
CONTENTS

Preface	xiii
Notation	xvii
CHAPTER ONE INTRODUCTION AND PRELIMINARIES	1
1.1 What Is Numerical Analysis?	1
1.2 Sources of Error	2
1.3 Error Definitions and Related Matters	4
1.3-1 Significant Digits	
1.3-2 Error in Functional Evaluation	
1.3-3 Norms	
1.4 Roundoff Error	9
1.4-1 The Probabilistic Approach to Roundoff; A Particular Example	
1.5 Computer Arithmetic	12
1.5-1 Fixed-Point Arithmetic	
1.5-2 Floating-Point Numbers	
1.5-3 Floating-Point Arithmetic	
1.5-4 Overflow and Underflow	
1.5-5 Single- and Double-Precision Arithmetic	

1.6 Error Analysis	20
1.6-1 Backward Error Analysis	
1.7 Condition and Stability	22
Bibliographic Notes	24
Bibliography	24
Problems	24
CHAPTER TWO APPROXIMATION AND ALGORITHMS	31
2.1 Approximation	31
2.1-1 Classes of Approximating Functions	
2.1-2 Types of Approximations	
2.1-3 The Case for Polynomial Approximation	
2.2 Numerical Algorithms	39
2.3 Functionals and Error Analysis	42
2.4 The Method of Undetermined Coefficients	44
Bibliographic Notes	46
Bibliography	46
Problems	47
CHAPTER THREE INTERPOLATION	52
3.1 Introduction	52
3.2 Lagrangian Interpolation	54
3.3 Interpolation at Equal Intervals	56
3.3-1 Lagrangian Interpolation at Equal Intervals	
3.3-2 Finite Differences	
3.4 The Use of Interpolation Formulas	63
3.5 Iterated Interpolation	66
3.6 Inverse Interpolation	68
3.7 Hermite Interpolation	70
3.8 Spline Interpolation	73
3.9 Other Methods of Interpolation; Extrapolation	78
Bibliographic Notes	79
Bibliography	80
Problems	81

CHAPTER FOUR NUMERICAL DIFFERENTIATION, NUMERICAL QUADRATURE, AND SUMMATION	89
4.1 Numerical Differentiation of Data	89
4.2 Numerical Differentiation of Functions	93
4.3 Numerical Quadrature: The General Problem	96
4.3-1 Numerical Integration of Data	
4.4 Gaussian Quadrature	98
4.5 Weight Functions	102
4.6 Orthogonal Polynomials and Gaussian Quadrature	104
4.7 Gaussian Quadrature over Infinite Intervals	105
4.8 Particular Gaussian Quadrature Formulas	108
4.8-1 Gauss-Jacobi Quadrature	
4.8-2 Gauss-Chebyshev Quadrature	
4.8-3 Singular Integrals	
4.9 Composite Quadrature Formulas	113
4.10 Newton-Cotes Quadrature Formulas	118
4.10-1 Composite Newton-Cotes Formulas	
4.10-2 Romberg Integration	
4.11 Adaptive Integration	126
4.12 Choosing a Quadrature Formula	130
4.13 Summation	136
4.13-1 The Euler-Maclaurin Sum Formula	
4.13-2 Summation of Rational Functions; Factorial Functions	
4.13-3 The Euler Transformation	
Bibliographic Notes	145
Bibliography	146
Problems	148
CHAPTER FIVE THE NUMERICAL SOLUTION OF ORDINARY DIFFERENTIAL EQUATIONS	164
5.1 Statement of the Problem	164
5.2 Numerical Integration Methods	166
5.2-1 The Method of Undetermined Coefficients	
5.3 Truncation Error in Numerical Integration Methods	171
5.4 Stability of Numerical Integration Methods	173
5.4-1 Convergence and Stability	
5.4-2 Propagated-Error Bounds and Estimates	

5.5	Predictor-Corrector Methods	183
	5.5-1 Convergence of the Iterations 5.5-2 Predictors and Correctors 5.5-3 Error Estimation 5.5-4 Stability	
5.6	Starting the Solution and Changing the Interval	195
	5.6-1 Analytic Methods 5.6-2 A Numerical Method 5.6-3 Changing the Interval	
5.7	Using Predictor-Corrector Methods	198
	5.7-1 Variable-Order-Variable-Step Methods 5.7-2 Some Illustrative Examples	
5.8	Runge-Kutta Methods	208
	5.8-1 Errors in Runge-Kutta Methods 5.8-2 Second-Order Methods 5.8-3 Third-Order Methods 5.8-4 Fourth-Order Methods 5.8-5 Higher-Order Methods 5.8-6 Practical Error Estimation 5.8-7 Step-Size Strategy 5.8-8 Stability 5.8-9 Comparison of Runge-Kutta and Predictor-Corrector Methods	
5.9	Other Numerical Integration Methods	224
	5.9-1 Methods Based on Higher Derivatives 5.9-2 Extrapolation Methods	
5.10	Stiff Equations	228
	Bibliographic Notes	233
	Bibliography	234
	Problems	236
 CHAPTER SIX FUNCTIONAL APPROXIMATION: LEAST-SQUARES TECHNIQUES		 247
6.1	Introduction	247
6.2	The Principle of Least Squares	248
6.3	Polynomial Least-Squares Approximations	251
	6.3-1 Solution of the Normal Equations 6.3-2 Choosing the Degree of the Polynomial	
6.4	Orthogonal-Polynomial Approximations	254
6.5	An Example of the Generation of Least-Squares Approximations	260
6.6	The Fourier Approximation	263
	6.6-1 The Fast Fourier Transform 6.6-2 Least-Squares Approximations and Trigonometric Interpolation	
	Bibliographic Notes	274
	Bibliography	275
	Problems	276

CHAPTER SEVEN FUNCTIONAL APPROXIMATION: MINIMUM MAXIMUM ERROR TECHNIQUES	285
7.1 General Remarks	285
7.2 Rational Functions, Polynomials, and Continued Fractions	287
7.3 Padé Approximations	293
7.4 An Example	295
7.5 Chebyshev Polynomials	299
7.6 Chebyshev Expansions	301
7.7 Economization of Rational Functions	307
7.7-1 Economization of Power Series	
7.7-2 Generalization to Rational Functions	
7.8 Chebyshev's Theorem on Minimax Approximations	311
7.9 Constructing Minimax Approximations	315
7.9-1 The Second Algorithm of Remes	
7.9-2 The Differential Correction Algorithm	
Bibliographic Notes	320
Bibliography	320
Problems	322
CHAPTER EIGHT THE SOLUTION OF NONLINEAR EQUATIONS	332
8.1 Introduction	332
8.2 Functional Iteration	334
8.2-1 Computational Efficiency	
8.3 The Secant Method	338
8.4 One-Point Iteration Formulas	344
8.5 Multipoint Iteration Formulas	347
8.5-1 Iteration Formulas Using General Inverse Interpolation	
8.5-2 Derivative Estimated Iteration Formulas	
8.6 Functional Iteration at a Multiple Root	353
8.7 Some Computational Aspects of Functional Iteration	356
8.7-1 The δ^2 Process	
8.8 Systems of Nonlinear Equations	359
8.9 The Zeros of Polynomials: The Problem	367
8.9-1 Sturm Sequences	

8.10	Classical Methods	371
8.10-1	Bairstow's Method	
8.10-2	Graeffe's Root-squaring Method	
8.10-3	Bernoulli's Method	
8.10-4	Laguerre's Method	
8.11	The Jenkins-Traub Method	383
8.12	A Newton-based Method	392
8.13	The Effect of Coefficient Errors on the Roots; Ill-conditioned Polynomials	395
	Bibliographic Notes	397
	Bibliography	399
	Problems	400

CHAPTER NINE THE SOLUTION OF SIMULTANEOUS LINEAR EQUATIONS **410**

9.1	The Basic Theorem and the Problem	410
9.2	General Remarks	412
9.3	Direct Methods	414
9.3-1	Gaussian Elimination	
9.3-2	Compact Forms of Gaussian Elimination	
9.3-3	The Doolittle, Crout, and Cholesky Algorithms	
9.3-4	Pivoting and Equilibration	
9.4	Error Analysis	430
9.4-1	Roundoff-Error Analysis	
9.5	Iterative Refinement	437
9.6	Matrix Iterative Methods	440
9.7	Stationary Iterative Processes and Related Matters	443
9.7-1	The Jacobi Iteration	
9.7-2	The Gauss-Seidel Method	
9.7-3	Roundoff Error in Iterative Methods	
9.7-4	Acceleration of Stationary Iterative Processes	
9.8	Matrix Inversion	450
9.9	Overdetermined Systems of Linear Equations	451
9.10	The Simplex Method for Solving Linear Programming Problems	457
9.11	Miscellaneous Topics	465
	Bibliographic Notes	468
	Bibliography	470
	Problems	472

CHAPTER TEN THE CALCULATION OF EIGEN- VALUES AND EIGENVECTORS OF MATRICES	483
10.1 Basic Relationships	483
10.1-1 Basic Theorems	
10.1-2 The Characteristic Equation	
10.1-3 The Location of, and Bounds on, the Eigenvalues	
10.1-4 Canonical Forms	
10.2 The Largest Eigenvalue in Magnitude by the Power Method	492
10.2-1 Acceleration of Convergence	
10.2-2 The Inverse Power Method	
10.3 The Eigenvalues and Eigenvectors of Symmetric Matrices	501
10.3-1 The Jacobi Method	
10.3-2 Givens' Method	
10.3-3 Householder's Method	
10.4 Methods for Nonsymmetric Matrices	513
10.4-1 Lanczos' Method	
10.4-2 Supertriangularization	
10.4-3 Jacobi-Type Methods	
10.5 The LR and QR Algorithms	521
10.5-1 The Simple QR Algorithm	
10.5-2 The Double QR Algorithm	
10.6 Errors in Computed Eigenvalues and Eigenvectors	536
Bibliographic Notes	538
Bibliography	539
Problems	541
Index	549
