<i>Preface</i>	v
----------------------	---

Chapter 1. Algebraic Number Fields and Rational Approximation

§ 1.1. The units of algebraic number fields	1
§ 1.2. The simultaneous Diophantine approximation of an integral basis	3
§ 1.3. The real cyclotomic field	6
§ 1.4. The units of a cyclotomic field	8
§ 1.5. Continuation	15
§ 1.6. The Dirichlet field	22
§ 1.7. The cubic field	25
Notes.....	27

Chapter 2. Recurrence Relations and Rational Approximation

§ 2.1. The recurrence formula for the elementary symmetric function	28
§ 2.2. The generalization of S_n	29
§ 2.3. PV numbers	32
§ 2.4. The roots of the equation $F(x) = 0$	34
§ 2.5. The roots of the equation $G(x) = 0$	37
§ 2.6. The roots of the equation $H(x) = 0$	40
§ 2.7. The irreducibility of a polynomial.....	42
§ 2.8. The rational approximations of η, τ, ω	44
Notes.....	47

Chapter 3. Uniform Distribution

§ 3.1. Uniform distribution.....	48
§ 3.2. Vinogradov's lemma	48
§ 3.3. The exponential sum and the discrepancy	51
§ 3.4. The number of solutions to the congruence	54
§ 3.5. The solutions of the congruence and the discrepancy	57
§ 3.6. The partial summation formula	57
§ 3.7. The comparison of discrepancies	59
§ 3.8. Rational approximation and the solutions of the congruence	60
§ 3.9. The rational approximation and the discrepancy	61
§ 3.10. The lower estimate of discrepancy	64
Notes.....	68

Chapter 4. Estimation of Discrepancy

§ 4.1. The set of equi-distribution	70
§ 4.2. The Halton theorem	71
§ 4.3. The p set	79
§ 4.4. The gp set	82
§ 4.5. The construction of good points	85
§ 4.6. The \mathcal{R}_s set	86
§ 4.7. The η set	87
§ 4.8. The case $s = 2$	90
§ 4.9. The glp set	92
Notes	98

Chapter 5. Uniform Distribution and Numerical Integration

§ 5.1. The function of bounded variation	99
§ 5.2. Uniform distribution and numerical integration	102
§ 5.3. The lower estimation for the error term of quadrature formula	108
§ 5.4. The quadrature formulas	110
Notes	112

Chapter 6. Periodic Functions

§ 6.1. The classes of functions	113
§ 6.2. Several lemmas	115
§ 6.3. The relations between $H_s^{\alpha}(C)$, $Q_s^{\alpha}(C)$ and $E_s^{\alpha}(C)$	118
§ 6.4. Periodic functions	121
§ 6.5. Continuation	124
Notes	130

Chapter 7. Numerical Integration of Periodic Functions

§ 7.1. The set of equi-distribution and numerical integration	131
§ 7.2. The p set and numerical integration	132
§ 7.3. The gp set and numerical integration	137
§ 7.4. The lower estimation of the error term for the quadrature formula	142
§ 7.5. The solutions of congruences and numerical integration	143
§ 7.6. The glp set and numerical integration	146
§ 7.7. The Sarygin theorem	151
§ 7.8. The mean error of the quadrature formula	153
§ 7.9. Continuation	155
Notes	157

Chapter 8. Numerical Error for Quadrature Formula

§ 8.1. The numerical error	159
----------------------------------	-----

§ 8.2. The comparison of good points	162
§ 8.3. The computation of the η set	163
§ 8.4. The computation of the \mathcal{B}_s set	164
§ 8.5. Examples of other \mathcal{F}_s sets	167
§ 8.6. The computation of a <i>glp</i> set	168
§ 8.7. Several remarks	174
§ 8.8. Tables	177
§ 8.9. Some examples	178
Notes	182

Chapter 9. Interpolation

§ 9.1. Introduction	183
§ 9.2. The set of equi-distribution and interpolation	184
§ 9.3. Several lemmas	188
§ 9.4. The approximate formula of the function of $E_s^{\alpha}(C)$	190
§ 9.5. The approximate formula of the function of $Q_s^{\alpha}(C)$	193
§ 9.6. The Bernoulli polynomial and the approximate polynomial	196
§ 9.7. The \mathcal{Q} results	200
Notes	203

Chapter 10. Approximate Solution of Integral Equations and Differential Equations

§ 10.1. Several lemmas	204
§ 10.2. The approximate solution of the Fredholm integral equation of second type ...	207
§ 10.3. The approximate solution of the Volterra integral equation of second type	212
§ 10.4. The eigenvalue and eigenfunction of the Fredholm equation	214
§ 10.5. The Cauchy problem of the partial differential equation of the parabolic type ...	217
§ 10.6. The Dirichlet problem of the partial differential equation of the elliptic type ...	219
§ 10.7. Several remarks	222
Notes	223

<i>Appendix</i> Tables	224
