<b>Preface</b>	<b>vii</b>
<b>1 Introduction</b>	<b>1</b>
1.1 Rounding errors and instability	2
<b>2 Linear algebraic equations</b>	<b>8</b>
2.1 Gauss elimination	9
2.2 Matrix decomposition methods	16
2.3 Iterative methods	27
<b>3 Non-linear algebraic equations</b>	<b>43</b>
3.1 Bracketing methods	43
3.2 Fixed point iteration	50
3.3 Newton's method	57
3.4 Systems of non-linear equations	64
<b>4 Eigenvalues and eigenvectors</b>	<b>71</b>
4.1 The power method	72
4.2 Deflation	80
4.3 Jacobi's method	88
4.4 Sturm sequence iteration	97
4.5 Givens' and Householder's methods	102
4.6 The <i>LR</i> and <i>QR</i> methods	110
4.7 Hessenberg form	118
<b>5 Methods of approximation theory</b>	<b>129</b>
5.1 Polynomial interpolation: Lagrange form	130
5.2 Polynomial interpolation: divided difference form	138
5.3 Polynomial interpolation: finite difference form	145
5.4 Hermite interpolation	152
5.5 Cubic spline interpolation	159
5.6 Least squares approximation to discrete data	172
5.7 Least squares approximation to continuous functions	180
<b>6 Numerical differentiation and integration</b>	<b>190</b>
6.1 Numerical differentiation	191
6.2 Numerical integration: Newton–Cotes formulas	199

6.3	Quadrature rules in composite form	209
6.4	Romberg's method	215
6.5	Simpson's adaptive quadrature	221
6.6	Gaussian quadrature	227
<b>7</b>	<b>Ordinary differential equations: initial value problems</b>	<b>233</b>
7.1	Derivation of linear multistep methods	233
7.2	Analysis of linear multistep methods	244
7.3	Runge–Kutta methods	254
7.4	Systems and higher order equations	258
<b>8</b>	<b>Ordinary differential equations: boundary value problems</b>	<b>265</b>
8.1	The finite difference method	266
8.2	The shooting method	271
	<b>Appendix</b>	<b>277</b>
	<b>References</b>	<b>279</b>
	<b>Solutions to exercises</b>	<b>281</b>
	<b>Index</b>	<b>323</b>
