CONTENTS

Introduction and Historical Survey, by Claude Brezinski . . . IX
Presentation XVII
General Notation XX

Chapter 1
The Various Kinds of Algorithmic Sequence Transformations 1

Introduction 3
1 – Sequence Transformations 4
2 – Algorithms for Sequences and Algorithmic Transformations 6
3 – k-Normal Algorithms and k-Normal Transformations . . 14
4 – k-Memories Algorithms and k-Memories Transformations 18
5 – k-Stationary Algorithms and k-Stationary Transformations 23
6 – Rational Transformations and Linear Transformations . 25
7 – Diagram of Inclusions 27
References 28

Chapter 2
Decidability and Undecidability in the Limit 31

Introduction 33
1 – Definitions and the Normalisation Theorem 36
2 – Problems Concerning Convergence, Turbulence and Periodicity of Sequences 38
3 – Algorithms for Counting the Number of Accumulation Points 46
4 – Algorithms for Determining the Period of an Asymptotically Periodic Sequence 50
(a) Methods of Detector Coefficients 51
(b) Methods Using Barycenters 61
(c) Limitation Results 66
5 – Families of Sequences of Iterations 68
6 – Two General Results Concerning the Decidability in the Limit 77

Appendix 1 – Strength of an Accumulation Point and Quickness of a Sequence 80
(a) Strength of an Accumulation Point 80
(b) Quickness of a Sequence 82
Appendix 2 – Decidability in the Limit and Recursivity . . . 83
Appendix 3 – Decidability of the Convergence, Turbulence and Asymptotic Periodicity of a Continuous Function . . 85
References 88

Chapter 3
Algorithms for Extracting Convergent Subsequences 93

Introduction 95
1 – T-Algorithms 96
2 – S-Algorithms 109
3 – U-Algorithms 112
4 – Limitation Results 117
References 122

Chapter 4
The Partially Ordered Systems of Accelerable Families 125

Introduction 127
1 – Acceleration Velocity, Acceleration, Prediction 128
2 – Transformations for Convergence Acceleration, Accelerable Families 129
3 – Examples of Accelerable Families of Sequences 131
4 – Relationships Between the Ordered Systems of Accelerable Families 133
5 – Maximal Accelerable Families 143
References 148

Chapter 5
Non-Accelerable Families of Sequences 151

Introduction 153
1 – Remanence and First Applications 154
2 – Families of Monotones Sequences 163
3 – Alternating and Oscillating Sequences 169
4 – Families of Linearly Convergent Sequences 173
5 – Families of Logarithmically Convergent Sequences . . . 181
6 – Table of Results 186
References 187

Chapter 6
Accelerating the Convergence of Linear Sequences 191

Introduction 193
1 – Linearly Convergent and Periodico-Linearly Convergent Sequences 193
(a) Problems on Convergence 194
(b) Problems on Pseudo-Periodicity 201
(c) Applications 207
2 – Acceleration of Periodico-Linear Sequences 208
3 – Optimality of the Δ^2 of Aitken 213
(a) Algebraical Optimality 213
(b) The Impossibility of Enlarging Lin 214
(c) Acceleration of Degree 1+s on Lin 215
References 219

Chapter 7
Automatic Selection of Sequence Transformations 223

Introduction 225
1 – General Methods 225
(a) General Definitions for Selection Methods 225
(b) Two Results on Selection Methods 229
(c) Numerical Experiments 233
2 – Automatic Choice of Sequences of Parameters in the Richardson Extrapolation 236
(a) Exactness Properties of the Transformations Obtained from the Richardson Process 237
(b) Selection Among k-th Column Transformations . . 239
(c) Selection Among k-th Diagonal Transformations . . 243
(d) Selection Among Fast Diagonal Transformations . . 245
References 247
