Preface xi

CHAPTER 1 A BRIEF HISTORY OF THE DEVELOPMENT OF FINITE ELEMENT THEORY 1

1.1 The Early Use of Finite Elements 1
1.2 A Modern Problem 3
1.3 The Matrix Force Method 3
1.4 The Matrix Stiffness Method 5
1.5 The Interim Period 5
1.6 Variational Principles and Finite Elements 9
1.7 Recent Developments 11
1.8 General Remarks 13

CHAPTER 2 STRUCTURAL ANALYSIS AND THE FINITE ELEMENT 19

2.1 Structural and Variational Motivation 19
2.2 Structural Analysis 20
2.3 A Simple Structural Problem 22
2.4 The Finite Element Solution Procedure 25
2.5 The Axial Stiffness Element 26
2.6 The Transformation Matrix 28
2.7 Assemblage Stiffness Equation 32
2.8 Internal Forces 36
2.9 General Solution Procedure 37
2.10 The General Continuum 39

CHAPTER 3 VARIATIONAL APPROACH TO FINITE ELEMENTS 43

3.1 Boundary-Value Problems and Variational Methods 43
3.2 A Structural Problem: The Axisymmetric Rod 46
3.3 Variational Derivation for the Axial Stiffness Element 48
3.4 One-dimensional Fluid Flow 65
3.5 Radial Heat Flow between Cylinder Walls 68

CHAPTER 4 FINITE ELEMENT METHODS IN THEORETICAL ELASTICITY 75

4.1 Variational Principles of Elasticity 75
4.2 Virtual Work 77
4.3 Principle of Virtual Displacements 78
4.4 General Form of the Element Stiffness Equation 82
4.5 Principle of Virtual Stress 98
4.6 Lagrange Multiplier Techniques and "Hybrid" Elements 100
4.7 Reissner's Variational Principle 108
4.8 Review of Variational Approaches 110

CHAPTER 5 HIGHER-ORDER AND REFINED ELEMENTS 118

5.1 The Finite Element Representation 118
5.2 The Axial Element with Strains as Generalized Degrees of Freedom 121
5.3 The Linear-Strain Triangle 123
5.4 Interpolation 125
5.5 Some Natural Coordinate Systems of Projective Geometry and "Shape Functions" 129

5.6 Elements of Complicated Shapes—The Isoparametric Elements 137
5.7 Element Assembly and Nodal Functions 142
5.8 Element Stiffness Formulation 145

CHAPTER 6 NONLINEAR THEORY: THE GEOMETRICALLY NONLINEAR PROBLEM 151

6.1 Origin and Nature of the Geometrically Nonlinear Problem 151
6.2 Geometric Stiffness for an Axial Element 154
6.3 Rod-Spring System 157
6.4 Stability 164
6.5 General Formulation of the Geometrically Nonlinear Problem 166
6.6 Geometric Stiffness for Other Elements 175

CHAPTER 7 INELASTIC PROBLEMS: NONLINEAR MATERIAL BEHAVIOR 184

7.1 Origin and Nature of the Physically Nonlinear Problem 184
7.2 Nonlinear Spring 185
7.3 Elastoplastic Analysis by the Finite Element Method 190
7.4 Elastoplastic Analysis of a Truss 193
7.5 Two-dimensional Element Formulations 197
7.6 General Formulation of the Physically Nonlinear Problem 199

CHAPTER 8 VARIATIONAL AND RESIDUAL METHODS 206

8.1 Calculus of Variations 206
8.2 Lagrange Multipliers and Constraints 213
8.3 Hamilton's Principle and Lagrange Equations 216
8.4 Approximate Methods 219
8.5 Finite Elements and Piecewise Interpolation 230

CHAPTER 9 ADVANCED TOPICS IN FINITE ELEMENT THEORY 243

9.1 Boundary- and Initial-Value Problems of Applied Mathematics 243
9.2 Classification of Boundary-Value Problems 244
9.3 Statement of the Variational Problem 246

9.4 Fluid Mechanics 251
9.5 Heat Flow and Wave Propagation 261
9.6 Torsion of a Hollow Prism 281
9.7 Elastic Vibrations 285
9.8 Plates and Shells 295

CHAPTER 10 NUMERICAL MATHEMATICS AND COMPUTER ANALYSIS 313

10.1 Computer Involvement in Finite Element Analysis 313
10.2 Anatomy of a Computer 314
10.3 Some Important Numerical Techniques 317
10.4 Error Analysis 340
10.5 Finite Element Computer Program 348
10.6 Data Processing in Finite Element Programs 353
10.7 Aids to Efficient Finite Element Analysis 358

APPENDIX A GENERAL THEOREMS AND PRELIMINARIES 365

APPENDIX B PLASTICITY 372
