## 1 Basic linear algebra

1.1	Introduction . . . . .	1
1.2	Notation . . . . .	2
1.3	Definitions . . . . .	2
1.4	Linear vector space . . . . .	5
1.5	Useful matrix properties . . . . .	7
1.6	Vector and matrix norms . . . . .	10
1.7	Theorems relating matrix norm to spectral radius . . . . .	13
1.8	Convergence of sequences of matrices . . . . .	15

## 2 Parabolic equations

2.1	Parabolic equations in one space dimension . . . . .	17
2.2	Derivation of an exact difference formula . . . . .	18
2.3	Explicit formulae . . . . .	19
2.4	Implicit formulae . . . . .	25
2.5	Solution of tridiagonal systems . . . . .	29
2.6	Convergence . . . . .	32
2.7	Stability . . . . .	34
2.8	Derivative boundary conditions . . . . .	39
2.9	Parabolic equations in two space dimensions . . . . .	44
2.10	Explicit methods . . . . .	46
2.11	Stability of explicit methods . . . . .	49
2.12	Alternating direction implicit (A.D.I.) methods . . . . .	50
2.13	Locally one-dimensional (L.O.D.) methods . . . . .	61
2.14	Connection between A.D.I. and L.O.D. methods . . . . .	65
2.15	Successive overrelaxation (S.O.R.) . . . . .	68
2.16	Parabolic equations in three space dimensions . . . . .	81
2.17	Explicit methods . . . . .	82
2.18	Implicit methods . . . . .	84
2.19	Three-level difference schemes . . . . .	87
2.20	Explicit schemes . . . . .	88
2.21	Implicit schemes . . . . .	90
2.22	Non-linear equations . . . . .	95

**3 Elliptic equations**

3.1	Elliptic equations in two dimensions	100
3.2	Laplace's equation in a square	101
3.3	A.D.I. methods	103
3.4	The Neumann problem	118
3.5	The third boundary value problem (Robbins problem)	125
3.6	Locally one-dimensional methods	131
3.7	Self-adjoint elliptic equations	132
3.8	General properties of difference formulae	141
3.9	Mixed partial derivatives	145
3.10	Laplace's equation in three variables	149

**4 Hyperbolic systems**

4.1	First-order hyperbolic equations	159
4.2	Explicit difference formulae	160
4.3	Implicit difference schemes	163
4.4	First-order hyperbolic systems in one space dimension	168
4.5	Variable coefficients	170
4.6	Stability	172
4.7	Systems of conservation laws	173
4.8	First-order hyperbolic systems in two space dimensions	176
4.9	The Lax-Wendroff method	177
4.10	Implicit methods	179
4.11	Variable coefficients	190
4.12	Conservation laws	190

**5 Hyperbolic equations of the second order**

5.1	Hyperbolic equations in one space dimension	192
5.2	Explicit difference methods	194
5.3	Implicit difference methods	201
5.4	Hyperbolic equations in two space dimensions	202
5.5	Explicit difference methods	203
5.6	Implicit difference methods	206
5.7	Stability	209
5.8	Alternative derivation of implicit difference formulae	211
5.9	Split operator methods	213
5.10	Locally one-dimensional (L.O.D.) schemes	216
5.11	Locally alternating direction (L.A.D.) schemes	218
5.12	Hyperbolic equations in three space dimensions	219
5.13	A.D.I. schemes	220
5.14	L.O.D. schemes	222
5.15	Final remarks	223

**6 Applications in fluid mechanics and elasticity**

6.1 Compressible flow . . . . .	225
6.2 Steady flow in two dimensions . . . . .	225
6.3 Rotational flow . . . . .	228
6.4 Unsteady flow . . . . .	229
6.5 Viscous flow . . . . .	232
6.6 Steady flow in two dimensions . . . . .	232
6.7 Unsteady flow in two dimensions . . . . .	233
6.8 Compressible viscous flow . . . . .	235
6.9 Boundary layer flow . . . . .	237
6.10 Incompressible flow in the boundary layer . . . . .	237
6.11 Compressible flow in the boundary layer . . . . .	241
6.12 The biharmonic equation . . . . .	242
6.13 Transverse vibrations of a uniform plate . . . . .	245
6.14 Stress equations of small motion . . . . .	247
