8. Bäcklund Transformations 243

- 8.1 Bäcklund Transformation for the Korteweg–deVries Equation, 243
  - Validity of the Theorem of Permutability*, 247
- 8.2 Bäcklund Transformations for Some Other Evolution Equations, 248
  - Example—The Sine–Gordon Equation*, 249
- 8.3 More General Bäcklund Transformations, 252
  - Example—Liouville’s Equation*, 254

## 9. Perturbation Theory 259

- THE KORTEWEG–DEVRIES EQUATION, 259
  - 9.1 Basic Equations, 259
  - 9.2 Perturbation of the Single-Soliton Solution, 262
    - Perturbation of Bound-State Parameters*, 263
    - Perturbations in the Continuous Spectrum*, 264
    - A Simple Procedure*, 269
- THE CUBIC SCHRÖDINGER EQUATION, 271
  - 9.3 Basic Equations, 271
  - 9.4 Damping of the Single Soliton, 275
